Philosophy, Mythology and an African Cosmological System

By Dr. Amaechi UDEFI

University of Ibadan Ibadan, Nigeria

Abstract - There is a tendency by some scholars, especially those professional African philosophers who belong to the analytic school of African philosophy, to deny any relationship between philosophy, myth and cosmology. Their denial is based on their characterisation of philosophy as a rational and critical inquiry, while myth and cosmology are taken by them as belonging to the realm of stories, folktales etc. created by so-called primitive or traditional society to satisfy some emotional and instinctual need. Hence, they conclude that the concepts are unrelated. However, I shall argue that there is a deeper relationship between them than it is acknowledged since myth and cosmology constitute the raw material for philosophy. Again, both concepts offer a perspective for an interpretation of the world and the mysteries and phenomena of existence in general.

Philosophy, Mythology and an African Cosmological System

Dr. Amaechi UDEFI

Abstract - There is a tendency by some scholars, especially those professional African philosophers who belong to the analytic school of African philosophy, to deny any relationship between philosophy, myth and cosmology. Their denial is based on their characterisation of philosophy as a rational and critical inquiry, while myth and cosmology are taken by them as belonging to the realm of stories, folktales etc. created by so-called primitive or traditional society to satisfy some emotional and instinctual need. Hence, they conclude that the concepts are unrelated. However, I shall argue that there is a deeper relationship between them than it is acknowledged since myth and cosmology constitute the raw material for philosophy. Again, both concepts offer a perspective for an interpretation of the world and the mysteries and phenomena of existence in general.

I. Defining Philosophy, Mythology and Cosmology

a) Philosophy

It is pretty difficult to give a precise definition of philosophy as a discipline unlike what we see in some other disciplines like sociology, history, economics, physics etc where there is a kind of straightforward definitions of them. This perhaps accounts for the apparent disappointment of a student taking a first course in philosophy as to the lack of agreement in the definition of the subject by philosophers. However, saying this does not mean that it is impossible to articulate “ideas and attitudes that could be regarded as philosophical (Nwala, 1985, p.2)

a. Philosophy tries to understand the real nature of any given thing, facts, or events;

b. It understands the object in itself;

c. Hence, the goals of any philosophical system consist on the one hand the inculcation of habits of clear, exact logical and critical thinking a other hand the avoidance of blind indoctrin the adoption of a critical attitude towards issues in life.

d. Philosophy is a form of rational activity, a critical and conscious effort to understand the universe, its origins, nature and man’s place in it.

e. It is also a critical thinking about the concepts and principles we use to organise our experience in morals, in religion, and in social and political life, in law in psychology, in history, education and in the natural sciences (Sodipo, 1972, p.3)

What is obvious from the views articulated above is that philosophy is susceptible of two senses, one broad or general and the other technical or narrow. In the broad sense, philosophy is nothing more than world-view (Weitanschanung), culture, opinion, beliefs etc of an individual or a people. This sense of philosophy is captured by Nwala (1985:p.2) when he says:

Philosophy may mean a world-view..., that is, the basic beliefs which a people have or a person has about the origin, nature and of the universe, life or existence, whether the ideas are explicitly stated or implied in action stated in another ways, it could be basic ideas and beliefs which express a people’s or a person’s outlook in life.

In this case, every society has some philosophy since there is a stock of beliefs, ideas, opinions that is commonly shared by the people of a particular culture concerning man, society and nature.

In the technical or narrow sense, the practice of philosophy is now reserved for the professional philosophers who, in a critical and conscious manner, attempt to theorise about the world and reality. According to Kwame Gyekye, philosophy is essentially a rational, critical and systematic inquiry into the fundamental ideas underlying human thought, experience and conduct-an inquiry whose subject matter includes epistemological concepts and categories (Gyekye, 1995, p.4)

This technical sense is what Odera Oruka prefers to call “exact” philosophy (in opposition to ‘debased’ or diffused philosophy) where philosophy is a rational and critical reflection on man, society and nature (Oruka, 1972, p.7)

The two senses of the term-philosophy stated above chime with what W.E. Abraham, in his highly illuminating book, The Mind of Africa, calls a “public philosophy” and a “private philosophy”. According to him, the former is concerned with the traditional society and the laying-bare of the communal mind while the private philosophy is the thinking of an individual philosopher (Abraham, 1962, p.104)

b) Mythology

It is a difficult task to give a precise definition of myth because it is prone to many definitions and interpretations as there are myth analysts. In other words, each analyst or scholar tries to give a definition...
Philosophy, Mythology and an African Cosmological System

II. The Interplay of Philosophy, Mythology and Cosmology

The present day philosophy or art of philosophizing started from the speculations of the Greek poets in narrative forms or genres. Their endeavours sparked off the philosophical firmament in the Ionian philosophers towards a pursuit of systematic philosophic thought. Such philosophers include Thales, Anaximander and Anaximenes. These Ionians, who were also called cosmologists, made a remarkable contribution into philosophical thinking by delving into the origin of the whole world and the ultimate causes of things as did the poets that preceded them. Apparently amazed by the phenomena of birth and death, the movement of ocean, the amazing variety of things, the concept of time, the basic unity in the apparent diversity, they asked: what is the first principle from which all things draw their origin at birth and whence do they exist at death? That is, what is the original stuff that underlies the universe? The leading figure of Ionian philosophers was Thales, who posited that the ultimate constituent of the universe was water. According to him, water is the primordial substance underlying all things in the world. Understandably, Thales may have come to this conclusion because of the importance of water to the cosmogonic myths of the people or culture group.

Myths definitely do tell us about certain realities including religious truths, people’s understanding of them environment, their geography history, medicine and their social and political institutions could very easily be revealed in their myths (Metuh, 1999, pp. 27-28).

Thus myths are used to express the views of the people concerning the existence of man, gods, universe, their fears and aspirations in life.

c) Cosmology

The term is derived from the Greek (Kosmos) meaning world and (Logos) which means discourse. Then it can be defined as the study of the origin, structure and development of the world or universe in its totality. Again it can loosely be defined as that branch of metaphysics after ontology (which is the study of the meaning and nature of being), which treats of the universe as an ordered system. Nwala defines the term as:

… that framework of concepts and relations which man erects in satisfaction of some emotional or intellectual drive, for the purpose of bringing descriptive order into the world as a whole, including himself as one of its elements. The resulting cosmology will accordingly reflect the sociological, philosophical or scientific predilections of the individual and his group (Nwala, 1985, p.7).

Both cosmology and myths are related since they attempt to address through narratives, the problems bordering on the origin and nature of the world, man and existence generally. These cosmogonic myths have to do with the treatment of “the origin of the world and other phenomena” contained therein.
Miletians, who were largely sea-going fishermen and peasant farmers.

Also, Plato, like the Ionian philosophers before him emphasises the connection of myths and cosmology to philosophy. A perusal of the works, of Plato, especially the Republic and Symposium, will show how he uses symbols, allegories and legends to explain issues in knowledge, morals, politics, aesthetics etc. A clear illustration of the relationship between myths, cosmology and philosophy can be seen in the allegory of the cave, which Plato was to explain the distribution between appearance and reality.

The connection between these concept is reinforced by Inge (1936; p. 139) when he says;

*Myths... is an observation of things encumbered with all that they may suggest to a dramatic fancy. It is the common root and raw material of both poetry and science, and also of art. The Hebrew, who denied themselves a rich mythology, had no science or plastic art; the Greeks who indulged in... myths, were the founders of science and philosophy. Myth is the natural prologue to philosophy.*

Now, philosophy began in wonder and like cosmology and mythology concerns the basic beliefs of the people about the world, man and existence in their totality. Granted that myths and cosmology may be said to characterise traditional or primitive society, but saying so does not imply that such society is impervious to some sort of rational or philosophic elements no matter how rudimentary. If philosophy, in its broadest sense, is defined as world-view and as certain basic beliefs and conceptions about the world, man and existence, then it makes sense to say that traditional society possesses some philosophy.

According to Jacques Maritain, as quoted by Nwala:

*... some of the most elementary truths with which philosophy deals were known long before philosophy itself had come to birth, and the more important of these are to be found in a more or less rudimentary form...among all peoples of antiquity, event at the most remote epoch... (Thus) the primitive tradition has preserved for mankind throughout the ages a deposit...of fundamental truths. In this deposit...were included many philosophic conceptions* (Ibid, p.6).

It is obvious that what Jacques Maritain is alluding to here is the relationship between philosophy, folktales and cosmological systems of societies and the imperative need to abstract philosophy from the mass of deposits of such societies. Also, Nwala seems to subscribe to the above view when he says:

*If primitive societies could be said to possess cosmologies then there is also a sense in which we can rightly say that they too possessed philosophies. Cosmology...is an integral part of classical philosophy. Their philosophies may not be systematised as ours but philosophers can draw out or abstract this philosophy from the life, culture and institutions of the people* (Ibid, p.7).

The point being made here is that there is a thin line between philosophy, mythology and cosmology since both serve as a platform for the interpretation of man’s experience about reality. This is perhaps what Bolaji Idowu intended when he said:

*Myth (is) a vehicle conveying a certain fact or a certain basic truth about man’s experience in his encounter with the created order and with regard to man’s relation to the supra-sensible world* (Idowu, 1976, p.84).

Again there are some moral lessons to be drawn in both concepts, that is, through axiology and metaphysics, which are basic themes in philosophy, we learn about those intrinsic values which are the imperatives for a good life; the structure of the world; and the nature of being which are abstracted from myths, narratives that are immanent in Greek cosmology.

Still on the link between the concepts, Dipo Irele and Okpewho, among others, have argued for a complementarity between them rather than being seen as a kind of binary opposition to each other. Specifically, Irele contended, following the insights of some philosophers of science like Thomas Kuhn, Paul Feyerabend, Mary Hesse, for the revision of the view (Enlightenment) which tends to deny any rational contents to myths and other forms of knowledge other than science. According to him, Ifa- a literary corpus in Yoruba culture contains certain basic ingredients of scientific and philosophic thought namely; conceptualisation of phenomena of nature, abstract causal thinking and abstraction of contraries in nature (Irele, 1998, pp. 102-110).

Okpewho, on his part maintained that rationalisation and speculation which are the basic ingredients of philosophical activity are accounted for by the oral traditions, (Okpewho, 1981, p.44) contrary to the submissions of some scholars like Levy-Bruhl, Jack Goody, Karl Popper, Robin Horton, and Peter Bodunrin, Odera Oruka, among others, that literacy, criticism, argument etc are a pre-condition for a philosophic thought”.

### III. Igbo Cosmology

Let us suspend our argument above and turn attention to Igbo cosmology to buttress the point about the link between philosophy, mythology and cosmology. We argued above that traditional societies possess philosophy and traditional Igbo society is no exception to this, since it possesses not only philosophy, but also
there are "myths and ideas which embody and describe their cosmogony (Nwala, 1985, p.29).

IV. THE DUAL NATURE OF IGBO UNIVERSE

In traditional Igbo society, there is the belief that the universe is bifurcated into two, namely:

Elu – Igwe – sky
Elu-Uwa – (Ala) the Earth. The former is the abode of the spirits or supernatural entities- Ala-Mmuo and the latter is inhabited by human beings- Ala-Mmadu and other things like animals, plants, fishes, vegetables etc. it is also believed by the Igbo that the two worlds, though distinct, maintain a kind of correspondence or interaction with each other in order to guarantee social balance or order. This point is well taken by Mazisi Kunene as:

Common to all these bodies are two special laws (a) Continuous growth resulting in an expanding universe (b) The existence of cosmic boundaries enabling each entity to follow its own direction. A cosmic balance regulates all things from the smallest unit to the largest. The interplay among the cosmic entities aims at enriching each other (Kunene, 1980, pp.191-192).

The channel by which this is transmitted from one generation to another is through any of these:

Akiko - Ilo: Folktales, stories with songs during moonlight plays essentially for relaxation and entertainment with strong moral lessons.

Akiko - Gboo: Legends which are stories about the distant past.

Akiko - Odi-nala: Myths, i.e. narratives about tradition and customs, Omenala, ol ndi- Igbo-race.

The Igbo, for instance, can narrate how the world and man were created, through the platform of Akiko-ilo, (folktales) by saying that Chukwu-okike, Chineke (God the creator) created Uwa (world) and Mmadu (human being). The instruction by Chineke is that the world should provide a shelter or home for the human being and other things including plants, animals, vegetables etc. for consumption by man. What is of interest here is the philosophy underlying the story. The belief in a created universe is common to both the traditional society and finds supports or justification in the "creation stories in the Holy Books – Bible (Genesis) and the Qu’ran".

Again, the story attempt to explain the place of man in the cosmic order, putting him at the centre of the universe. In his interaction with other forces in nature, man recognises his freedom and the sacredness of himself, gods, earth and other things associated with spirits. It is important to mention that within the universe of forces, man is not subservient to the gods. For he “appeals to the gods only when he needs them and may choose to denounce them when they fail (Ibid, p. 199).

Thus, contrary to Popper, Horton and others who maintain that traditional society is characterised by an absence of alternatives to established authority and are largely conservative, the traditional society is as innovative, creative, dynamic as any other in so-called modern, societies. The tendency by some professional African philosophers to stress vigour and critical analysis as the essential hallmarks of philosophy seems presumptions. This is because they fail to understand there is a ‘critical’ as well as ‘narrative’ aspect of philosophy. The two aspects according to Richard Bell, (1989:p.364) are not mutually exclusive but are complementary.

According to Bell, Socratic philosophy is a typical example of both the critical and narrative aspects of philosophy. As he puts it.

Socrates as oral philosopher, makes his way into subsequent philosophical history independent of Plato as his critic and he gives shape to a distinctive philosophical style. Socrates was no only engaged in doing philosophy with his fellow citizens in the streets of Athens, but the very form of elenchus caught in his dialogues and the literary form of dialogue itself shaped the thought of socres of philosophers who followed him in a distinctly Socratic mode. (author’s. italics).

Within the context of traditional or non-literate societies both aspects are also found in the decisions and dialogue in their town hall meetings. For instance, if there is an impending war, the people usually rise up to the occasion by looking for solutions and strategies to either avert or prosecute the war. Whichever way the decision goes may have been arrived at through ‘critical dialogue’.

V. CONCLUDING REMARKS

We can now conclude by reiterating the point that there is a link between philosophy, mythology and cosmology, since in both there are certain assumptions and conceptions about the universe, life and existence in general. The characterisation of traditional society as ‘closed’ and conservative is an exaggeration because how the traditional man arrives at these assumptions and conceptions is not fortuitous but embodies some speculative elements based on the ‘exercise on reason’. These assumptions and ideas may not have been written down in terms of systematisation, but this should not diminish the meaningfulness and aesthetic value of oral tradition. We also argued that philosophy has both ‘critical’ and ‘narrative’ aspects and that they are not mutually exclusive.
