The Analysis of 'Pour': A Lesson Learned for Understanding Vocabulary

By Priyono

The University of Mataram, Indonesia

Abstract - The centrality of lexis has been a prominent issue in lexical studies in second language learning (Richards, 1976; Ard and Gass, 1987; Willis, 1990; Clark, 1993, Coady and Huckin, 1997). This research article aims to shed light on understanding vocabulary in a different perspective by examining the nature of vocabulary through the observation of the verb pour in corpus citations. The results indicate that a large part of the grammatical aspect is lexically related. The corpus citations display the properties of the verb pour that include its various senses of meaning, syntactic structures it can fill in, typical subjects and objects they co-occur with, and argument structures. These properties generally determine the verb meaning and how it should appear in sentences and collocate with other words, and at the same time distinguish from other verbs' behaviour. This corpus-based study confirms the unique complexity of the verb lexicon. The acquisition of lexicon is then the competence that includes the knowledge of the lexical properties. For a learner, it would imply that the encoded structural aspects should be learned as an integral part of learning vocabulary. Hence, it would render the teaching of grammar to some extent redundant.

Abstract - The centrality of lexis has been a prominent issue in lexical studies in second language learning (Richards, 1976; Ard and Gass, 1987; Willis, 1990; Clark, 1993, Coady and Huckin, 1997). This research article aims to shed light on understanding vocabulary in a different perspective by examining the nature of vocabulary through the observation of the verb *pour* in corpus citations. The results indicate that a large part of the grammatical aspect is lexically related. The corpus citations display the properties of the verb *pour* that include its various senses of meaning, syntactic structures it can fill in, typical subjects and objects they co-occur with, and argument structures. These properties generally determine the verb meaning and how it should appear in sentences and collocate with other words, and at the same time distinguish from other verbs' behaviour. This corpus-based study confirms the unique complexity of the verb lexicon. The acquisition of lexicon is then the competence that includes the knowledge of the lexical properties. For a learner, it would imply that the encoded structural aspects should be learned as an integral part of learning vocabulary. Hence, it would render the teaching of grammar to some extent redundant.

I. INTRODUCTION

Among the four parts of speech (noun, verb, adjective, and adverb), verbs turn out to have the most complex properties (cf. Kilby, 1984; Atkin, Kegl, and Levin, 1986 and 1988; Levin, 1993). From the semantic perspective, verbs often carry more than one meaning and fall into various semantic categories. From a syntactic perspective, there are lexical constraints in the syntactic structures in which verbs are the central element (see Ard and Gass, 1987). A lexical constraint is a rule that restricts verbs to behave in a peculiar way. Some verbs strictly require objects to express meaning in a sentence, some can only appear without objects, and others can appear with or without objects. Hundt (2004) points out that subject animacy is highly related to syntactic patterning, e.g. progressive mode is common with animate subjects. Verbs such as *break*, *cut*, *sell*, *read* may appear with both animate and inanimate subjects, but *write*, *eat*, *drink*, *see* with animate subjects only. The syntactic variants of a verb are also lexically constrained. For example, a verb like *give* can dative, as in *he gave me some money*, but a verb like *eat* cannot, **he ate me some sandwich*.

Likewise, the verb *break* can alternate to an unaccusative variant as in *the window broke*, but not *write* in **a novel wrote*.

Within lexical conceptual structure, verb properties would include meaning, syntactic constructions, collocation, morphological forms, phonological aspects, and pragmatic (but this corpus investigation restricts the observation area to the first three properties only). Therefore, verb is a strategic element in a grammatically acceptable sentence structure. The nature of the verb meaning determines how it should appear in syntactic construction and selects other syntactic elements to co-occur in a sentence. These elements can be its subjects and objects, and other collocations. In addition, animacy of subject and object is also an important factor contributing to the lexical properties of the verb. This collocational knowledge is an integral part of the acquired lexicon. With this in mind, the selected lexical item *pour* will be observed, analyzed, and discussed in relation to ESL (English as a Second Language) learning.

Knowledge about lexical properties should then be integral part of learner's lexical competence. With a verb, these properties would cover transitivity (whether the verb is strictly transitive or intransitive); whether the intransitive verb is ergative or unergative; the syntactic structures that the verb can enter into; the verb argument structures which include the typical subjects/objects of the transitive, or the typical subjects of the intransitive; the lexical and grammatical collocation of the verb; and the identification of the verb meaning (cf Grimshaw, 1990).

Priyono (2011) asserts that the above elements constitute a lexical conceptual structure suggesting that verb has inherent property encoding syntactic and semantic aspects. Although this may not be comprehensive, these elements make up the major properties that make the verbs difficult to learn (Ard and Gass, 1987; and Yip, 1994). The difficulty could be attributed to the inherent nature of the English verb lexicon and quite possibly interlanguage. Ard and Gass (1987), and Yip (1994) have found out that the English ergative verbs are troublesome even for advanced ESL learners.

II. THE OBSERVATION OF THE VERB *POUR*

The citations of the verb *pour* were obtained from the corpus compiled by Macquarie Dictionary Research Centre, Ozcorp. Set up by the Macquarie Library Pty Ltd in 1990, this corpus is constantly extended from a wider range of sources – novels, short stories, popular non-fiction books, poetries, magazines, newspapers, autobiographies, manuals/guides/handbooks, and even transcripts of spoken English, and more. This diversity provides sufficient generality and meets the requirement of this study in terms of being representative, and open-ended collection of texts. At that time, the size of the corpus was more than 20 million words, and currently must be much more than that. With all these features, the observation of the verb *pour* in the citations, is expected to disclose its properties. The programs employed are *Sentence*, *Concordances*, and *Collocation*. The *Sentence* program displays all sentences that contain the word under investigation and it provides relatively complete information about the word. *Concordance* is similar to *sentence* program but it does display complete sentences, many of them were truncated.

Table 1 : Frequency of transitive/intransitive uses

Transitive	210 (64%)
Intransitive	87 (27%)
Pure	69 (21%)
Pseudo	18 (5.5%)
Non-verbal (Excluded)	27 (8%)
Total occurrences	324

IV. THE TRANSITIVE *POUR*

The corpus reveals four variants of the transitive *pour*. The most common construction is POUR + NP + Prep + Location (Goal/Destination) (105 occurrences). The NP is the object, and Prep is prepositions, and the Location sometimes refers to Goal or Destination. The second common variant is Simple Transitive (70 occurrences). This variant is identified from the appearance of a single (direct) object. The third variant is Dative (21 occurrences), and the least common variant is Benefactive (10 occurrences). The following sentences will illustrate each of the transitive variants.

1. I could pour the diesel into the filters (#55).
2. she did pour a drink (#97).
3. will you pour me some more coffee ... (#143).
4. Denise will pour tea for all their family and friends (#206).

V. THE INTRANSITIVE *POUR*

Unlike the transitive, the intransitive use recognises only two variants: Pure and Pseudo

Therefore, *concordance* is not used to observe lexical behaviour of *pour*. *Collocation* program is useful in showing words that collocate with the verb *pour*. It also provides statistical information about frequency of words co-occurring with the verb *pour*. In addition, the results of *collocation* program display typicality of subject and object that help us understand the conceptual structure of the verb. As a whole the corpus citations of the verb *pour* demonstrate lexical behaviour that provide information regarding aspects of language such as syntax, meaning, and collocational properties.

III. SYNTACTIC INFORMATION

The verb *Pour* has both transitive and intransitive uses, but the transitive is much more common than the intransitive (see table 1 below). In addition there are more variants in the transitive uses. An example of each variant will be given later. The corpus also reveals other than verb uses. More than 6% of the 324 total matches are non-verb. This number includes the noun *pour* and foreign words such as *pour un jeune homme* [#81], *c'est tant pis pour lui* (#168), etc which must be excluded from the data.

intransitive. This is illustrated in the following sentences.

5. ... and rain began to pour down ... (#7).
6. Pour into a small serving dish, cover ... (#32).

The pure intransitive can be easily identified when the subject is inanimate such as *rain*, *water*, *liquid*, although quite a few animate subjects appear with this variant. Sentence 7 below is one of the pure intransitives in the citations with an animate subject.

7. About 500,000 East European were expected to pour into the West every year (#43).

Unlike 7, sentence 6 shows no object but implies one. In this sentence there is something to be poured into the dish. The entity is not expressed but understood from the context. On the contrary, the verb *pour* in 7 does not imply any object.

The subject of the transitive and intransitive

There are 62 sentences in the citations of *pour* that have no subject. These subjectless sentences are mostly imperative, but a few are due to truncation. Sentences 8 and 9 below illustrate the two instances.

8. Pour a thin layer of jelly on to the base of the mould (#42, also #32). implies an object. Except for pronoun and proper name, the list does not suggest any typicality of subject as the rest occur only once or twice. Such rarity of occurrence makes it difficult to characterise a common subject. However, there is a clear tendency for the subject of the transitive *pour* to be animate.
9. pour down my gullet huge draughts of spirit (#5).
 These subjectless sentences mostly occur in the transitive variant. The only other occurrences are in the pseudo intransitive as in 6, which nevertheless

Table 2 : Subject profile of transitive *pour*

Pronouns	132
Proper names	12
Father	2
Each of the following occurred once: sea, bosses, companies, 22-year-old, the plant, rhymester, the throat of the bird, butler, workmen, mother, grandfather, women, sweeper, entity, councilor, the rest of us, mummy.	17
Unidentified subjects	47
Total occurrences	210

Consider the following sentences.

10. It was as though a sea, breaking against a stone wall, had found some breach through which to pour its waters (#3).
11. The plant, in Fukushima district north-west of Tokyo, activated an emergency core cooling system to pour water on the nuclear fuel rods (#44).
12. Foreign-owned companies supplied thousands of Australian jobs and pour millions into the local economy (#26).

The subject *sea* of sentence 10, although an inanimate, is used metaphorically as an animate. This subject plays an agentive role, namely, the doer of the

action 'pouring'. In sentences 11 and 12, the subjects *plant* and *companies* involve human so that they can be categorised into animate subjects.

Unlike the transitive variants, the intransitives display a much greater range of inanimate subjects. Table 3 below lists the intransitive subjects from which the typical subjects can be identified. The ones which have similar characteristics can be categorised under one common term. For example, the nominal groups *water, rain, saliva, liquid, tears, chemicals, shower heads* etc. can be listed under 'liquid'. These nominal groups seem to have characterised the common subject of the intransitive *pour*.

Table 3 : Subject profile of intransitive *pour*

Pronouns	16
water	5
Rain	4
Smoke	2
Poems	2
Guests	2
Each of the following occurred once: saliva, words, liquid light, greetings, driver, investors, Europeans, rollers, young hearts, people, heat & sweetness, cascades, beams of light, all, moth, ideas, tears, councilor, Lennie, soldiers, wishes, chemicals, folk, events, immigrants, Chinese, sunshine, question, span, settlers, plains, showerheads, homage, libation, nations, throat.	36
Unidentified subjects	20
Total occurrences	87

The following sentences illustrate the common subjects of the intransitive *pour*.

13. Then the rain started to pour down (#46).
14. and opening his mouth let his saliva pour on to his slate (#6).

15. for the ceiling to rumble and the water to pour down (#203).
16. The shower heads continued to pour (#314).
17. but the tears began to pour for (#157).

The other nominal groups are non-liquid, but they have the similar characteristics in the manner described in the CCEED (Collin Cobuild Essential English Dictionary), that is, *flowing quickly and in large quantities*. These nominal groups among others are *words, smoke, greetings, immigrants, question*, and have also characterised the typical subjects of the intransitive *pour*. These are illustrated in the following sentences.

18. words began to pour from his lips ...(#12).
19. ... smoke continued to pour from their cigarettes (#14).
20. About 300 greetings pour in daily from ... (#27).
21. ... while immigrants pour in and take jobs and eat into social services (#222).
22. He scribbles all the while that the questions pour from him (#240).

VI. THE OBJECTS OF THE TRANSITIVE *POUR*

The examination of the verb *cook*, (Priyono, 2011) has shown that the subject of the intransitive often corresponds to the object of the transitive. This verb turned out to show similar behaviour. For example, the nominal *water* is the second most frequent subject of the intransitive as well as the object of the transitive *pour*. Both are listed immediately after Pronoun, the first subject in frequency (see tables 3 and 4). However, the remaining nominals do not show any significant correlation. For example, the nominal *tea* is the third common object, but does not exist on the list of the intransitive subject. And the nominal *rain* is a common subject of the intransitive but occurs only once as an object of the transitive with different kind of meaning.

Table 4 : Object profile of transitive *pour*

Pronouns	70
Water	21
Tea	18
Drink	9
Wine	8
Reflexive pronouns	7
Beer	5
Money	4
Oil	4

<i>Each of the following occurred once :</i>	
Spirit, millions, juices, batter, energy, jelly, song, diesel, faith, plastic, mayonnaise, shit, fear, life, tale, questions, hatred, woes, story, rum, poison, vials, rain, blessings, disinfectant, sherry, contents, acid, whole being, fish, cocoa, wax, troubles, syllables, solder, treacle, resin, sugar, bottle, glasses, marinade, treasure, pounds.	43
Total occurrences	210

- Compare the following sentences with *rain* in each.
23. ... the wind rose and rain began to pour ...(#7).
24. ... so that he can pour his rain down... (#100).

While *rain* in 23 has a concrete meaning, in 24 it has a metaphorical meaning. Also the nominal *words* showing in the list of intransitive subject does not

appear on the list of object of the transitive. In spite of the difference, however, both show similar general characteristics. The typical subject of the intransitive has been identified under the category 'liquid' and so is the object of the transitive. The later can be specified into two different categories. The first is drinkable and the second non-drink liquid. Under the first category, the

nominal groups include *water, tea, wine, beer, milk, whisky, coffee, brandy, juices, and cocoa*. The second includes *oil, diesel, poison, acid, mayonnaise, disinfectant*.

VII. OTHER SYNTACTIC INFORMATION

The other syntactic information provided by the corpus relates to the use of the verbal phrase *to pour*. There are 100 occurrences of this verbal phrase in the total 324 matches or 31%. The most common verbs that form the verbal phrase *to pour* are *begin/start, continue, want, try*, etc. These are illustrated in the following sentences.

- 25. ... the rest of us began to pour drinks ... (#20).
- 26. ... the water starts to pour (#70).
- 27. ... she continued to pour out on her ... (#253).
- 28. ... Mab wanted to pour sacrificial ... (#166).
- 29. Saul Hardy tried to pour oil ... (#130).

Quite often *to pour* is used with some verbs to express a purpose of an activity. Sentences 30 and 31 below illustrate this variant.

- 30. ... and went inside to pour another ... (#53).
- 31. ... working from the drawings makes molds to pour molten plastic into (#61).

This verbal phrase also appears as a complement of the linking verb *be* as in the followings.

- 32. ... all I had to do was to pour the water...(#57)
- 33. ... his only motive ... was to pour more...(#126)

As the complement of a passive verbal:

- 34. ... East Europeans were expected to pour into the West ... (#43).
- 35. The women are advised to pour this ... (#310).

As part of the complement of preposition *for*:

- 36. We wait for your money, for Timoshenko, for night for morning, for the ceiling to rumble and the water to pour down (#203).
- 37. ... 29 billion airport would go ahead was the signal for overseas investors to pour into (#39).

Grammatical collocation (The Prepositions after *Pour*)

There are 15 different prepositions occurring after the verb *pour*. Most of these prepositions except *away, upon, with, to* co-occur quite frequently with *pour*. Among the seven most frequent prepositions are *into, out, in, over, on, down, and for* (see table 5 below).

Table 5: Occurrence of prepositions after *pour*

Into	58
Out	43
In	34
Over	41 24
On	17
Down	13
For	11
From	9
On to	8
Through	5
To	2
Away, upon, with (once respectively)	3
Total	227

These grammatical collocations constitute lexical properties of the verb *pour* together with semantic, and syntactic properties.

The verb argument structure of *pour*

In the following section, we will report on an analysis of the conceptual structure of the verb *pour* that appears with the seven most frequent prepositions. The examination has yielded the following configuration.

Pour : [SUBJ], [OBJ], [SOURCE], [LOCATION]

This argument structure of the verb *pour* is well represented in sentence 38 below.

- 38. The mother frowned and got up to pour water from the big black kettle into the small brown teapot (#1).

In this sentence, we find the Subject argument *mother*, the Object *water*, the Source *kettle* as indicated by the preposition *from*, and the Location [or Goal/Destination] *teapot* signaled by the preposition *into*. But this might just be the ideal form of representation (cf. Rappaport, Laughren, and Levin 1987; Zubizarreta, 1987). As is evident from the citations, some of these arguments are often optional on

⁴¹ This includes the ones in which the phrase is separated by an object, for example, *pour something over...*

the surface level. Consider the following sentences illustrating the verb with *into*.

39. ... or I will pour it into the ground (#15).
40. Do not just pour money into inadequate road (#18)
41. Pour into a small serving dish, cover and chill 30 minutes (#32).

These sentences show that some of these arguments can be unexpressed. In 39 the Source is not expressed but the Subject, Object, and Location are explicit. In 40 the Subject and the Source do not show up. Sentence 41 likewise has no Subject, Object and Source. The absence of such arguments on the surface structure does not mean the same thing in the mind of the speaker. A larger context in which the verb *pour* occurred would suggest that a sentence such as 39 has something to be poured into, and that sentence 40 has somebody [Agent] to do the pouring, and sentence 41 implies an Agent to do the pouring, and a Source from which the implied object/entity is poured into the Location *serving dish*.

The examination of the preposition *out* shows different lexical behaviour. Location which is obligatory after *into*, is lacking in *pour out*. Let us have a look at the following data.

42. ... he'd pour the water out of the tubs (#11).
43. ... Albert would pour out his questions...(#88).
44. He had answered very little, choosing to light a cigarette and pour out another drink ... (#92).
45. ... my poems simply pour out of me (#107).

None of the four sentences above express any sign of Location as signaled by *pour into*. In 42 all the three arguments Subject, Object, and Source are explicit. In 43 the Subject argument and the Source conflate. Sentence 44 is the instance where the Source is unexpressed while the Subject and the Object arguments are explicit. And sentence 45 displays the intransitive *pour out* where only the Subject and the Source are expressed.

Appearing with preposition *in*, the verb *pour* demonstrates the same argument structure as *pour into* in that there are Subject, Object, Source, and Location arguments. On the surface level, however, *pour in* shows different syntactic structures. Seven different patterns have been identified as follows:

- S = Sentence has Subject argument only
O = Sentence has Object argument only
SO= Sentence has Subject and Object arguments
SS = Sentence has Subject and Source arguments
OL = Sentence has Object and Location
SOL= Sentence has Subject, Object, and Location

SOOL= Sentence has Subject, Object1, Object2, Location

These are illustrated in the following sentences.

46. ... while immigrants pour in and ... (#222).
47. Pour that in (#262).
48. ... the overseas bosses pour money in ... (#13).
49. ... 300 greetings pour in daily from around the world (#27).
50. Pour the water and the champagne in a pan...(#41)
51. Now you can pour that sugar in there (#266).
52. If you'll just pour me a nip in the glass...(#115)

Sentence 46 illustrates a sentence that has a Subject only. The absence of object is related to the intransitive use of *pour in*. The Source and the Location do not appear but the sentence implies both. In 47 only the Object pronoun *that* appears. Sentence 48 has an Object and Subject but the Source and Location are unspecified. The intransitive *pour in* of 49 has a Subject and a Source but the Location is unspecified. The imperative *pour* in 50 contains an Object and a Location but lack of Source. Sentences 51 and 52 contain relatively complete arguments but still lack Source.

Pour over exhibits similar syntactic structures to *pour in*, except that some patterns such as S, SO, SS do not appear in the *pour over* construction. The patterns shared by the two constructions are the following.

53. ... pour boiling water over ... (#212) (cf. 7.47)
54. ... and pour some more marinade over chicken... (#307) (cf. 7.50)
55. I pour some of the hot water over a tea bag (#236) (cf. 7.51).

Yet a further comparison between *pour in* and *pour over* displays different lexical behaviour. Consider the following sentences.

56. ... so you can pour in the liquid (#28).
57. ... pour in the wine and ... (#305).
58. Pour evenly over vegetables (#30).
59. Pour over the salad just before the dressing is added (#64).

In 56 and 57, *the liquid* and *the wine* are clearly the objects of *pour*, but in 58 and 59, *vegetables* and *the salad* are the locations. Sentences 56 and 57 are therefore identical with sentence 60 below.

60. Now you pour the milk in (#264).

Accordingly 56 and 57 can be altered to:

- a. so you can pour the liquid in.
b. pour the wine in.

The same alternation is not likely to apply to 58 and 59. With reference to sentence 53, we could expect to find that sentences c and d below can be the paraphrase of 58 and 59.

c. Pour evenly vegetables over.

d. Pour the salad over....

In which case *vegetables* and *salad* are no longer the location but the objects of the verb *pour*, with a new Location as yet unstated.

With the preposition *on*, the verb *pour* mostly occur in SOL construction where the Source is unspecified. This is illustrated in sentences 61 and 62 below.

61. Saul Hardy tried to pour oil on the troubled waters (#130).

62. ... as they're ready to pour some of the concrete on one of the deck ... (#242).

Some of these *pour on*-construction have no subject, or location unexpressed as in the following sentences.

63. Pour it on (#75).

64. I'll pour that stinking oil on... (#147).

And like *out*, *in*, and *over*, the preposition *on* also appears both separated or unseparated as in 65.

65. He'd throw the leaves directly into it, pour on the boiling water, (#134).

Similar constructions are shown with the preposition *down*. Three constructions have been identified as S, O, SOL.

66. ... the rain started to pour down and ... (#46).

67. pour down my gullet huge draughts of spirit (#5).

68. I should pour disinfectant down my sink... (#121).

Among the three, the SOL illustrated in 68 is the most common construction.

The last of the seven most common prepositions is *for*, where all structures but one exhibit Benefactive construction. Some are illustrated in 69, 70, 71, and the non-Benefactive in 72.

69. Pour for yourself (#114).

70. Don't pour another for me (#116).

71. ... and Denise will pour tea for all their family and friends (#206).

72. ... but the tears began to pour for the image of a husband (#157).

The three Benefactive constructions (69, 70, and 71) differ in that 69 does not specify its object and state explicitly its subject; 70 shows its object but does not specify its subject; 71 expresses all subject, object, and the Beneficiary. One common thing shared by the three and the non-Benefactive construction is the fact that the preposition *for* does not express Location as well as Source.

VIII. FINDINGS AND CONCLUSION

The citations of *pour* show considerably more transitive than intransitive uses. 210 out of 324 (64%) matches occur as transitive verb, compared to 87 (27%) intransitive. And it should be noted that 18 occurrences out of 87 are the so-called Pseudo intransitive, the kind of intransitive that on the surface implies an object. This reduces the number to 69 (21%) occurrences as pure intransitive.

From the occurrences of both transitive and intransitive, a conceptual structure of the verb *pour* can be developed. The verb is conceived to have four arguments: [SUBJ], [OBJ], [SOURCE], [LOCATION]. These four arguments may not be explicit on the surface structure. The Subject argument, for example, tends to be absent in an imperative statement (see sentences 7.58, 7.59, 7.63, 7.70). The Object argument appears in the transitive only but implied in pseudo intransitive. The Source argument, on the other hand is never apparent unless signaled by a preposition such as *into*, *in*, *on*, *down*, *over*. These are among the seven most frequent prepositions, and their existence has a clear syntactic role.

However, not all the seven preposition show a clear syntactic role. *Out*, for example, which is the second most frequent preposition, does not always show a clear function in a sentence. Consider the following sentences.

73. She turned to pour out another cup of tea... (#139)

74. ... we will give you tea and come and pour it out for you (#93).

75. ... he'd pour the water out of the tubs (#11).

76. ... as she did pour a drink, (#97).

77. She would perch on his knee and pour whisky without measuring it, (#108).

The absence of preposition *out* in 76 and 77 would raise some questions regarding the role of that preposition in those sentences. The first question is whether *out* in 73 - 75 is obligatory. With the evidence of 76 and 77, for sentences 73 and 74 the answer is no. If so, what is then the syntactic role of *out* in sentences 73 and 74? The last question is whether *to pour out another cup of tea* (73) is different from *to pour another cup of tea*. There seems to be no problem with this. But sentence 75 does not show a similar case.

78. a. ...he'd pour the water out of the tubs.

b. ...he'd pour the water of the tubs

Sentence 78b does not seem to be the same case as the omission of *out* in *to pour out another cup of tea*. As such counter-evidence (78b) is not found in the citations we have a good reason to be doubtful

about accepting its grammaticality. Therefore, it can be argued that *out* in 75 is obligatory while in 73 - 74 is optional.

Anyway, with all these evidences we can claim that these prepositions together with the syntactic constructions, argument structures, meanings, the typicality of subjects and objects that appear with *pour* are built-in properties of the verb *pour*. These properties are all linguistic aspects (grammar, meaning, morphologic, syntax, etc) that form its idiosyncratic behaviour. Some of these properties may be shared by other verbs but they are clearly distinctive.

The analysis of the conceptual structures of the verb *pour* has demonstrated that the built-in lexical properties are the determinant factors for the verb to behave syntactically. We have seen how the verb *pour*'s behaviour in terms of certain syntactic structures it can fill in; collocational properties that show typical words frequently co-occur with, and the verb argument structures that describe the conceptual meaning of the verb *pour*. These are the determinant factors that make the verb behave uniquely and display special characteristics distinguishing from other verbs. For example, the verb *pour* is different from the verb *cook* in taking arguments and lexical as well as grammatical items to co-occur with. The argument structure of *pour* involves [SUBJ], [OBJ], [SOURCE], [LOCATION], but that of *cook* misses the last two ...[SOURCE and [LOCATION]. The typicality of subjects and objects that forms lexical collocation, and the co-occurrence of function words (prepositions) that forms grammatical collocation also demonstrate significant differences (see Tables 3, 4, 5 and Priyono, 2011). Above all, the most important linguistic phenomenon that can be seen from this study is that a large part of grammar is encoded in the lexicon (see Priyono, 2005). The citations of the verb *pour* have indicated that grammatical relations (Subject, Predicate, Object), syntactic alternations, collocations and so on, should be viewed as lexical rather than grammatical issues. In other words, the availability of syntactic constructions are highly lexically constrained. The syntactic properties of the verb *pour* are evident that only verbs with such distinctive properties can enter into certain syntactic constructions. For example, the verb *cook* is different from the verb *cost* (among other differences) in that the former can enter into Benefactive construction while the latter cannot. So, it is good to say: *She cooked some dinner for me last night*; but not: *The dinner cost some money for me*. Obviously the syntactic structures that a verb can fill in must be due to its lexical properties.

The observation of the verb *pour* through the corpus citations provides evidence that the verb behaviour is obviously idiosyncratic. By this knowledge, we have opened another perspective of understanding vocabulary. This view suggests that vocabulary,

particularly the English verb lexicon is an essential part of learning English and that lexical knowledge covers a large part of grammar that is how a word should appear in certain syntactic structures (syntactic properties) or co-occur with other words (collocational properties). When someone claims to have known the word, his or her acquired knowledge ideally includes the ability to articulate, recognize the form, identify the meaning, use it in acceptable sentence constructions, select other words that are possible to collocate with, and use it properly in a given social context. The ideal lexical acquisition then should reduce the formal teaching of grammar which has dominated the EFL (English as a Foreign Language) instruction. Although it does not mean to endorse a total elimination of grammar, the findings should acknowledge the centrality of lexicon language learning. In other words, a large part of what seems to be a problem of learning grammar is lexically based. If syntactic and semantic properties are built into the lexicon, the lexical knowledge which includes these properties will help learners deal with their learning problems, problems which were previously conceived as problem of learning grammar (cf. Jiang, 2004).

These findings also suggest that learning a language is essentially learning vocabulary. In further investigation of this domain, it would be advisable to examine more verbs of high frequency of occurrence and other parts of speech as well, to identify which parts of the grammar area should be incorporated into the learning of vocabulary. In an ESL perspective, a lexical contrastive analysis could be developed to compare the lexical conceptual structure of the English language with that of the learner's native language. By this means it may be possible to predict the areas of difficulties, based on the differences or similarities between the two languages.
