Dance Play Method: A Strategy for Teaching Emotionally Challenged Primary Schools Children in Cross River State, Nigeria

By Egaga Patrick I. & Arikpo Ikpi A.

University of Calabar, Nigeria

Abstract- Most school children who are emotionally challenged are often stigmatized and left abandoned by their teachers and classmates. Although Federal Legislation (e.g., Americans with Disabilities Act of 1990) protects the inherent rights of individuals with emotional challenges and disabilities, that legislation cannot always protect them from subtle forms of discrimination and prejudice. This paper clearly point out the undisputable place of dance play method as a strategy for helping children who are emotionally challenged. School counselors, administrators, and teachers have a unique opportunity to directly address emotionally challenged children by providing organized, enjoyable dance and movement activities in a supportive environment and helping students gain better body control and develop nonverbal and social skills. This paper examined the place of the teacher as dance educator to have insights into these learner's abilities and effectively guide the children overcomes their emotional challenges in the school.

Keywords: *dance play method, strategy, emotionally challenged, primary schools children.*

I. INTRODUCTION

Teaching method is an eclectic method comprising and combining all the principles and methods used for instructing school children. It is implemented by teachers to achieve the desired learning in students. These strategies are determined partly on subject matter to be taught and partly by the nature and peculiarity of the learner. For a particular teaching method to be appropriate and efficient it has to be in relation to the characteristic of the learner and the type of learning it is supposed to bring about. The design and selection of teaching methods must take into account not only the nature of the subject matter but also how students learn (Petrina, 2007). Dance play teaching methods presents a conceptual model of dance education that embraces dance as an art form and disseminates it through learning experiences in dancing, dance making, and dance appreciation. Throughout the world children play is such an important part of teaching, this is because it conditions the harmonious physical, intellectual and affective development of a child. A child who does not play is a

sick child. A child who is prevented by his teacher or guardian from playing will fall ill, physically and mentally. Little wonder the notion "all work without play makes Jack a dull boy". Dance play is one of the most important of all educational activities and deserves acknowledgement of its rightful place in formal schooling, beyond the nursery school to which it is too often confined. Dance play provides the teacher not only with a way of improving his knowledge of the child, but also with a means of renewing his teaching methods.

II. STATEMENT OF THE PROBLEM

Emotionally disturbed children serious threats to their own development and the development of other children around them. Sometimes they are withdrawn hyperactive reclusive etc. Emotionally challenged learners may lack nonverbal academic readiness skills needed to productively engage in learning activities. Children who lack these skills may have emotional challenges in concentration and self-control that may result in behaviors such as jostling and disturbing others when lining up or receiving instruction on the rug. For these children, dance activities can offer a productive entry point for addressing their growth as learners, and an opportunity for them to experience success in school. This paper is geared to address the place of dance play as a strategy for helping students who are emotionally challenged.

II. PSYCHOLOGICAL FUNCTIONS AND THE ROLE OF DANCE PLAY IN THE CLASSROOM

Various psychological approaches appreciate the role of the dance in the development of the individual psyche play is a functional relaxation activity or, again, a way of using up excess energy that cannot, or can no longer, be absorbed for survival. A certain form of play is indissolubly linked with each stage of development, and although the rate or age at which various games appear may vary from one society to another or one individual to another, the order in which they appear is always the same. Play is a yardstick of a child's mental development.

Dance play is an integral part of education; it is accepted and encouraged or alternatively rejected as an

e-mail: arikpoikpi@yahoo.com

obstacle to the children's productive capacity. Whatever a society's is, play is an essential role in education. It may even be said that play is an education in itself outside the school. Play activities and materials are the best way for a child to express himself and the best testimony by which the adult can attempt to understand him; and on the other, they can serve as a basis for the teaching methods and techniques which the adult wishes to devise for the child with whose education he has been entrusted. For it would seem only natural that play should have its place in the classroom. For the teacher, dance play is one of the best ways of getting to know a child who is emotionally challenged, both as regards his personal psychological make-up and his cultural and social background. By observing a child at play, it will be possible to detect the appearance of affective, psychomotor or intellectual disorders in his development, identify what stage of mental development he has reached which will have to be borne in mind if the learning methods employed are to be improved upon. This will also expose which methods are most likely to succeed in the classroom communication process. Or even dictate placement alternatives for the child in the classroom.

Observation shows that communication between pupils, or between the teacher and his pupils, is established through dance play, where verbal communication may have failed. Dance play provides a release from the pressure of *school*. Having acquired the conviction, therefore, that play is a vital need for a child, that it is at once a 'preserve' apart and the foremost educational institution, teachers will begin by acknowledging the legitimate importance of dance play method, before even contemplating ways of incorporating it into their teaching.

To effectively adopt dance play method of teaching the teacher should bear in mind that; the effective utilization of dance/play method with emotionally disturbed learners must flexibly involve:

- Exercises - attitudes and physical behaviour: running, jumping, chasing, etc,
- Verbal expression - nursery rhymes, stories, tales, riddles, games of logic and reasoning.
- Concrete items - figurative and symbolic objects such as dolls, masks or other meaningful objects.
- All behaviour related to performing or plastic forms of expression - choreography, theatre, transforming appearances, drawing, modeling.
- Any objects which are not specifically intended as playthings but might acquire such a function because of their appeal and the service they might render to the subject.
- Create a safe, friendly and positive atmosphere.
- Adapt a language to suit the age and experience of students

- Give regular verbal feedback that respects students and helps them develop as independent learners.
- Teach safe dance principles; non-judgmental attitudes; positive body image; punctuality, planning and preparation.

III. EFFECTIVE APPLICATION OF DANCE PLAY METHOD OF TEACHING CHILDREN WHO ARE EMOTIONALLY CHALLENGED

The following should be taken into consideration before adopting dance play method of teaching emotionally challenged children.

- The type of class (community, social, school, studio, professional etc)
- Participants' age, stage and needs
- The dance style/genre
- Class size and venue

IV. IMPORTANCE OF USING DANCE PLAY METHOD FOR TEACHING EMOTIONALLY CHALLENGED CHILDREN

The following strategies can be adopted for effective dance play method of teaching thus; Participate and model behaviour:

- It is sometimes necessary to limit your demonstration or participation in the actual moving/dancing portions of class. Modeling behaviour is also important for showing children how to behave. Ask the students what is the proper way to sit or stand while waiting on their spot or number, then show them, and then have them practice it with you.
- Offer "Dancers' Choice"
The freedom to choose is empowering, particularly for children who are learning to become independent in their thoughts and decisions. Try to include a chance for your dancers to make a choice at least once in each lesson. However, be careful about offering unlimited possibilities.
- Enlist and recruit a misbehaving child
A chronically misbehaving child can be like a little thorn in your side. If you're familiar with the advice to keep your enemies closer than your friends, this tip is similar. Instead of constantly reprimanding the child, *enlist* his/her help in some way. Ask her to be your helper when handing out props, or recruit him to make the check marks in the attendance roster.
- Offer positive feedback at every opportunity
Children respond well to positive feedback. Continually be on the look out for things that are

being done well. This gives the class a chance to model the appropriate behavior.

- Limit negative attention

A child will eventually stop responding to his/her name if it is said over and over in a negative way.

The Role of Yoga in Health and Wellness

By Sunil M. Labde

Shree Hanman Vyayam Prasarak Mandal, India

Abstract- Modern life style is posing a series challenge to human health. The fast change of ever changing trends in modern life is causing physical, moral, mental, and spiritual problems. Chaos and confusion, stress and tension, commercialization and competition in every walk of life has lead to a situation where man is finding itself helpless regarding his personal health and hygiene. An individual who comes to this earth has every right to enjoy each and every gift of nature, to live freely and happily. Technological advancement has resulted in reduction of physical labour and increased mental labour. Tough labour in turn has resulted in psychosomatic disorders such as hyper tension, diabetes, insomnia acidity, gastric problems etc. Basically these disorders are caused due to faulty eating habits, stressful working conditions lack of physical exercises and proper rest.

Yoga is the only possible remedy to counter these hazardous habits. Practice of yogic principals and virtues are the only means wherein an individual can make his life happy and free from miseries.

Keywords: yoga, health & wellness.

Abstract- Modern life style is posing a series challenge to human health. The fast change of ever changing trends in modern life is causing physical, moral, mental, and spiritual problems. Chaos and confusion, stress and tension, commercialization and competition in every walk of life has lead to a situation where man is finding itself helpless regarding his personal health and hygiene. An individual who comes to this earth has every right to enjoy each and every gift of nature, to live freely and happily. Technological advancement has resulted in reduction of physical labour and increased mental labour. Tough labour in turn has resulted in psychosomatic disorders such as hyper tension, diabetes, insomnia acidity, gastric problems etc. Basically these disorders are caused due to faulty eating habits, stressful working conditions lack of physical exercises and proper rest.

Yoga is the only possible remedy to counter these hazardous habits. Practice of yogic principals and virtues are the only means wherein an individual can make his life happy and free from miseries.

Health and wellness is the concern of each and every person. The condition of modern life offers us much less in spite of our material wealth, than it did to the previous generations. We suffer from the modern disease-stress stress created by selfishness, competitiveness, acquisitiveness and insensitivity to the destruction of our human relations and environment. As a result we suffer from all sorts of physical and mental illness which evens our modern schools of medical science cannot alleviate. Instead, many people are turning to a far older tradition, a tradition that appears to be steeped in religion and mystery, but, in facts, are much more pragmatic in its application to our everyday lives than it would first appear.

Yoga should not be considered as an antiquated myth of yesterday because it has as much validity and value now as it had ever before and can offer guidance and help to the modern man. There are many people practicing yoga today who are still unclear about the relevance of certain aspects of yoga. Much of the confusion has arisen from the very age of yoga. Its origins are lost in time, so that though we may be clear about the essence, that is, the purpose of yoga and its underlying concept, we may yet be very hazy about just what to do when and under which circumstances.

Through yoga, any person, man, women or child, old or young, infirm or healthy, can apply himself /herself to the task and experience the sublime peace of the ancient yogis without retiring to cave or forest. Yoga has something to offer everyone and however little you are able to do, provided you practice sincerely and diligently, you cannot fail to get result.

Keywords: yoga, health & wellness.

I. INTRODUCTION

Aim of Yoga: Yoga have goal of aiding man to solve his problems so that he is better integrated in life. It is fairly evident from the evolutionary history of man that he has been in constant search for happiness. This search has led the modern man to new creations and luxuries. The grave for sensual pleasures, more comforts, better jobs, name, fame and power are all aimed to get more and more happiness. This may be called the western approach of modern civilization to life, very much discernible throughout the world today. This is hopefully designed around desires and their fulfillment.

On account of too much of competition, conflict, unrealized ambition and maladjustment in social life, a large number of people all over the world today, suffer from various kinds of mental diseases caused by frustration and depression. The basic reason for mental illness is a wrong philosophy, a mistaken and narrow view of life, and its dimensions, purposes and values. A sound philosophy of life based on its proper comprehension and factual understanding of life and the world and their proper relationship can lessen the number and prevalence of mental disorders, maladjustments and frustration. The modern man is badly in need of inner peace and calmness and security, which can come from self –knowledge and self –realization alone. We need to be *Sthitaprajna*, people of steady mind, as conceived by Shri Krishana in *Bhagavad Gita*.

It is universally recognized that Indian yoga constitutes one of the oldest and most significant scientific-spiritual legacies of mankind. It has been propagated and practiced since the dawn of human history. But the beginning of the yoga tradition is shrouded in the mists of antiquity. Seals portraying deities in meditative postures suggest that the yoga tradition is not only very very old but were accorded special recognition and sanctity in the Indian society.

Yoga is made up of those elements and aspects of science and spirituality which have a direct bearing on the integrated growth and fulfillment of the human being at all levels– physical, emotional, intellectual and spiritual. It is most important sector of knowledge because it is needed by all and can be cultivated according to inclination and capacity by any one and at any age. Through the practice of yoga the human body becomes strong, supple and healthy. The emotions and passions are controlled and the mind is

freed from the adverse impact and interference of the senses.

Upanishads says– “The first sign of advancement in yoga are lightness of body, good physical and mental health non-covetousness, clearness of complexion, pleasing voice, agreeable body order and scantiness of excretions.”

Maharishi Patanjali gave a tangible order to the various yogic practices and traditions. He gave eight steps viz, Yama, Niyama, Asana, Pranayama, Pratyahar, Dharna, Dhyana and Samadhi known as ashtang. (Goyandka). To get the knowledge of the self, the ultimate aim of yoga. These steps are:-

- Yamas or eternal vows
- Niyamas or observances
- Yogasanas or postures
- Pranayamas or breath control exercises
- Pratyahara or withdrawal of senses from distractions of the mundane world.
- Dharna or concentration
- Dhyana or continuance of dharana
- Samadhi or ultimate stage of meditation

Patanjali's yoga deals with the training of the mind to become pure being and to acquire dispassionate outlook to come out of the mess of intellect and emotions and thereby kill one's 'I'. Yogic practices make man objective in outlook and for him all opposing forces of this world lose charm.

Studies and investigations conducted on physiological and psychological aspects of yoga system of exercises have revealed that yogic practices tone up body and many diseases inflicting the body disappear. These practices bring about perfection of biological equilibrium in normal persons and lead to the recovery of homeostatic dysfunction in the ailing and sick persons. (Jain, 2000).

II. MENTAL DISPOSITION AND RELATED DISORDERS

'A sound mind in a sound body'-The ancient thinking of India reflects on these important aspects of our life. 'The mind is the creator of the body', it can change the body in any way it likes, into any form it chooses. It is the cause of all diseases and health of the body-declares Yogavasishta. Most of the diseases in our body can be traced to the disturbances within the mind-complex.

The sprouting of diseases calls attention to the very notion of 'freedom' of the mind. As substantive causes, the 'antagonistic thoughts' disrupt the mental freedom. They work as the mis adherents to the mind in the form of dispositions.

The Upnishadic seer had found six hitches which when well-attended will make man strive for a

healthy life. These are rightly the determinants of all 'irregularities' within the universal domain also. They are: kama (desire or sexual passion), krodha (anger), lobha (greed), moha (attachment or delusion), mada (egoism or pride), and matsarya (envy). Again there is another classification of the causes of mental infection. They are: raga (sexual attraction), matsarya (avarice), aparigraha (desire for appropriation of other's property), trishna (longing for worldly objects and enjoyments), lobha, dambha (arrogance), dvesa including krodha, irshya (envy), asuya (jealousy), droha (hatred), amarsha (revengefulness) and abhimana (pride), moha (delusion), viparyaya (false knowledge or doubt), bhaya (fear) and shoka (worry).

For the ancient people, the mind is constituted of three gunas-sattva, rajas and tamas. These three are considered as the root of all emotions. A mind with predominance in sattva is in its complete tranquility or balanced state that signifies blissful state of existence. The rajas has a disposition to activity that is the cause of pain or injury whereas tamas characterizes inertia. The last one makes one struggle in delusion or moha. In as much as these three are in equilibrium, a multitude of imperfections to the mind as well as the body will result. The suppressive activity of tamas over rajas and even sattva is an extreme position of reciprocal antagonism.

Yoga can play a significant role by providing the psychological disciplines needed to purify the personality in order to realize the highest truth, namely, the self. This brings about gradual bearing out of ego and its replacement by truth 'consciousnesses.

III. BENEFITS OF YOGA

a) Negative aspects

- Reduction in stress-induced addictions.
- Reduction in anti-social behavior of youth.
- Reduction in negative motivation like suicidal tendency and incidences.
- Reduction in negative traits like neuroticism and tendency to cause injuries to self and others.

b) Positive aspects

- Improvement in efficiency of work and job satisfaction.
- Development of positive outlook in life through positive motivation.
- Development of positive traits like self-confidence, self sufficiency and sociability.
- Improvement in healthy inter-personal relationship.
- Improvement in handling various problems in life.
- Remarkable improvement in the self-concept and proper evaluation of others.
- Improvement in necessary tenacity and perseverance essential for success in life.

- Control and prevention of psychosomatic disorders and peace of mind. (Shankar, 2007)

IV. CONCLUSION

Through yoga, any person, man, women or child, old or young, infirm or healthy, can apply himself / herself to the task and experience the sublime peace of the ancient yogis without retiring to cave or forest. Yoga has something to offer everyone and however little you are able to do, provided you practice sincerely and diligently, you cannot fail to get result. Yoga is the only possible remedy. Practice of yogic principals and virtues are the only means wherein an individual can make his life happy and free from miseries.

Nigeria, National Association for Exceptional Children Junior Academics' Mentors and Quality Research Assurance

By Vitalis Ugochukwu Eke, Igba Innocent Ushi & Iheke Chinasa Brown

University of Calabar, Nigeria

Abstract- This study investigated National Association for Exceptional Children (NAEC) Junior academics' mentors and quality research assurance. The study was all about members of NAEC in Nigeria who are junior academics and the status of their mentorship by senior academics and quality research assurance as a result in Nigeria. The study adopted a descriptive survey design. Purposive sampling technique was used to draw 24 paper presenters that are junior academics in the NAEC 2015 annual Conference held in Port Harcourt, River State of Nigeria. The sample was made up of junior academics that were drawn four each from among those on attendance from six geopolitical zones of Nigeria. All the states in Nigeria are zoned into six that guided the researcher in reaching the sample. An instrument for data collection named Junior Academics Mentors' Activities for Quality Research Assurance Questionnaire (JAMAFQRAQ) was constructed by the researcher. The instrument was validated by experts in Special Education, Measurement and Evaluation and Guidance and Counselling.

Nigeria, National Association for Exceptional Children Junior Academics' Mentors and Quality Research Assurance

Vitalis Ugochukwu Eke^a, Igba Innocent Ushi^o & Iheke Chinasa Brown^p

Abstract- This study investigated National Association for Exceptional Children (NAEC) Junior academics' mentors and quality research assurance. The study was all about members of NAEC in Nigeria who are junior academics and the status of their mentorship by senior academics and quality research assurance as a result in Nigeria. The study adopted a descriptive survey design. Purposive sampling technique was used to draw 24 paper presenters that are junior academics in the NAEC 2015 annual Conference held in Port Harcourt, River State of Nigeria. The sample was made up of junior academics that were drawn four each from among those on attendance from six geopolitical zones of Nigeria. All the states in Nigeria are zoned into six that guided the researcher in reaching the sample. An instrument for data collection named Junior Academics Mentors' Activities for Quality Research Assurance Questionnaire (JAMAFQRAQ) was constructed by the researcher. The instrument was validated by experts in Special Education, Measurement and Evaluation and Guidance and Counselling. The reliability coefficient of .84 as a measure of internal consistency was established through the use of Cronbach Alpha statistical technique. Frequencies, percentages and means were the descriptive statistics used for analysis of data collected. The results showed that the junior academics of NAEC are not exposed nor made to have access to all the useful principle standards that could assure quality of their research works and their senior colleagues that are regarded as their mentors do not make available for them adequate supervision activities that can guarantee improved quality assurance of their research works. Based on the findings of this study, recommendations were made which include among others that it should be made a tradition in the NAEC annual conference that one of the lead papers should address strategies of assuring quality research by curious investigators and inculcation of mentorship spirits among senior members to the junior academics.

Keywords: junior academics, mentors, NAEC, quality assurance, research.

1. INTRODUCTION

National Association for Exceptional Children (NAEC) is a very popular and famous organisation in Nigeria. It is an association for the special educators and allied professions. It was called and identified as National Council for Exceptional Children (NCEC) until this year, 2015 that it marked its silver jubilee (25years) that the name changed to NAEC.

Author a o p: Department of Special Education, Faculty of Education, University of Calabar, Nigeria. e-mail: arikpoikpi@yahoo.com

It is on record that within these past 25 years NAEC has organised 25 conferences and published 25 volumes and 30 issues of its Journal, "The Exceptional Child" (NAEC,2015). Beyond that the Association has published 10 volumes of the Association's book of readings and some dedicated text books to her deceased members (NAEC). This is a wonderful break through such that the consistency of the Association in publication deserve kudos. Above all, the current President of the Association, F. B. Obi (personal communication, 7th August, 2015) asserted that all the publications of the Association from 2013 would be online. This adds feather in the cap of the leadership of this association.

There is now high hope that the publications shall be online such that it shall enjoy wider readership. Every curious member especially the upcoming junior academics that are members shall be poised to publish in the Journal of the Association. Curiosity sets the tone for any research activity. Isangedighi (2012) opined that the process called research is a product of a curious mind with a desire to improve upon the ways things are working. This shows the importance of research. Research is the fountain of knowledge and an important source of providing guidelines for solving problems. Kpolovie (2010) recalled that any problem of study worth working should among others be characterized by the following.

It must appreciably advance knowledge in the chosen field when solved; it must be of genuine interest to the investigator; a problem which the investigator has no personal, social, cultural or religious bias on; a problem that the researcher has the necessary skills, abilities and background knowledge to investigate; a problem which when conclusively studied will not produce doubtful results because the instruments used for data collection are of satisfactory validity and reliability; it must meet the scope, topical requirements and significance of value of the institution or journal to which the findings will be submitted; a problem which is capable of producing findings that will be of great practical value and utility to society, scientists, educators other professionals and the general public ... (p.12).

The above truly addressed quality of researches to be carried out. Kpolovie has uncovered qualities of research. It is indeed germane for all research considered fit for publication to be of great quality. Harvey and Green citing in Ugodulunwa (2015) identified different approaches to the definition of quality: exceeding high standards; quality as culture; fitness for purpose; ...quality as transformative. Ugodulunwa viewed quality assurance as continuous process of evaluating the quality of a system, institution or programme. Ogunleye (2013) perceived quality assurance as a planned and systematic review process of how goals of an institution are being achieved, enhanced and sustained. The term quality stands for worth of something. It could be seen in this paper as worth of research where quality is assured for work to be considered publishable.

In the last conference of NAEC, over 36 papers were presented mostly by the members who are junior academics. Each of the papers was presented during the plenary sessions. There were criticism of each of the papers such that most of the junior academics learnt much from the critiques of the senior academics charged with the function. There were areas of agreement and disagreement that left members that are junior academics much confused. This was what made the president of NAEC (F. B. Obi, personal communication, 7th August, 2015) to opine that there should be a forum where acceptable method of writing papers be made bare. That means there should be ethics to guide every researcher especially the junior academics to improve on their writing skills.

There will be established publication ethics to improve upon the existing one. Global Science Research Journals (2013) that publish Journal of Special Education and services has publication ethics to be adhered to strictly. The publication ethics disallows fabrication and falsification, plagiarism, simultaneous submission of works, duplicate publication, redundant publication, improper author contribution or attrition, citation manipulation. Any failure to observe the foregoing attracts sanctions. This is a guide and caution for all persons aspiring to publish in this journal to be very much alert.

The junior academics might joy in established ethics to guide them attested to by all and limit any seeming or their embarrassment in plenary. Proper guide by senior colleagues is advantage to the junior ones. One wonders if actually these young and junior academics are guided in their respective institutions by the senior academics that may be members of NAEC. These senior academics ought to monitor and mentor these junior academics to improve their quality of research. Shavelson and Towne in Ugodulunwa (2015) identified useful standards for assessing quality of research.

Presence of a significant question to be investigated empirically to contribute to knowledge; application of methods that can best address the question of interest; basing. Research on clear reasoning that is justified by relevant literature; providing necessary information that will aid replication of study; ensuring that the design, methods and procedures are clear, transparent and objective; provision of detailed description of sample, sampling, intervention and comparison groups; using appropriate and reliable conceptualization and measurement of variables; evaluating alternative explanation for any findings; assessing possible impact to a peer review process; adhering to quality standards for reporting ... (p.7)

The foregoing could serve as useful principle standards for the junior academics in NAEC to be encouraged by their mentors to assure quality research work. This is by way of exposing the junior academics to the foregoing such that those standards are made accessible to them. In the same vein, European Association for Quality Assurance in High Education citing in Ugodulunwa (2013) disclosed the roles and responsibilities of supervisors to include

Providing satisfactory guidance and advice to students on research projects, standard expected, planning and setting targets and milestones, literature and source of information, research design, methods, instrumentation and procedure; encouraging students to procure necessary materials, attend lectures/seminars on research process, avoid plagiarism; ensuring students are aware of the need to comply with ethical and safety standards of their institution; monitoring of students' progress on the project should be carried out through regular scheduled meetings and discussions with students; provide timely and constructive feedback on students' work; encouraging students to prepare work and present at seminars and conferences and providing advice on research report writing for seminar, conferences and examination criteria..(p.8)

The above activities could also be taken up by the mentors of the junior academics that could be members of NAEC so as to assure quality research. The above venture might be a saving grace to junior academics in the present day syndrome of one either publishes or perishes. Another axiom has it that one either makes oneself visible or that nobody asks for one. In a study by Asim and Eni (2015) on use and misuse hypotheses and statistical tools to test such hypotheses in educational research in University of Calabar, Nigeria, they found that that out of 90 cases, less than half, specifically, 43 (47.8%) were appropriate while 47 (52.2%) were inappropriate. They also found that the most popular technique was abused hence instead of

calculating Phi coefficient, some students used Pearson's product moment correlation. Asim and Eni then recommended organising refreshers courses for supervisors of graduate Theses to enable them guide students properly on how to state hypotheses correctly and subsequent selection of appropriate technique to test their hypotheses and that graduate courses on statistical methods should be reviewed and made to emphasize more on real life cases and not on formulae. The above revelation by Asim and Eni epitomizes the significant role of mentoring the young junior academics. Their study highlighted the need of expertise of the mentors to be able to equip the junior academics well. The foregoing testifies heated argument that arise even among some senior academics in plenary sessions and or in theses defence to the chagrin of junior academics on which way to go. In another study by Ekeh and Opara (2013) on the extent of research mentoring among a sample of 436 out of 587 junior academics in University of Port Harcourt, Nigeria the result showed that the junior academics are not adequately mentored in research by their senior colleagues and that no significant difference existed in the extent junior academics were mentored in research by their senior colleagues due their areas of specialization. Eke and Opara recommended therefore correction of imbalance in research mentoring opportunities and that there should be encouragement of effective utilization of research mentoring hence an indispensable approach for the improvement of research standard and development of education and the nation. The above investigators had said it all and if such is true also in the area studied by them the quality of research by these junior academics can be imagined. In fact there may not be assurance of quality. Though the investigators made recommendations to improve on the quality which squarely rests on the mentoring some time ago, one wonders the present status of mentoring not only there but in other areas. This brings NAEC junior academics to mind.

The works of junior academics that are members of NAEC call for proper survey of the useful principle standard disposed and made accessible to them in NAEC and or in their respective institutions by their mentors. In this study junior academics include the graduate assistants, assistant lecturers, lecturer two and lecturer one or other junior academics within this bracket. They need mentors to truly forge ahead. Hornby (2007) perceived mentor as an experienced person who advises and helps somebody with less experience over a period of time. Sadker and Sadker in Ekeh and Opara (2013) conceived mentor as a guide or an adviser, someone who has experience with the challenges that the trainees face, the ability to communicate that experience and the willingness to do so. The junior academics are faced with challenges and utilization of experience of the mentors seem a panacea.

It is worthy to note that mentor not only should acquire the experience but have the ability and willingness to give such out to others that are with less experience. These are two different things. A mentor is not only perceived as a guide but should actually guide not only an adviser but should be advising.

There is need to uncover supervision activities availed the junior academics by their mentors to assure their quality research in this noble Association. There were over 36 papers in the last conference that were shared into four groups during the plenary session to be presented and defended. Most of the papers were done by junior academics and criticisms of their works, presentation and defence aroused the curiosity of this researcher to investigate mentorship of senior academics in their respective institutions and or in NAEC conferences for improved quality papers. The status of mentorship of these curious junior academics might add value to quality of NAEC journal. This is apt hence the journal of NAEC: "The Exceptional Child" goes online to enjoy wider readership with guarantee of quality assurance.

II. STATEMENT OF PROBLEM

Research is indispensable for every academic. Quality research assurance is now in vogue. Every young and junior academic is eager to publish. The way for the junior academics to publish assured quality works is mentorship spirit of senior academics. The willingness and ability of the mentors to guide, advise and monitor these young upcoming junior academics that are very eager to learn maximally improve quality assurance of their research works.

It seems that these young and junior academics are not mentored let alone adequately mentored for writing quality research papers. Some do not even know how to articulate a researchable topics let alone the ones that are topical. Most of them hardly can state good research questions and hypotheses with appropriate statistical tools. Some who do it right cannot justify it in their defence. They often abuse publication ethics. This gives rise to poor quality of research work by these honest and curious junior academics left on their own to carry out studies with their very limited experience.

In view of the above scenario in NAEC and for the sake the status of its journal, it is apt to investigate Junior academics' mentors and quality assurance of their research works. No study available to the researcher has addressed above subject matter among the junior academics of NAEC. Members of NAEC are spread across all the states in the six geopolitical zones in Nigeria. It is then apt to carry out this study to deduce comprehensive findings and conclusion. The researcher considers the study germane in view of the future of the junior academics

and quality assurance in their research works in not only in NAEC but beyond. This is also because the journal of NAEC is now on line and most of the works that may form bulk of the articles might be coming from the junior academics. It is based on the above premise that the researcher wished to carry out study on NAEC Junior academics' mentors and quality research assurance.

III. PURPOSE OF THE STUDY

The purpose of the study was to investigate NAEC Junior academics' mentors by the and quality research assurance in Nigeria. Specifically, the study sought to

- Identify useful principle standards accessible to junior academics to assure quality research.
- Find out supervision activities availed the junior academics to assure quality research.

IV. RESEARCH QUESTIONS

Two research questions guided the study.

- What are the useful principle standard accessible to the junior academics to assure quality of their research?
- What are the supervision activities availed the junior academics to assure quality of their research?

V. METHOD

The study used a descriptive survey. Purposive sampling technique was adopted to draw the sample. This was used because out of the presenters of 36 papers in the plenary session of the last NAEC 2015 Conference most of them are works of junior academics. They are graduate assistants, assistant lecturers, lecturer two and lecturer one or those in that bracket were considered special population for this study. The researcher also had to witness their presentation in the plenary session inquired to uncover they belong to above population. Beyond that the researcher found the geopolitical zone each junior academic come from hence all the states in Nigeria are divided into six : South East, South South, South west,

North North, North Central and North East. Four (4) junior academics in each of these zones were drawn to make up the sample of 24 through purposive sampling technique. That means that 24 junior academics that were authors/co-authors of the papers and personally presented in the conference served as the sample. The researcher generated instrument named Junior Academics Mentors' Activities for Quality Research Assurance Questionnaire (JAMAFQRAQ). The items for the instrument were guided by works of Shavelson and Towne and that of European Association for quality association for quality assurance as cited in Ugodulunwa (2015). The items were adapted and adopted to serve as item statements in the instrument for the junior academics. The instrument was later face and content validated by three experts; one each from Special Education, Measurement and Evaluation and Guidance and counselling. The reliability of the instrument was determined through Cronbach Alpha and it has reliability coefficient of .84. The instrument elicited information on useful principle standards the junior academics are accessible to and the supervision activities available to the junior academics to assure their research qualities. A descriptive statistics of frequencies, percentages and means were used to describe data obtained where any item with mean equal or more than 2.50 was adjudged principle standard accessible to the junior academics (PSA) and if less it was perceived as not accessed (NE) for items 1 through 10. But for items 11 through 20 where the mean score was 2.50 and above it was regarded Supervision Activities Available (SAA) but when less than the bench mark it became Supervision Activity not Available (SANA).

VI. RESULTS

The results of the analysis of the data obtained are shown in the table below. The statistics used is mainly descriptive tool of means (x)

- a) Research Question 1: What are the useful principle standard accessible to the junior academics to assure quality of their research?

Table 1 : Descriptive analysis of principle standard for quality research for jnr. academics

SN	Statements	Always	Often	Rarely	Never	Mean
1	There are significant questions that contribute to the knowledge to be investigated empirically by the jnr. Academics	4 (16%)	3 (12%)	10 (41%)	7 (31%)	2.10
2	There are methods to be applied that address question of interest of the jnr. Academics.	3 (12.5%)	2 (8.3%)	9 (37.5%)	10 (41.7%)	1.92
3	There are relevant literature to justify reasons for research for the jnr. Academics	8 (33.3%)	8 (33.3%)	6 (25%)	2 (8.3%)	2.92
4	There are pieces of information that aid replication of study for the jnr. Academics.	7 (31%)	8 (33%)	6 (25%)	3 (12%)	2.79
5	Clear, transparent and objective design, methods and procedures are ensured for the sake of the jnr. Academics	3 (12%)	4 (16%)	7 (31%)	10 (41%)	2.00

6	Samples, sampling, intervention are provided in details for the jnr. Academics	4 (16%)	2 (8.3%)	7 (31%)	10 (41%)	1.92
7	Conceptualization and measurement of variables considered reliable are used appropriately by the jnr. academics.	2 (8.3%)	3 (12.5%)	9 (37.5%)	8 (33%)	1.86
8	Findings are evaluated for the jnr. academics for alternative explanations	3 (12.5%)	4 (16%)	9 (37.5%)	8 (33%)	2.08
9	Researchers are submitted by the jnr. Academics for peer review process	2 (8.3%)	3 (12.5%)	7 (31%)	12 (50%)	1.79
10	Quality standard for reporting are adhered to by the jnr. Academics.	2 (8.3%)	2 (8.3%)	8 (31%)	12 (50%)	1.50

From the above it shows that out of all the useful principle standard those accessible to the junior academics to encourage and inspire them for quality research are only two out of ten. These are items 3 and 4 that addressed being disposed to relevant literature and information that aid replication of study. Their mean scores are 2.92 and 2.79 respectively. They are therefore deduced as principle standard accessed (PSA) where as the other eight are adjudged as

principle standard not accessed (PSNA) hence none has mean up to 2.50 let alone above the bench mark. This result suggests that the junior academics are not able to have access to the useful principle standard that can guarantee quality assurance of their research works most probably because are disposed to them.

b) Research Question 2: What are the supervision activities availed the junior academics to assure quality of their research?

Table 2 : Descriptive analysis of supervision activities available to jnr. Academics for quality assurance in research

SN	Statements	Always	Often	Rarely	Never	Mean	Dec.
11	Provision of satisfactory guidance and advice by mentors.	2 (8.3%)	3 (12%)	10 (41%)	79 (37.5%)	1.75	
12	Proper research design, methods, instrumentation and procedure exposed to jnr. academics	3 (12.5%)	2 (8.3%)	9 (37.5%)	10 (41.7%)	1.92	
13	Encourage the jnr. Academics to procure necessary materials, attend lectures/seminar on research process.	8 (33.%)	7 (31%)	3 (12%)	6 (25%)	2.70	
14	Instruct the jnr. academics to avoid plagiarism because of the implication.	7 (31%)	8 (33%)	4 (16%)	5 (20%)	2.70	
15	Ensure that the jnr. academics are aware and abide by ethics and standard accepted.	2 (8.3%)	3 (12.3%)	11 (45.8%)	8 (33%)	1.95	
16	Assisting the jnr. Academics' progress on research upon their request.	4 (16%)	4 (16%)	8 (33%)	8 (33%)	2.17	
17	Provision of timely and constructive feedback on jnr. Academics' research works.	3 (12%)	2 (8.3%)	10 (41.7%)	9 (37.5%)	1.95	
18	Inspiring jnr. Academics to prepare works and present at seminars and conferences.	8 (33%)	8 (33%)	4 (16%)	4 (16%)	2.83	
19	Effective supervision of the jnr. Academics research works to be published.	2 (8.3%)	3 (12.5%)	9 (37.5%)	10 (41.7%)	1.88	
20	Mentors being dedicated and selfless to raise the jnr. Academics research expertise.	2 (8.3%)	2 (8.3%)	9 (37.5%)	11 (45%)	1.79	

In Table two, results showed that out of supervision activities expected of the mentors, only three are availed the junior academics. These are items 13, 14 and 18 that addressed encouraging jnr. Academics to procure necessary materials and attend lectures/seminar on research process, instruction to avoid plagiarism and inspiring the jnr. Academics to prepare work and present in seminar and conferences. Their

mean scores are 2.70, 2.70 and 2.83 respectively. These are taken as the supervision activities available(SAA) The other seven in as much as their mean scores are below 2.50, are assumed as expected supervision activities not available(SANA). The above results uncovered the status of mentorship of the jnr. Academics which has implication for assurance of quality of their research works.

VII. DISCUSSION

In table one it was found that useful principle standards made accessible to the junior academics are being disposed to are relevant literature and information that aid replication of study. These findings corresponds with that of Kpolovie(2010) in his assertion that background knowledge of a problem makes any study outstanding and this can arise of reviewing relevant literature. The findings of this study are reinforced by Shavelson and Towne in Ugodulunwa (2015) hence among the identified useful principle standards are relevant literature and getting information that aid replication. According these authors the foregoing improve quality assurance of research. It was further noted that other eight useful principle standards articulated by the authors are not accessed by the junior academics. This definitely could underscores the quality of the research works of these junior academics. The issue of design and statistical tools are not being properly exposed and made accessible to the junior academics might pose problem to young researchers as has been uncovered in a study by Asim and Eni (2015) on evaluation use and misuse of statistical tools by graduate students in University of Calabar, Nigeria. In the study they found that that out of 90 case, less than half, 43(47.8%) were appropriate while 47 (52.2%) were inappropriate. They also found that the most popular technique statistical tools use by these graduate students was abused. The above students could be junior academics. The findings of this study ignored area of problem that is topical that can contribute to knowledge. This was reiterated by Kpolovie (2010) as he affirmed that any problem of study worth must appreciably advance knowledge in the chosen field when solved.

In table two, the findings revealed that there are only three supervision activities availed the junior academics for quality assurance of their researches. These findings addressed encouraging junior Academics to procure necessary materials; attend lectures/seminar on research process and instruction to avoid plagiarism and inspiring the junior academics to prepare works and present at seminar and conferences. These findings have support of European Association for Quality Assurance in High Education as cited in Ugodulunwa (2015) that identified responsibilities of supervisors to include encouraging students to prepare works for seminars and conferences, avoidance of plagiarism and encourage students attend lectures/seminar on research process. These findings have the sympathy of Global Science Research Journals (2013) that in outlining its publication ethics emphasized avoidance of plagiarism among others That notwithstanding there are other seven important supervision activities of the mentors not availed the junior academics that are prone to assure improved

quality research of the junior academics. That has shown in this study that the junior academics are not sufficiently mentored. The above finding has the backing of a study by Ekeh and Opara (2013) on the extent of research mentoring among junior academics in University of Port Harcourt, Nigeria where the result showed that the junior academics are not adequately mentored in research by their senior colleagues.

VIII. CONCLUSION

Based on the findings of this study, it is concluded that the useful principle standard accessible to the junior academic are grossly insufficient to assure quality of their researches. It is also concluded that supervision activities availed the junior academics by their mentors cannot guarantee quality assurance of their researches.

IX. RECOMMENDATIONS

It is based on the conclusion reached above as a result of findings of this study that the following recommendations are made.

- There should be a forum to be organised by NAEC among the senior academics to articulate publication ethics to guide junior academics for improved quality research.
- All the senior members of NAEC in different academia should take a refresher course on best practices and institute uniform approach in research quality assurance and be made able and willing to impart same to junior academics.
- There should be forum for all members of NAEC, a few months before the annual conference in each geopolitical zone or in the state chapters of NAEC to review topical problems, design and statistical methods from the subject matter of the theme of the Conference to real life cases to guide improved skills of writing quality research papers.
- It should be made a tradition in the NAEC annual conference that one of the lead papers should address strategies of assuring quality research by curious investigators and inculcation mentorship spirits among senior members to the junior academics.
- Every junior academics should read and commit to memory recognized local and foreign books on Advanced research and should be ready to consult the senior academics that may or may not be NAEC member for clarifications if need be.
- The team of Editorial crew of the NAEC journal "The Exceptional Child" should articulate standard for articles considered publishable in the journal to make the junior academics to sit up and lease with mentors to produce good works of global standard for the sake of the status of the journal now online.

Combat Role for Women in the Indian Armed Forces

By Wg Cdr Jasbir Singh Minhas (Retd.) & Dr. Nilesh Arora

Chandigarh University, India

Abstract- Introduction: The woman is participating in the every field with the men in the modern age. In the armed forces also women is performing different duties. The current study will evaluate the role of the Indian women in the armed forces especially in the combat role. The study also investigates the perception of the officials and physiologists of the armed forces about the same.

Research Methodology: The study is primary in the nature. A sample size of 108 has been selected for the study. Systematic random sampling has used for the selection of the sample. For the analysis of the data descriptive statistics, correlation, regression, factor analysis and T test has been used.

Findings: Most of the respondents agreed that women can effectively participate in the armed forces as the combat role. The findings also reveal that women is physically and mentally fit to perform in the combat role in the armed forces.

Originality: This paper is original in nature and the study is highly called for.

Keywords: armed forces, India, women, combat fighting.

Combat Role for Women in the Indian Armed Forces

Wg Cdr Jasbir Singh Minhas (Retd.)^α & Dr. Nilesh Arora^σ

Abstract- Introduction: The woman is participating in the every field with the men in the modern age. In the armed forces also women is performing different duties. The current study will evaluate the role of the Indian women in the armed forces especially in the combat role. The study also investigates the perception of the officials and physiologists of the armed forces about the same.

Research Methodology: The study is primary in the nature. A sample size of 108 has been selected for the study. Systematic random sampling has used for the selection of the sample. For the analysis of the data descriptive statistics, correlation, regression, factor analysis and T test has been used.

Findings: Most of the respondents agreed that women can effectively participate in the armed forces as the combat role. The findings also reveal that women is physically and mentally fit to perform in the combat role in the armed forces.

Originality: This paper is original in nature and the study is highly called for.

Keywords: armed forces, India, women, combat fighting.

I. INTRODUCTION

The women are performing really well in all the fields starting from house hold management to space shuttle.. Three top private banks have women as their CEOs namely Shikha Sharma as CEO & MD of Axis bank, Chanda Kochhar CEO & MD of ICICI bank and Naina Lal Kidwai as India country head of HSBC. In politics also the women are powerful and performing as Chief Ministers of states like West Bengal and Tamil Nadu and in the recent past the Chief Minister of UP was also women. Not only the fields of politics and banks but all the fields like Medicine, Engineering, Pharmaceuticals, Management, Defense and Para-Military forces have attracted women and they performed very well and in some cases they have outnumbered and performed better than their male counterpart.

The Indian Armed Forces consists of three professional uniformed services: the Indian Army, Indian Navy, and Indian Air Force. Additionally, the Indian Armed Forces are supported by three paramilitary organizations (Assam Rifles, Indian Coast Guard and Special Frontier Force) and various inter-service institutions such as the Strategic Forces Command. The

President of India is the Supreme Commander of the Indian Armed Forces.

The Indian Armed Forces, which for long was considered a male dominated workplace, now has confident, bold women, molding into every role and setting examples for future generations. Lieutenant General Puneeta Arora, a lady officer from the Army Medical Corps, heads the prestigious defense institution, the Armed Forces Medical College (AFMC), in Pune. Padmavathy Bandopadhyay was the first woman Air Marshal of the Indian Air Force. The role of women in the armed forces for a long time, was limited to the medical profession i.e. doctors and nurses. In 1992, the doors were thrown open for women entry as regular officers in aviation, logistics, law, engineering and executive cadres. Three wings of armed forces have women officers ranging between appx 3.3 % to 10.4 % of the total present strength of the officers. Women officers in the armed forces are performing very well and exhibiting their responsibility and duties shoulder to shoulder with their male counter parts. Even though 20 years have passed there is no policy and scheme made by Indian Government to induct women in combat role and as PBOs in their three fleets of armed forces.

Bright, young and energetic men and women make up the bulk of manpower in the armed forces. Recruitment is voluntary, which implies that every citizen of India is eligible to be a part of it, provided he/she fulfils the specified criteria for selection. Caste, region or religion, do not come in the way of the selection process, thereby making it a heterogeneous work place. The current study will evaluate the possibility for women as combat fighter in the armed forces of India. The also investigate the perception of the army officials (i.e., Officers, Women officers, Physiologists) about the same.

The study will be divided into six parts. The first part discusses the overview of the study. The second part reveals the literature. The third section reveals the objectives of the study. The forth section depicts the methodology used for the purpose of the study. The sixth part shows the analysis of the data and the last part uncovers the conclusion for the study.

II. REVIEW OF LITERATURE

A number of scholars evaluated the participation of women in the armed forces at the both levels (i.e., technical and operations). Cook (2006)

Author α: Research Scholar, Chandigarh University, India.
e-mail: minhasjs84@yahoo.com

Author σ: Additional Director, Chandigarh University, India.

stated that Women have played many roles in the military for over 3,000 years in a large number of cultures and nations. Despite various, though limited, roles in the armies of past societies, the role of women in the military, particularly in combat was very limited and it is only recently that women have begun to be given a more prominent role in contemporary armed forces. The debate is on as numbers of countries begin to expand the role of women in their armed forces. The status of women in the armed forces of the important countries of the world is as follows in the subsequent paragraphs. The other scholars also supported the fact and discusses the past condition and future possibility of women in the armed forces. Sowers (2003) argued that the current tally of woman in the Russian Army is standing at around 115,000 to 160,000, representing 10% of Russia's military strength. The only nation to deploy female combat troops in substantial numbers was Russia. British took the lead in 1938 worldwide in establishing uniformed services for women. By August, 1941, women were operating the fire-control instruments; they were never allowed to pull the trigger, as killing the enemy was considered to be too masculine. More than 500,000 women were volunteer uniformed auxiliaries in the German armed forces in 1944-45. In the Luftwaffe they served in combat roles helping to operate the anti — aircraft systems that shot down Allied bombers. The reports of the different armed research organizations also evaluated the position of the women in the armed forces. *WSIDF (2010)* reveals that Israel is currently the only country in the world with a mandatory military service requirement for women Roles for women beyond technical and secretarial support started to open up in the late 1970s and early 1980s. In 2000, Equality amendment to the Military Service law granting equal opportunities in the military to women found physically and personally suitable for a job in 2000. Women started to enter combat support and light combat roles in a few areas, including the Artillery Corps, infantry units and armored divisions. In his study *Campbell (1993)* depicts that the United States is considered a pioneer and a trend-setter as regards to induction of women in the services. There are approximately 200,000 American women on active duty in the US armed forces. They constitute nearly 20 percent of its strength. Women are also participating in Iraq operations in large numbers. 15% women are the part of French armed forces The role of women in the French military grew in 1914 with the recruitment of women as personnel in the combined branches of the French military. They are 11% of the Army forces, 13% for the Navy, 21% of the Air Force and 50% of the Medical Corps. This is the highest proportion of female personnel in Europe. It has been reported in the (Girls in the army: Norway passes bill on mandatory military service for women, 2014) that women in Norway have been in defense since 1938, and during the Second

World War both enlisted women and female officers served in all branches of the military. Between 1977 and 1984, the Norwegian Parliament passed laws expanding the role of women in the Norwegian Armed Forces. In 1995, Norway allowed women to serve on its military submarines, The Parliament of Norway plans conscription for women on equal terms with men in 2015. Singapore also allows women to serve in combat roles. Sri Lanka Air Force (SLAF) was the first service of the Sri Lankan military to allow women to serve followed by Army in 1979 with the establishment of the Sri Lanka Army Women's Corps (SLAWC). Not only in the western countries but in the asian countries also participation of women in the armed forces has been discussed in the research. Pakistan is the only country in the Islamic world to have women appointed in the high ranking assignments and the general officer ranks, as well as performing their military duties in the hostile and combat military operations. *Staff editorial report (2006)* reveals that women have been taking part in Pakistan military since 1947 after the establishment of Pakistan. In 2006, the first women fighter pilots batch joined the combat aerial mission command of PAF and women in Pakistan Army have been trained in combat missions, particularly in sniper, airborne and infantry warfare. Currently 12.8% of women are serving in the Australian Defense Force (with 15.1% in the Royal Australian Air Force, 14.6% in the Royal Australian Navy and 10.5% in the Australian Army) and 17.5% of the reserves. In 1998, Australia became the fourth nation in the world to allow women to serve on its submarines. In the report (Categories of Entry, 2011) it has been reported that Indian Armed Forces consists of three professional uniformed services: the Indian Army, Indian Navy, and Indian Air Force. Additionally, the Indian Armed Forces are supported by three paramilitary organizations namely Assam Rifles, Indian Coast Guard and Special Frontier Force and various inter-service institutions such as the Strategic Forces Command. The strength of Indian Armed Forces is over 1.3 million active personnel. It is world's 3rd largest military force and has the world's largest volunteer army. Indian Army consists of 1,129,900 active personnel and 990960 as reserve. Indian Navy has a strength of 58,350 active and 55,000 as reserve personnel. Indian Air Force has a strength of 1,27,200 as active and 1,40,000 as reserve. In the article of (Deccan Herald, 22 Aug, 2012) it has been reported that women officers in the Indian Army, Navy and Air Force constitute only 3.3, 3.9 and 10.4 percent of the officer cadre respectively and these figures were achieved within 20 years from when they were first recruited. The role of women in the armed forces for a long time, was limited to the medical profession i.e. doctors and nurses. In 1992, the doors were thrown open for women entry as regular officers in aviation, logistics, law, engineering and executive cadres. Thousands of spirited young women applied against

advertisements and it was a turning point in the history of time. These women chose a new field where they had to painstakingly pave a path for the others to follow. Following are the branches where women are permitted to work in the Indian Armed Forces.

Though the scholars have discussed the role of women in the armed forces in the different parts of the world, the study on the role of women in the Indian armed forces as combat fighters is highly called for. The present study will evaluate the same topic.

III. OBJECTIVES OF THE STUDY

- To evaluate the role of women in the Indian Armed Forces
- To find out the perception of the army officials about the role of women in combat
- To evaluate the physical and mental strength of women in a combat role

IV. RESEARCH METHODOLOGY

The study is primary in the nature. A sample size of 108 has been selected for the study. Systematic random sampling has used for the selection of the sample. For the analysis following tools have been used. Following tools are used for data analysis.

The *mean* is a particularly informative measure of the "central tendency" of the variable if it is reported along with its confidence intervals.

$$\text{Mean} = \frac{\sum X_i}{n}$$

Usually we are interested in statistics (such as the mean) from our sample only to the extent to which they can infer information about the population. The confidence intervals for the mean give us a range of values around the mean where we expect the "true" (population) mean is located (with a given level of certainty).

$$s = \sqrt{\frac{\sum (x_i - \mu)^2}{N}}$$

where

μ is the population mean and N is the population size

$$s = [S (x_i - m)^2 / N]^{1/2}$$

The sample estimate of the population *standard deviation* is computed as:

$$s = \sqrt{\frac{\sum (x_i - \bar{x})^2}{(n-1)}}$$

where

\bar{x} is the sample mean and n is the sample size

The *variance* of a population of values is the square of standard deviation.

Skewness measures the deviation of the distribution from symmetry. If the skewness is clearly different from 0, then that distribution is asymmetrical, while normal distributions are perfectly symmetrical.

$$\text{Skewness} = \frac{nM_3}{(n-1)(n-2)s^3}$$

where

$$M_3 \text{ is equal to: } \sum_{i=1}^m (x_i - \bar{x})^3$$

s^3 is the sample standard deviation raised to the third power

n is the valid number of cases.

Kurtosis measures the "peakedness" of a distribution. If the *kurtosis* is clearly different than 0, then the distribution is either flatter or more peaked than normal; the *kurtosis* of the normal distribution is 0. *Kurtosis* is computed as:

$$\text{Kurtosis} = \frac{n(n+1)M_4 - 3M_2^2(n-1)}{(n-1)(n-2)(n-3)s^4}$$

where:

$$M_2 = \sum_{i=1}^m (y_i - \bar{y})^2$$

$$M_4 = \sum_{i=1}^m (y_i - \bar{y})^4$$

n is the valid number of cases

A line in a two-dimensional or two-variable space is defined by the equation $Y=a+bX$; in full text, the Y variable can be expressed in terms of a constant (a) and a slope (b) times the X variable. The constant is also referred to as the intercept, and the slope as the regression coefficient or B coefficient. Multiple regression procedures will estimate a linear equation of the form:

$$Y=a+b_1X_1+b_2X_2+\dots+b_pX_p$$

The regression line expresses the best prediction of the dependent variable (Y), given the independent variables (X). However, nature is rarely (if ever) perfectly predictable, and usually there is substantial variation of the observed points around the fitted regression line. The deviation of a particular point from Pearson's chi-square is used to assess two types of comparison: tests of goodness of fit and tests of

independence. A test of goodness of fit establishes whether or not an observed frequency distribution differs from a theoretical distribution. A test of independence assesses whether paired observations on two variables, expressed in a contingency table, are independent of each other – for example, whether people from different regions differ in the frequency with which they report that they support a political candidate.

The t -test can be used to compare a sample mean to an accepted value (a population mean), or it can be used to compare the means of two sample sets.

$$t = \frac{\bar{x} - \mu_0}{s/\sqrt{n}}$$

where s is the standard deviation of the sample, not the population standard deviation.

V. DATA ANALYSIS AND FINDINGS

The current chapter will discuss the findings of the data analyzed with the help of statistical tools

Table 1 : Descriptive Statistics

Table.1 shows that the mean value is lying between 1 and 3 ie strongly agree, agrees and neutral. It shows that most of the people agree with the study. All the people are in support that women can work in army in combat role and in PBOR's. The result of the standard deviation shows that there is very negligible deviation in

the data which shows that the data is normal in the nature. The result of the skewness and the kurtosis also supports the same fact. After descriptive statistics correlation has been used to check the relationship among the variables. Next table will reveal the result of correlation.

Table 2 reveals that there is a high degree of correlation among all the variables. This signifies that all the variables taken in the study is interlinked with each

other. The next table shows the result of the regression analysis.

Table 3 : Regression

Table 3-5 shows the result of the regression where variable 10 (Performance of women in the paramilitary forces). Is the dependent variable. The result shows that there is 84% impact of the independent variable on the dependent variable. Anova table also supports the finding of the regression where

the significance of the f test is less than 0.05. Further result of the coefficient table shows that variables 9,11,12,15 are the variables which are impacting the depending variable (10) heavily. Fig 1 reveals the result of the regression in the graphical form.

Normal P-P Plot of Regression Standardized Residual

Fig. 1

The P-P plot is the graphical representation of regression. The result of the figure validates the findings shows in the regression table as all the variables are close to the regression line.

VI. FACTOR ANALYSIS

Var24	21.023	107	.000	2.352	2.13	2.57
Var25	15.893	107	.000	1.787	1.56	2.01

Table 9 shows the results of the T test. In all the cases the significance value is less than 0.05 which signifies that the findings of the study can be generalized in case of the universe of the study.

VII. CONCLUSION

The present study revolves around the possibilities of combat role for the women in the Indian armed Forces. The views of the people are overwhelming towards the combat role for the women in the Armed Forces. The responses of the people through questionnaire were hinting strongly to involve women in the armed forces. The statistical tools results are also

indicating the provision of combat role for the women in the forces without any ambiguity. India had also started inducting women in to armed forces since 1992 but only in the officer cadre and without the role of combat Operation. The changing environment, security perception and the capabilities of the women's made them eligible to work in the paramilitary forces in combat roles. The Indian Air Force has also made it public on its also 73rd Air forces day that women will fly the fighter

aircraft from next year onward ITBP is also planning to induct women on the China border for the next year. This is the beginning of the combat operations role for women in the Indian Armed forces. The review paper is based on the feedback of 100 plus respondents. The respondents were chosen from three wings of the Armed forces of India ie Army, Air force & Navy. The respondents were chosen from serving & retired, officers & Men, Men and Women and of all available age groups. The above findings shows the possibility of deployment of women soldiers in combat role same as Sowers (2003) and Cook (2006) reveals in their study about the Russian army and other forces in the world. The results of the paper are inclining towards further increment of women in combat operation roles and their induction in the lower ranks of the forces.

The study also recommends that the further research required elaborating the possibility about the deployment of women soldiers in combat role. The further research may address the questions that on which battles and in which role the women may perform better as a combat warrior.

APPENDIX

Questionnaire

1. Women are courageous enough to work in the armed forces.
2. Women are physically capable to work in the armed forces.
3. Women are emotionally strong enough to work in the armed forces.
4. Women can manage home & office effectively.
5. Women can perform exceptionally well in the critical situations
6. Women are mentally fit to perform in the armed forces.
7. The performance of women in the Indian armed forces is encouraging & motivating for others to join armed forces.
8. Women in Modern age are as advance as males.
9. The awareness has made the women more temperamental and achiever in life.
10. Women's performance in the paramilitary forces like BSF, ITBP, CISF and CRPF is at par with their male counterparts.
11. BSF women performance on border patrolling is making them equally significant as men.
12. The Strength of women is more in the modern era in comparison to traditional women's.
13. The present environment is soothing the women to work in the armed force along with men.
14. The present condition in the armed forces has been created in such a way that the entry of women will be smooth & steady.
15. The competitive world has made the women stronger to stand beside men in all the fields.
16. The education and experience in the society has made women to create their own niche in fields of their occupation.
17. Women have proved herself by excelling in the most dangerous field like space mission's, sports and mountaineering.
18. 23 years of women's induction as officers into the Indian armed forces has made the services as competitive.
19. Working of women in rebel groups proves that a woman can fight as in militant organizations like Maoists, LTTE, NSCN, etc.
20. Women abilities have been much democratic and diplomatic which forms the part and parcel of military organizations of the world.
21. Women are as disciplined as men which have been the prime attribute of the armed forces.
22. Women are psychologically stronger than male.
23. Women can serve as commandos in armed operation.
24. Women have the ability to perform at all level of military hierarchy.
25. Women can perform equally well if recruited as PBOR's (personal below officer Rank.)

GLOBAL JOURNALS INC. (US) GUIDELINES HANDBOOK 2015

WWW.GLOBALJOURNALS.ORG

FELLOWS

FELLOW OF ASSOCIATION OF RESEARCH SOCIETY IN HUMAN SCIENCE (FARSHS)

Global Journals Incorporate (USA) is accredited by Open Association of Research Society (OARS), U.S.A and in turn, awards “FARSHS” title to individuals. The 'FARSHS' title is accorded to a selected professional after the approval of the Editor-in-Chief/Editorial Board Members/Dean.

- The “FARSHS” is a dignified title which is accorded to a person’s name viz. Dr. John E. Hall Ph.D., FARSS or William Walldroff, M.S., FARSHS.

FARSHS accrediting is an honor. It authenticates your research activities. After recognition as FARSHS, you can add 'FARSHS' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and repute to your name. You may use it on your professional Counseling Materials such as CV, Resume, and Visiting Card etc.

The following benefits can be availed by you only for next three years from the date of certification:

FARSHS designated members are entitled to avail a 40% discount while publishing their research papers (of a single author) with Global Journals Incorporation (USA), if the same is accepted by Editorial Board/Peer Reviewers. If you are a main author or co-author in case of multiple authors, you will be entitled to avail discount of 10%.

Once FARSHS title is accorded, the Fellow is authorized to organize symposium/seminar/conference on behalf of Global Journal Incorporation (USA). The Fellow can also participate in conference/seminar/symposium organized by another institution as representative of Global Journal. In both the cases, it is mandatory for him to discuss with us and obtain our consent.

You may join as member of the Editorial Board of Global Journals Incorporation (USA) after successful completion of three years as Fellow and as Peer Reviewer. In addition, it is also desirable that you should organize seminar/symposium/conference at least once.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The FARSHS can go through standards of OARS. You can also play vital role if you have any suggestions so that proper amendment can take place to improve the same for the benefit of entire research community.

As FARSHS, you will be given a renowned, secure and free professional email address with 100 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders, Auto-Responders, Email Delivery Route tracing, etc.

The FARSHS will be eligible for a free application of standardization of their researches. Standardization of research will be subject to acceptability within stipulated norms as the next step after publishing in a journal. We shall depute a team of specialized research professionals who will render their services for elevating your researches to next higher level, which is worldwide open standardization.

The FARSHS member can apply for grading and certification of standards of the educational and Institutional Degrees to Open Association of Research, Society U.S.A. Once you are designated as FARSHS, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria. After certification of all your credentials by OARS, they will be published on your Fellow Profile link on website <https://associationofresearch.org> which will be helpful to upgrade the dignity.

The FARSHS members can avail the benefits of free research podcasting in Global Research Radio with their research documents. After publishing the work, (including published elsewhere worldwide with proper authorization) you can upload your research paper with your recorded voice or you can utilize chargeable services of our professional RJs to record your paper in their voice on request.

The FARSHS member also entitled to get the benefits of free research podcasting of their research documents through video clips. We can also streamline your conference videos and display your slides/ online slides and online research video clips at reasonable charges, on request.

The FARSHS is eligible to earn from sales proceeds of his/her researches/reference/review Books or literature, while publishing with Global Journals. The FARSHS can decide whether he/she would like to publish his/her research in a closed manner. In this case, whenever readers purchase that individual research paper for reading, maximum 60% of its profit earned as royalty by Global Journals, will be credited to his/her bank account. The entire entitled amount will be credited to his/her bank account exceeding limit of minimum fixed balance. There is no minimum time limit for collection. The FARSS member can decide its price and we can help in making the right decision.

The FARSHS member is eligible to join as a paid peer reviewer at Global Journals Incorporation (USA) and can get remuneration of 15% of author fees, taken from the author of a respective paper. After reviewing 5 or more papers you can request to transfer the amount to your bank account.

MEMBER OF ASSOCIATION OF RESEARCH SOCIETY IN HUMAN SCIENCE (MARSHS)

The ' MARSHS ' title is accorded to a selected professional after the approval of the Editor-in-Chief / Editorial Board Members/Dean.

The “MARSHS” is a dignified ornament which is accorded to a person’s name viz. Dr John E. Hall, Ph.D., MARSHS or William Walldroff, M.S., MARSHS.

MARSHS accrediting is an honor. It authenticates your research activities. After becoming MARSHS, you can add 'MARSHS' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and repute to your name. You may use it on your professional Counseling Materials such as CV, Resume, Visiting Card and Name Plate etc.

The following benefits can be availed by you only for next three years from the date of certification.

MARSHS designated members are entitled to avail a 25% discount while publishing their research papers (of a single author) in Global Journals Inc., if the same is accepted by our Editorial Board and Peer Reviewers. If you are a main author or co-author of a group of authors, you will get discount of 10%.

As MARSHS, you will be given a renowned, secure and free professional email address with 30 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders, Auto-Responders, Email Delivery Route tracing, etc.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The MARSHS member can apply for approval, grading and certification of standards of their educational and Institutional Degrees to Open Association of Research, Society U.S.A.

Once you are designated as MARSHS, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria.

It is mandatory to read all terms and conditions carefully.

AUXILIARY MEMBERSHIPS

Institutional Fellow of Open Association of Research Society (USA) - OARS (USA)

Global Journals Incorporation (USA) is accredited by Open Association of Research Society, U.S.A (OARS) and in turn, affiliates research institutions as “Institutional Fellow of Open Association of Research Society” (IFOARS).

The “FARSC” is a dignified title which is accorded to a person’s name viz. Dr. John E. Hall, Ph.D., FARSC or William Walldroff, M.S., FARSC.

The IFOARS institution is entitled to form a Board comprised of one Chairperson and three to five board members preferably from different streams. The Board will be recognized as “Institutional Board of Open Association of Research Society”-(IBOARS).

The Institute will be entitled to following benefits:

The IBOARS can initially review research papers of their institute and recommend them to publish with respective journal of Global Journals. It can also review the papers of other institutions after obtaining our consent. The second review will be done by peer reviewer of Global Journals Incorporation (USA). The Board is at liberty to appoint a peer reviewer with the approval of chairperson after consulting us.

The author fees of such paper may be waived off up to 40%.

The Global Journals Incorporation (USA) at its discretion can also refer double blind peer reviewed paper at their end to the board for the verification and to get recommendation for final stage of acceptance of publication.

The IBOARS can organize symposium/seminar/conference in their country on behalf of Global Journals Incorporation (USA)-OARS (USA). The terms and conditions can be discussed separately.

The Board can also play vital role by exploring and giving valuable suggestions regarding the Standards of “Open Association of Research Society, U.S.A (OARS)” so that proper amendment can take place for the benefit of entire research community. We shall provide details of particular standard only on receipt of request from the Board.

Journals Research
inducing researches

The board members can also join us as Individual Fellow with 40% discount on total fees applicable to Individual Fellow. They will be entitled to avail all the benefits as declared. Please visit Individual Fellow-sub menu of GlobalJournals.org to have more relevant details.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

After nomination of your institution as “Institutional Fellow” and constantly functioning successfully for one year, we can consider giving recognition to your institute to function as Regional/Zonal office on our behalf.

The board can also take up the additional allied activities for betterment after our consultation.

The following entitlements are applicable to individual Fellows:

Open Association of Research Society, U.S.A (OARS) By-laws states that an individual Fellow may use the designations as applicable, or the corresponding initials. The Credentials of individual Fellow and Associate designations signify that the individual has gained knowledge of the fundamental concepts. One is magnanimous and proficient in an expertise course covering the professional code of conduct, and follows recognized standards of practice.

Open Association of Research Society (US)/ Global Journals Incorporation (USA), as described in Corporate Statements, are educational, research publishing and professional membership organizations. Achieving our individual Fellow or Associate status is based mainly on meeting stated educational research requirements.

Disbursement of 40% Royalty earned through Global Journals : Researcher = 50%, Peer Reviewer = 37.50%, Institution = 12.50% E.g. Out of 40%, the 20% benefit should be passed on to researcher, 15 % benefit towards remuneration should be given to a reviewer and remaining 5% is to be retained by the institution.

We shall provide print version of 12 issues of any three journals [as per your requirement] out of our 38 journals worth \$ 2376 USD.

Other:

The individual Fellow and Associate designations accredited by Open Association of Research Society (US) credentials signify guarantees following achievements:

- The professional accredited with Fellow honor, is entitled to various benefits viz. name, fame, honor, regular flow of income, secured bright future, social status etc.

- In addition to above, if one is single author, then entitled to 40% discount on publishing research paper and can get 10% discount if one is co-author or main author among group of authors.
- The Fellow can organize symposium/seminar/conference on behalf of Global Journals Incorporation (USA) and he/she can also attend the same organized by other institutes on behalf of Global Journals.
- The Fellow can become member of Editorial Board Member after completing 3yrs.
- The Fellow can earn 60% of sales proceeds from the sale of reference/review books/literature/publishing of research paper.
- Fellow can also join as paid peer reviewer and earn 15% remuneration of author charges and can also get an opportunity to join as member of the Editorial Board of Global Journals Incorporation (USA)
- • This individual has learned the basic methods of applying those concepts and techniques to common challenging situations. This individual has further demonstrated an in-depth understanding of the application of suitable techniques to a particular area of research practice.

Note :

//

- In future, if the board feels the necessity to change any board member, the same can be done with the consent of the chairperson along with anyone board member without our approval.
- In case, the chairperson needs to be replaced then consent of 2/3rd board members are required and they are also required to jointly pass the resolution copy of which should be sent to us. In such case, it will be compulsory to obtain our approval before replacement.
- In case of “Difference of Opinion [if any]” among the Board members, our decision will be final and binding to everyone.

//

PROCESS OF SUBMISSION OF RESEARCH PAPER

The Area or field of specialization may or may not be of any category as mentioned in 'Scope of Journal' menu of the GlobalJournals.org website. There are 37 Research Journal categorized with Six parental Journals GJCST, GJMR, GJRE, GJMBR, GJSFR, GJHSS. For Authors should prefer the mentioned categories. There are three widely used systems UDC, DDC and LCC. The details are available as 'Knowledge Abstract' at Home page. The major advantage of this coding is that, the research work will be exposed to and shared with all over the world as we are being abstracted and indexed worldwide.

The paper should be in proper format. The format can be downloaded from first page of 'Author Guideline' Menu. The Author is expected to follow the general rules as mentioned in this menu. The paper should be written in MS-Word Format (*.DOC,*.DOCX).

The Author can submit the paper either online or offline. The authors should prefer online submission.Online Submission: There are three ways to submit your paper:

(A) (I) First, register yourself using top right corner of Home page then Login. If you are already registered, then login using your username and password.

(II) Choose corresponding Journal.

(III) Click 'Submit Manuscript'. Fill required information and Upload the paper.

(B) If you are using Internet Explorer, then Direct Submission through Homepage is also available.

(C) If these two are not convenient, and then email the paper directly to dean@globaljournals.org.

Offline Submission: Author can send the typed form of paper by Post. However, online submission should be preferred.

PREFERRED AUTHOR GUIDELINES

MANUSCRIPT STYLE INSTRUCTION (Must be strictly followed)

Page Size: 8.27" X 11"

- Left Margin: 0.65
- Right Margin: 0.65
- Top Margin: 0.75
- Bottom Margin: 0.75
- Font type of all text should be Swis 721 Lt BT.
- Paper Title should be of Font Size 24 with one Column section.
- Author Name in Font Size of 11 with one column as of Title.
- Abstract Font size of 9 Bold, "Abstract" word in Italic Bold.
- Main Text: Font size 10 with justified two columns section
- Two Column with Equal Column with of 3.38 and Gaping of .2
- First Character must be three lines Drop capped.
- Paragraph before Spacing of 1 pt and After of 0 pt.
- Line Spacing of 1 pt
- Large Images must be in One Column
- Numbering of First Main Headings (Heading 1) must be in Roman Letters, Capital Letter, and Font Size of 10.
- Numbering of Second Main Headings (Heading 2) must be in Alphabets, Italic, and Font Size of 10.

You can use your own standard format also.

Author Guidelines:

1. General,
2. Ethical Guidelines,
3. Submission of Manuscripts,
4. Manuscript's Category,
5. Structure and Format of Manuscript,
6. After Acceptance.

1. GENERAL

Before submitting your research paper, one is advised to go through the details as mentioned in following heads. It will be beneficial, while peer reviewer justify your paper for publication.

Scope

The Global Journals Inc. (US) welcome the submission of original paper, review paper, survey article relevant to the all the streams of Philosophy and knowledge. The Global Journals Inc. (US) is parental platform for Global Journal of Computer Science and Technology, Researches in Engineering, Medical Research, Science Frontier Research, Human Social Science, Management, and Business organization. The choice of specific field can be done otherwise as following in Abstracting and Indexing Page on this Website. As the all Global

Journals Inc. (US) are being abstracted and indexed (in process) by most of the reputed organizations. Topics of only narrow interest will not be accepted unless they have wider potential or consequences.

2. ETHICAL GUIDELINES

Authors should follow the ethical guidelines as mentioned below for publication of research paper and research activities.

Papers are accepted on strict understanding that the material in whole or in part has not been, nor is being, considered for publication elsewhere. If the paper once accepted by Global Journals Inc. (US) and Editorial Board, will become the copyright of the Global Journals Inc. (US).

Authorship: The authors and coauthors should have active contribution to conception design, analysis and interpretation of findings. They should critically review the contents and drafting of the paper. All should approve the final version of the paper before submission

The Global Journals Inc. (US) follows the definition of authorship set up by the Global Academy of Research and Development. According to the Global Academy of R&D authorship, criteria must be based on:

- 1) Substantial contributions to conception and acquisition of data, analysis and interpretation of the findings.
- 2) Drafting the paper and revising it critically regarding important academic content.
- 3) Final approval of the version of the paper to be published.

All authors should have been credited according to their appropriate contribution in research activity and preparing paper. Contributors who do not match the criteria as authors may be mentioned under Acknowledgement.

Acknowledgements: Contributors to the research other than authors credited should be mentioned under acknowledgement. The specifications of the source of funding for the research if appropriate can be included. Suppliers of resources may be mentioned along with address.

Appeal of Decision: The Editorial Board's decision on publication of the paper is final and cannot be appealed elsewhere.

Permissions: It is the author's responsibility to have prior permission if all or parts of earlier published illustrations are used in this paper.

Please mention proper reference and appropriate acknowledgements wherever expected.

If all or parts of previously published illustrations are used, permission must be taken from the copyright holder concerned. It is the author's responsibility to take these in writing.

Approval for reproduction/modification of any information (including figures and tables) published elsewhere must be obtained by the authors/copyright holders before submission of the manuscript. Contributors (Authors) are responsible for any copyright fee involved.

3. SUBMISSION OF MANUSCRIPTS

Manuscripts should be uploaded via this online submission page. The online submission is most efficient method for submission of papers, as it enables rapid distribution of manuscripts and consequently speeds up the review procedure. It also enables authors to know the status of their own manuscripts by emailing us. Complete instructions for submitting a paper is available below.

Manuscript submission is a systematic procedure and little preparation is required beyond having all parts of your manuscript in a given format and a computer with an Internet connection and a Web browser. Full help and instructions are provided on-screen. As an author, you will be prompted for login and manuscript details as Field of Paper and then to upload your manuscript file(s) according to the instructions.

To avoid postal delays, all transaction is preferred by e-mail. A finished manuscript submission is confirmed by e-mail immediately and your paper enters the editorial process with no postal delays. When a conclusion is made about the publication of your paper by our Editorial Board, revisions can be submitted online with the same procedure, with an occasion to view and respond to all comments.

Complete support for both authors and co-author is provided.

4. MANUSCRIPT'S CATEGORY

Based on potential and nature, the manuscript can be categorized under the following heads:

Original research paper: Such papers are reports of high-level significant original research work.

Review papers: These are concise, significant but helpful and decisive topics for young researchers.

Research articles: These are handled with small investigation and applications

Research letters: The letters are small and concise comments on previously published matters.

5. STRUCTURE AND FORMAT OF MANUSCRIPT

The recommended size of original research paper is less than seven thousand words, review papers fewer than seven thousands words also. Preparation of research paper or how to write research paper, are major hurdle, while writing manuscript. The research articles and research letters should be fewer than three thousand words, the structure original research paper; sometime review paper should be as follows:

Papers: These are reports of significant research (typically less than 7000 words equivalent, including tables, figures, references), and comprise:

- (a) Title should be relevant and commensurate with the theme of the paper.
- (b) A brief Summary, "Abstract" (less than 150 words) containing the major results and conclusions.
- (c) Up to ten keywords, that precisely identifies the paper's subject, purpose, and focus.
- (d) An Introduction, giving necessary background excluding subheadings; objectives must be clearly declared.
- (e) Resources and techniques with sufficient complete experimental details (wherever possible by reference) to permit repetition; sources of information must be given and numerical methods must be specified by reference, unless non-standard.
- (f) Results should be presented concisely, by well-designed tables and/or figures; the same data may not be used in both; suitable statistical data should be given. All data must be obtained with attention to numerical detail in the planning stage. As reproduced design has been recognized to be important to experiments for a considerable time, the Editor has decided that any paper that appears not to have adequate numerical treatments of the data will be returned un-refereed;
- (g) Discussion should cover the implications and consequences, not just recapitulating the results; conclusions should be summarizing.
- (h) Brief Acknowledgements.
- (i) References in the proper form.

Authors should very cautiously consider the preparation of papers to ensure that they communicate efficiently. Papers are much more likely to be accepted, if they are cautiously designed and laid out, contain few or no errors, are summarizing, and be conventional to the approach and instructions. They will in addition, be published with much less delays than those that require much technical and editorial correction.

The Editorial Board reserves the right to make literary corrections and to make suggestions to improve brevity.

It is vital, that authors take care in submitting a manuscript that is written in simple language and adheres to published guidelines.

Format

Language: The language of publication is UK English. Authors, for whom English is a second language, must have their manuscript efficiently edited by an English-speaking person before submission to make sure that, the English is of high excellence. It is preferable, that manuscripts should be professionally edited.

Standard Usage, Abbreviations, and Units: Spelling and hyphenation should be conventional to The Concise Oxford English Dictionary. Statistics and measurements should at all times be given in figures, e.g. 16 min, except for when the number begins a sentence. When the number does not refer to a unit of measurement it should be spelt in full unless, it is 160 or greater.

Abbreviations supposed to be used carefully. The abbreviated name or expression is supposed to be cited in full at first usage, followed by the conventional abbreviation in parentheses.

Metric SI units are supposed to generally be used excluding where they conflict with current practice or are confusing. For illustration, 1.4 l rather than $1.4 \times 10^{-3} \text{ m}^3$, or 4 mm somewhat than $4 \times 10^{-3} \text{ m}$. Chemical formula and solutions must identify the form used, e.g. anhydrous or hydrated, and the concentration must be in clearly defined units. Common species names should be followed by underlines at the first mention. For following use the generic name should be constricted to a single letter, if it is clear.

Structure

All manuscripts submitted to Global Journals Inc. (US), ought to include:

Title: The title page must carry an instructive title that reflects the content, a running title (less than 45 characters together with spaces), names of the authors and co-authors, and the place(s) wherever the work was carried out. The full postal address in addition with the e-mail address of related author must be given. Up to eleven keywords or very brief phrases have to be given to help data retrieval, mining and indexing.

Abstract, used in Original Papers and Reviews:

Optimizing Abstract for Search Engines

Many researchers searching for information online will use search engines such as Google, Yahoo or similar. By optimizing your paper for search engines, you will amplify the chance of someone finding it. This in turn will make it more likely to be viewed and/or cited in a further work. Global Journals Inc. (US) have compiled these guidelines to facilitate you to maximize the web-friendliness of the most public part of your paper.

Key Words

A major linchpin in research work for the writing research paper is the keyword search, which one will employ to find both library and Internet resources.

One must be persistent and creative in using keywords. An effective keyword search requires a strategy and planning a list of possible keywords and phrases to try.

Search engines for most searches, use Boolean searching, which is somewhat different from Internet searches. The Boolean search uses "operators," words (and, or, not, and near) that enable you to expand or narrow your affords. Tips for research paper while preparing research paper are very helpful guideline of research paper.

Choice of key words is first tool of tips to write research paper. Research paper writing is an art. A few tips for deciding as strategically as possible about keyword search:

- One should start brainstorming lists of possible keywords before even begin searching. Think about the most important concepts related to research work. Ask, "What words would a source have to include to be truly valuable in research paper?" Then consider synonyms for the important words.
- It may take the discovery of only one relevant paper to let steer in the right keyword direction because in most databases, the keywords under which a research paper is abstracted are listed with the paper.
- One should avoid outdated words.

Keywords are the key that opens a door to research work sources. Keyword searching is an art in which researcher's skills are bound to improve with experience and time.

Numerical Methods: Numerical methods used should be clear and, where appropriate, supported by references.

Acknowledgements: Please make these as concise as possible.

References

References follow the Harvard scheme of referencing. References in the text should cite the authors' names followed by the time of their publication, unless there are three or more authors when simply the first author's name is quoted followed by et al. unpublished work has to only be cited where necessary, and only in the text. Copies of references in press in other journals have to be supplied with submitted typescripts. It is necessary that all citations and references be carefully checked before submission, as mistakes or omissions will cause delays.

References to information on the World Wide Web can be given, but only if the information is available without charge to readers on an official site. Wikipedia and Similar websites are not allowed where anyone can change the information. Authors will be asked to make available electronic copies of the cited information for inclusion on the Global Journals Inc. (US) homepage at the judgment of the Editorial Board.

The Editorial Board and Global Journals Inc. (US) recommend that, citation of online-published papers and other material should be done via a DOI (digital object identifier). If an author cites anything, which does not have a DOI, they run the risk of the cited material not being noticeable.

The Editorial Board and Global Journals Inc. (US) recommend the use of a tool such as Reference Manager for reference management and formatting.

Tables, Figures and Figure Legends

Tables: Tables should be few in number, cautiously designed, uncrowned, and include only essential data. Each must have an Arabic number, e.g. Table 4, a self-explanatory caption and be on a separate sheet. Vertical lines should not be used.

Figures: Figures are supposed to be submitted as separate files. Always take in a citation in the text for each figure using Arabic numbers, e.g. Fig. 4. Artwork must be submitted online in electronic form by e-mailing them.

Preparation of Electronic Figures for Publication

Even though low quality images are sufficient for review purposes, print publication requires high quality images to prevent the final product being blurred or fuzzy. Submit (or e-mail) EPS (line art) or TIFF (halftone/photographs) files only. MS PowerPoint and Word Graphics are unsuitable for printed pictures. Do not use pixel-oriented software. Scans (TIFF only) should have a resolution of at least 350 dpi (halftone) or 700 to 1100 dpi (line drawings) in relation to the imitation size. Please give the data for figures in black and white or submit a Color Work Agreement Form. EPS files must be saved with fonts embedded (and with a TIFF preview, if possible).

For scanned images, the scanning resolution (at final image size) ought to be as follows to ensure good reproduction: line art: >650 dpi; halftones (including gel photographs) : >350 dpi; figures containing both halftone and line images: >650 dpi.

Color Charges: It is the rule of the Global Journals Inc. (US) for authors to pay the full cost for the reproduction of their color artwork. Hence, please note that, if there is color artwork in your manuscript when it is accepted for publication, we would require you to complete and return a color work agreement form before your paper can be published.

Figure Legends: Self-explanatory legends of all figures should be incorporated separately under the heading 'Legends to Figures'. In the full-text online edition of the journal, figure legends may possibly be truncated in abbreviated links to the full screen version. Therefore, the first 100 characters of any legend should notify the reader, about the key aspects of the figure.

6. AFTER ACCEPTANCE

Upon approval of a paper for publication, the manuscript will be forwarded to the dean, who is responsible for the publication of the Global Journals Inc. (US).

6.1 Proof Corrections

The corresponding author will receive an e-mail alert containing a link to a website or will be attached. A working e-mail address must therefore be provided for the related author.

Acrobat Reader will be required in order to read this file. This software can be downloaded

(Free of charge) from the following website:

www.adobe.com/products/acrobat/readstep2.html. This will facilitate the file to be opened, read on screen, and printed out in order for any corrections to be added. Further instructions will be sent with the proof.

Proofs must be returned to the dean at dean@globaljournals.org within three days of receipt.

As changes to proofs are costly, we inquire that you only correct typesetting errors. All illustrations are retained by the publisher. Please note that the authors are responsible for all statements made in their work, including changes made by the copy editor.

6.2 Early View of Global Journals Inc. (US) (Publication Prior to Print)

The Global Journals Inc. (US) are enclosed by our publishing's Early View service. Early View articles are complete full-text articles sent in advance of their publication. Early View articles are absolute and final. They have been completely reviewed, revised and edited for publication, and the authors' final corrections have been incorporated. Because they are in final form, no changes can be made after sending them. The nature of Early View articles means that they do not yet have volume, issue or page numbers, so Early View articles cannot be cited in the conventional way.

6.3 Author Services

Online production tracking is available for your article through Author Services. Author Services enables authors to track their article - once it has been accepted - through the production process to publication online and in print. Authors can check the status of their articles online and choose to receive automated e-mails at key stages of production. The authors will receive an e-mail with a unique link that enables them to register and have their article automatically added to the system. Please ensure that a complete e-mail address is provided when submitting the manuscript.

6.4 Author Material Archive Policy

Please note that if not specifically requested, publisher will dispose off hardcopy & electronic information submitted, after the two months of publication. If you require the return of any information submitted, please inform the Editorial Board or dean as soon as possible.

6.5 Offprint and Extra Copies

A PDF offprint of the online-published article will be provided free of charge to the related author, and may be distributed according to the Publisher's terms and conditions. Additional paper offprint may be ordered by emailing us at: editor@globaljournals.org.

Before start writing a good quality Computer Science Research Paper, let us first understand what is Computer Science Research Paper? So, Computer Science Research Paper is the paper which is written by professionals or scientists who are associated to Computer Science and Information Technology, or doing research study in these areas. If you are novel to this field then you can consult about this field from your supervisor or guide.

TECHNIQUES FOR WRITING A GOOD QUALITY RESEARCH PAPER:

1. Choosing the topic: In most cases, the topic is searched by the interest of author but it can be also suggested by the guides. You can have several topics and then you can judge that in which topic or subject you are finding yourself most comfortable. This can be done by asking several questions to yourself, like Will I be able to carry our search in this area? Will I find all necessary recourses to accomplish the search? Will I be able to find all information in this field area? If the answer of these types of questions will be "Yes" then you can choose that topic. In most of the cases, you may have to conduct the surveys and have to visit several places because this field is related to Computer Science and Information Technology. Also, you may have to do a lot of work to find all rise and falls regarding the various data of that subject. Sometimes, detailed information plays a vital role, instead of short information.

2. Evaluators are human: First thing to remember that evaluators are also human being. They are not only meant for rejecting a paper. They are here to evaluate your paper. So, present your Best.

3. Think Like Evaluators: If you are in a confusion or getting demotivated that your paper will be accepted by evaluators or not, then think and try to evaluate your paper like an Evaluator. Try to understand that what an evaluator wants in your research paper and automatically you will have your answer.

4. Make blueprints of paper: The outline is the plan or framework that will help you to arrange your thoughts. It will make your paper logical. But remember that all points of your outline must be related to the topic you have chosen.

5. Ask your Guides: If you are having any difficulty in your research, then do not hesitate to share your difficulty to your guide (if you have any). They will surely help you out and resolve your doubts. If you can't clarify what exactly you require for your work then ask the supervisor to help you with the alternative. He might also provide you the list of essential readings.

6. Use of computer is recommended: As you are doing research in the field of Computer Science, then this point is quite obvious.

7. Use right software: Always use good quality software packages. If you are not capable to judge good software then you can lose quality of your paper unknowingly. There are various software programs available to help you, which you can get through Internet.

8. Use the Internet for help: An excellent start for your paper can be by using the Google. It is an excellent search engine, where you can have your doubts resolved. You may also read some answers for the frequent question how to write my research paper or find model research paper. From the internet library you can download books. If you have all required books make important reading selecting and analyzing the specified information. Then put together research paper sketch out.

9. Use and get big pictures: Always use encyclopedias, Wikipedia to get pictures so that you can go into the depth.

10. Bookmarks are useful: When you read any book or magazine, you generally use bookmarks, right! It is a good habit, which helps to not to lose your continuity. You should always use bookmarks while searching on Internet also, which will make your search easier.

11. Revise what you wrote: When you write anything, always read it, summarize it and then finalize it.

12. Make all efforts: Make all efforts to mention what you are going to write in your paper. That means always have a good start. Try to mention everything in introduction, that what is the need of a particular research paper. Polish your work by good skill of writing and always give an evaluator, what he wants.

13. Have backups: When you are going to do any important thing like making research paper, you should always have backup copies of it either in your computer or in paper. This will help you to not to lose any of your important.

14. Produce good diagrams of your own: Always try to include good charts or diagrams in your paper to improve quality. Using several and unnecessary diagrams will degrade the quality of your paper by creating "hotchpotch." So always, try to make and include those diagrams, which are made by your own to improve readability and understandability of your paper.

15. Use of direct quotes: When you do research relevant to literature, history or current affairs then use of quotes become essential but if study is relevant to science then use of quotes is not preferable.

16. Use proper verb tense: Use proper verb tenses in your paper. Use past tense, to present those events that happened. Use present tense to indicate events that are going on. Use future tense to indicate future happening events. Use of improper and wrong tenses will confuse the evaluator. Avoid the sentences that are incomplete.

17. Never use online paper: If you are getting any paper on Internet, then never use it as your research paper because it might be possible that evaluator has already seen it or maybe it is outdated version.

18. Pick a good study spot: To do your research studies always try to pick a spot, which is quiet. Every spot is not for studies. Spot that suits you choose it and proceed further.

19. Know what you know: Always try to know, what you know by making objectives. Else, you will be confused and cannot achieve your target.

20. Use good quality grammar: Always use a good quality grammar and use words that will throw positive impact on evaluator. Use of good quality grammar does not mean to use tough words, that for each word the evaluator has to go through dictionary. Do not start sentence with a conjunction. Do not fragment sentences. Eliminate one-word sentences. Ignore passive voice. Do not ever use a big word when a diminutive one would suffice. Verbs have to be in agreement with their subjects. Prepositions are not expressions to finish sentences with. It is incorrect to ever divide an infinitive. Avoid clichés like the disease. Also, always shun irritating alliteration. Use language that is simple and straight forward. put together a neat summary.

21. Arrangement of information: Each section of the main body should start with an opening sentence and there should be a changeover at the end of the section. Give only valid and powerful arguments to your topic. You may also maintain your arguments with records.

22. Never start in last minute: Always start at right time and give enough time to research work. Leaving everything to the last minute will degrade your paper and spoil your work.

23. Multitasking in research is not good: Doing several things at the same time proves bad habit in case of research activity. Research is an area, where everything has a particular time slot. Divide your research work in parts and do particular part in particular time slot.

24. Never copy others' work: Never copy others' work and give it your name because if evaluator has seen it anywhere you will be in trouble.

25. Take proper rest and food: No matter how many hours you spend for your research activity, if you are not taking care of your health then all your efforts will be in vain. For a quality research, study is must, and this can be done by taking proper rest and food.

26. Go for seminars: Attend seminars if the topic is relevant to your research area. Utilize all your resources.

27. Refresh your mind after intervals: Try to give rest to your mind by listening to soft music or by sleeping in intervals. This will also improve your memory.

28. Make colleagues: Always try to make colleagues. No matter how sharper or intelligent you are, if you make colleagues you can have several ideas, which will be helpful for your research.

29. Think technically: Always think technically. If anything happens, then search its reasons, its benefits, and demerits.

30. Think and then print: When you will go to print your paper, notice that tables are not be split, headings are not detached from their descriptions, and page sequence is maintained.

31. Adding unnecessary information: Do not add unnecessary information, like, I have used MS Excel to draw graph. Do not add irrelevant and inappropriate material. These all will create superfluous. Foreign terminology and phrases are not apropos. One should NEVER take a broad view. Analogy in script is like feathers on a snake. Not at all use a large word when a very small one would be sufficient. Use words properly, regardless of how others use them. Remove quotations. Puns are for kids, not grunt readers. Amplification is a billion times of inferior quality than sarcasm.

32. Never oversimplify everything: To add material in your research paper, never go for oversimplification. This will definitely irritate the evaluator. Be more or less specific. Also too, by no means, ever use rhythmic redundancies. Contractions aren't essential and shouldn't be there used. Comparisons are as terrible as clichés. Give up ampersands and abbreviations, and so on. Remove commas, that are, not necessary. Parenthetical words however should be together with this in commas. Understatement is all the time the complete best way to put onward earth-shaking thoughts. Give a detailed literary review.

33. Report concluded results: Use concluded results. From raw data, filter the results and then conclude your studies based on measurements and observations taken. Significant figures and appropriate number of decimal places should be used. Parenthetical remarks are prohibitive. Proofread carefully at final stage. In the end give outline to your arguments. Spot out perspectives of further study of this subject. Justify your conclusion by at the bottom of them with sufficient justifications and examples.

34. After conclusion: Once you have concluded your research, the next most important step is to present your findings. Presentation is extremely important as it is the definite medium through which your research is going to be in print to the rest of the crowd. Care should be taken to categorize your thoughts well and present them in a logical and neat manner. A good quality research paper format is essential because it serves to highlight your research paper and bring to light all necessary aspects in your research.

INFORMAL GUIDELINES OF RESEARCH PAPER WRITING

Key points to remember:

- Submit all work in its final form.
- Write your paper in the form, which is presented in the guidelines using the template.
- Please note the criterion for grading the final paper by peer-reviewers.

Final Points:

A purpose of organizing a research paper is to let people to interpret your effort selectively. The journal requires the following sections, submitted in the order listed, each section to start on a new page.

The introduction will be compiled from reference matter and will reflect the design processes or outline of basis that direct you to make study. As you will carry out the process of study, the method and process section will be constructed as like that. The result segment will show related statistics in nearly sequential order and will direct the reviewers next to the similar intellectual paths throughout the data that you took to carry out your study. The discussion section will provide understanding of the data and projections as to the implication of the results. The use of good quality references all through the paper will give the effort trustworthiness by representing an alertness of prior workings.

Writing a research paper is not an easy job no matter how trouble-free the actual research or concept. Practice, excellent preparation, and controlled record keeping are the only means to make straightforward the progression.

General style:

Specific editorial column necessities for compliance of a manuscript will always take over from directions in these general guidelines.

To make a paper clear

- Adhere to recommended page limits

Mistakes to evade

- Insertion a title at the foot of a page with the subsequent text on the next page
- Separating a table/chart or figure - impound each figure/table to a single page
- Submitting a manuscript with pages out of sequence

In every sections of your document

- Use standard writing style including articles ("a", "the," etc.)
- Keep on paying attention on the research topic of the paper
- Use paragraphs to split each significant point (excluding for the abstract)
- Align the primary line of each section
- Present your points in sound order
- Use present tense to report well accepted
- Use past tense to describe specific results
- Shun familiar wording, don't address the reviewer directly, and don't use slang, slang language, or superlatives
- Shun use of extra pictures - include only those figures essential to presenting results

Title Page:

Choose a revealing title. It should be short. It should not have non-standard acronyms or abbreviations. It should not exceed two printed lines. It should include the name(s) and address (es) of all authors.

Abstract:

The summary should be two hundred words or less. It should briefly and clearly explain the key findings reported in the manuscript-- must have precise statistics. It should not have abnormal acronyms or abbreviations. It should be logical in itself. Shun citing references at this point.

An abstract is a brief distinct paragraph summary of finished work or work in development. In a minute or less a reviewer can be taught the foundation behind the study, common approach to the problem, relevant results, and significant conclusions or new questions.

Write your summary when your paper is completed because how can you write the summary of anything which is not yet written? Wealth of terminology is very essential in abstract. Yet, use comprehensive sentences and do not let go readability for briefness. You can maintain it succinct by phrasing sentences so that they provide more than lone rationale. The author can at this moment go straight to shortening the outcome. Sum up the study, with the subsequent elements in any summary. Try to maintain the initial two items to no more than one ruling each.

- Reason of the study - theory, overall issue, purpose
- Fundamental goal
- To the point depiction of the research
- Consequences, including definite statistics - if the consequences are quantitative in nature, account quantitative data; results of any numerical analysis should be reported
- Significant conclusions or questions that track from the research(es)

Approach:

- Single section, and succinct
- As a outline of job done, it is always written in past tense
- A conceptual should situate on its own, and not submit to any other part of the paper such as a form or table
- Center on shortening results - bound background information to a verdict or two, if completely necessary
- What you account in an conceptual must be regular with what you reported in the manuscript
- Exact spelling, clearness of sentences and phrases, and appropriate reporting of quantities (proper units, important statistics) are just as significant in an abstract as they are anywhere else

Introduction:

The **Introduction** should "introduce" the manuscript. The reviewer should be presented with sufficient background information to be capable to comprehend and calculate the purpose of your study without having to submit to other works. The basis for the study should be offered. Give most important references but shun difficult to make a comprehensive appraisal of the topic. In the introduction, describe the problem visibly. If the problem is not acknowledged in a logical, reasonable way, the reviewer will have no attention in your result. Speak in common terms about techniques used to explain the problem, if needed, but do not present any particulars about the protocols here. Following approach can create a valuable beginning:

- Explain the value (significance) of the study
- Shield the model - why did you employ this particular system or method? What is its compensation? You strength remark on its appropriateness from a abstract point of vision as well as point out sensible reasons for using it.
- Present a justification. Status your particular theory (es) or aim(s), and describe the logic that led you to choose them.
- Very for a short time explain the tentative propose and how it skilled the declared objectives.

Approach:

- Use past tense except for when referring to recognized facts. After all, the manuscript will be submitted after the entire job is done.
- Sort out your thoughts; manufacture one key point with every section. If you make the four points listed above, you will need a least of four paragraphs.

- Present surroundings information only as desirable in order hold up a situation. The reviewer does not desire to read the whole thing you know about a topic.
- Shape the theory/purpose specifically - do not take a broad view.
- As always, give awareness to spelling, simplicity and correctness of sentences and phrases.

Procedures (Methods and Materials):

This part is supposed to be the easiest to carve if you have good skills. A sound written Procedures segment allows a capable scientist to replacement your results. Present precise information about your supplies. The suppliers and clarity of reagents can be helpful bits of information. Present methods in sequential order but linked methodologies can be grouped as a segment. Be concise when relating the protocols. Attempt for the least amount of information that would permit another capable scientist to spare your outcome but be cautious that vital information is integrated. The use of subheadings is suggested and ought to be synchronized with the results section. When a technique is used that has been well described in another object, mention the specific item describing a way but draw the basic principle while stating the situation. The purpose is to text all particular resources and broad procedures, so that another person may use some or all of the methods in one more study or referee the scientific value of your work. It is not to be a step by step report of the whole thing you did, nor is a methods section a set of orders.

Materials:

- Explain materials individually only if the study is so complex that it saves liberty this way.
- Embrace particular materials, and any tools or provisions that are not frequently found in laboratories.
- Do not take in frequently found.
- If use of a definite type of tools.
- Materials may be reported in a part section or else they may be recognized along with your measures.

Methods:

- Report the method (not particulars of each process that engaged the same methodology)
- Describe the method entirely
- To be succinct, present methods under headings dedicated to specific dealings or groups of measures
- Simplify - details how procedures were completed not how they were exclusively performed on a particular day.
- If well known procedures were used, account the procedure by name, possibly with reference, and that's all.

Approach:

- It is embarrassed or not possible to use vigorous voice when documenting methods with no using first person, which would focus the reviewer's interest on the researcher rather than the job. As a result when script up the methods most authors use third person passive voice.
- Use standard style in this and in every other part of the paper - avoid familiar lists, and use full sentences.

What to keep away from

- Resources and methods are not a set of information.
- Skip all descriptive information and surroundings - save it for the argument.
- Leave out information that is immaterial to a third party.

Results:

The principle of a results segment is to present and demonstrate your conclusion. Create this part a entirely objective details of the outcome, and save all understanding for the discussion.

The page length of this segment is set by the sum and types of data to be reported. Carry on to be to the point, by means of statistics and tables, if suitable, to present consequences most efficiently. You must obviously differentiate material that would usually be incorporated in a study editorial from any unprocessed data or additional appendix matter that would not be available. In fact, such matter should not be submitted at all except requested by the instructor.

Content

- Sum up your conclusion in text and demonstrate them, if suitable, with figures and tables.
- In manuscript, explain each of your consequences, point the reader to remarks that are most appropriate.
- Present a background, such as by describing the question that was addressed by creation an exacting study.
- Explain results of control experiments and comprise remarks that are not accessible in a prescribed figure or table, if appropriate.
- Examine your data, then prepare the analyzed (transformed) data in the form of a figure (graph), table, or in manuscript form.

What to stay away from

- Do not discuss or infer your outcome, report surroundings information, or try to explain anything.
- Not at all, take in raw data or intermediate calculations in a research manuscript.
- Do not present the similar data more than once.
- Manuscript should complement any figures or tables, not duplicate the identical information.
- Never confuse figures with tables - there is a difference.

Approach

- As forever, use past tense when you submit to your results, and put the whole thing in a reasonable order.
- Put figures and tables, appropriately numbered, in order at the end of the report
- If you desire, you may place your figures and tables properly within the text of your results part.

Figures and tables

- If you put figures and tables at the end of the details, make certain that they are visibly distinguished from any attach appendix materials, such as raw facts
- Despite of position, each figure must be numbered one after the other and complete with subtitle
- In spite of position, each table must be titled, numbered one after the other and complete with heading
- All figure and table must be adequately complete that it could situate on its own, divide from text

Discussion:

The Discussion is expected the trickiest segment to write and describe. A lot of papers submitted for journal are discarded based on problems with the Discussion. There is no head of state for how long a argument should be. Position your understanding of the outcome visibly to lead the reviewer through your conclusions, and then finish the paper with a summing up of the implication of the study. The purpose here is to offer an understanding of your results and hold up for all of your conclusions, using facts from your research and generally accepted information, if suitable. The implication of result should be visibly described. Infer your data in the conversation in suitable depth. This means that when you clarify an observable fact you must explain mechanisms that may account for the observation. If your results vary from your prospect, make clear why that may have happened. If your results agree, then explain the theory that the proof supported. It is never suitable to just state that the data approved with prospect, and let it drop at that.

- Make a decision if each premise is supported, discarded, or if you cannot make a conclusion with assurance. Do not just dismiss a study or part of a study as "uncertain."
- Research papers are not acknowledged if the work is imperfect. Draw what conclusions you can based upon the results that you have, and take care of the study as a finished work
- You may propose future guidelines, such as how the experiment might be personalized to accomplish a new idea.
- Give details all of your remarks as much as possible, focus on mechanisms.
- Make a decision if the tentative design sufficiently addressed the theory, and whether or not it was correctly restricted.
- Try to present substitute explanations if sensible alternatives be present.
- One research will not counter an overall question, so maintain the large picture in mind, where do you go next? The best studies unlock new avenues of study. What questions remain?
- Recommendations for detailed papers will offer supplementary suggestions.

Approach:

- When you refer to information, differentiate data generated by your own studies from available information
- Submit to work done by specific persons (including you) in past tense.
- Submit to generally acknowledged facts and main beliefs in present tense.

THE ADMINISTRATION RULES

Please carefully note down following rules and regulation before submitting your Research Paper to Global Journals Inc. (US):

Segment Draft and Final Research Paper: You have to strictly follow the template of research paper. If it is not done your paper may get rejected.

- The **major constraint** is that you must independently make all content, tables, graphs, and facts that are offered in the paper. You must write each part of the paper wholly on your own. The Peer-reviewers need to identify your own perceptive of the concepts in your own terms. NEVER extract straight from any foundation, and never rephrase someone else's analysis.
- Do not give permission to anyone else to "PROOFREAD" your manuscript.
- **Methods to avoid Plagiarism is applied by us on every paper, if found guilty, you will be blacklisted by all of our collaborated research groups, your institution will be informed for this and strict legal actions will be taken immediately.)**
- To guard yourself and others from possible illegal use please do not permit anyone right to use to your paper and files.

CRITERION FOR GRADING A RESEARCH PAPER (COMPILATION)
BY GLOBAL JOURNALS INC. (US)

Please note that following table is only a Grading of "Paper Compilation" and not on "Performed/Stated Research" whose grading solely depends on Individual Assigned Peer Reviewer and Editorial Board Member. These can be available only on request and after decision of Paper. This report will be the property of Global Journals Inc. (US).

Topics	Grades		
	A-B	C-D	E-F
<i>Abstract</i>	Clear and concise with appropriate content, Correct format. 200 words or below	Unclear summary and no specific data, Incorrect form Above 200 words	No specific data with ambiguous information Above 250 words
<i>Introduction</i>	Containing all background details with clear goal and appropriate details, flow specification, no grammar and spelling mistake, well organized sentence and paragraph, reference cited	Unclear and confusing data, appropriate format, grammar and spelling errors with unorganized matter	Out of place depth and content, hazy format
<i>Methods and Procedures</i>	Clear and to the point with well arranged paragraph, precision and accuracy of facts and figures, well organized subheads	Difficult to comprehend with embarrassed text, too much explanation but completed	Incorrect and unorganized structure with hazy meaning
<i>Result</i>	Well organized, Clear and specific, Correct units with precision, correct data, well structuring of paragraph, no grammar and spelling mistake	Complete and embarrassed text, difficult to comprehend	Irregular format with wrong facts and figures
<i>Discussion</i>	Well organized, meaningful specification, sound conclusion, logical and concise explanation, highly structured paragraph reference cited	Wordy, unclear conclusion, spurious	Conclusion is not cited, unorganized, difficult to comprehend
<i>References</i>	Complete and correct format, well organized	Beside the point, Incomplete	Wrong format and structuring
