Inspecting the Dynamics Leading towards Credit Card usage: An Empirical Inquiry form Pakistan's Credit Card Industry

By Syed Faheem Hasan Bukhari, Ayesha Ismail, Fareed Shaukat Memon & Malick M. Abu Rehan Alvi

SZABIST, Karachi

Abstract- The aim of this research is to identify the factors responsible for the usage and adoption of credit card. It's an explanatory research, structured questionnaire was used to collect the data. Moreover, non-probability convenience sampling method was used. Research findings indicates that awareness has the highest impact in creating a huge market for credit card. Also, cost factor is correlated with the usage of credit card; there exists a relationship between these two variables. Moreover, the providers of this service should lower the interest rate. The facilities provided by the bank like easy access to money, availability of cash and international acceptance is another feature that should be more focused. Individual's life style and religious aspect has the lowest impact and have the weakest relation with the usage of credit cards. This research will help the consumer bankers, to develop an improved product proposition and better communication plan.

Keywords: credit card, consumers, awareness, card features, credit limit, interest rate, religious beliefs, functional dimensions, payment & socio psycho.

Introduction

redit card is a beneficial financial instrument which helps consumers to get financial resources for current consumption redeemable in future date. The first type of credit card was made on 8thFebruary, 1950. It was known as the Diners club card. These diners card were used for the credit purchase which was issued in the early twentieth century in the USA. These cards were basically used for travelling and entertainment purpose. Later on it gave the idea of an international card that can be used for credit purchase around the world. Due to this, credit card emerged at a very fast pace around the globe. Most of the studies on credit cards have been done in developed economies. Credit cards are popular as a medium for exchange of transactions. Credit cards make it easy for the household and personal spending to take place even in many developing countries (Watkins, 2000). The benefit of using credit card which attracts most of the customers is its acceptability around the globe. It also relieves the need to carry much cash, maintains an accurate purchase record, facilitates refunding of

merchandize, it entertains customers by awarding attractive reward points which can be redeemed and in case of theft it gives an option to reverse the transaction.

Apart from all the benefits listed above there is a major drawback of credit card is that it leads to a common habit known as "Compulsive Buying". Consumers of credit cards become victim of excessive purchase on debt that has an adverse impact such as addictive shopping and unnecessary debt. Multiple research proved that a card holder would spend more compared to using cash in an identical situation (Feinberg R. A., 1986), (Hirschman, 1979), (Prelec & Semeter, 2001). Though it facilitates the benefit of delaying payments, but these delays or default ends up with a penalty of huge interests which piles up your payments. Mismanagement and Misuse of this facility is a major downside. The worst case scenario of this debt can take months, years or even decades to overcome the financial burden. According to the USA Federal Reserve Board's Survey of 2007 related to Consumer Finance, 46.1% of families carry these kinds of credit debts. The result of this debt leads to bankruptcy. For instance in the year 2009-2010 the personal bankruptcy filing was about 1.6 million but it is down by 12% in the year 2013 from its previous year and the statistics show that the current personal bankruptcy is around 1.1 million. (States, 2009-2013).

This is why most consumers refer credit cards as debt trap rather than looking at it as an ease. (Sudhagar, July - Aug, 2012). The high use of credit card led the people in failing to pay their debts and interest, which were seen as a huge factor in changing the perception and usage pattern of card holders.

a) Problem Settings

The trend of credit purchase was started by retail stores and oil companies worldwide who helped in identifying their customers and increase their sales. (ScottIII, 2007). A trend that evolved by the retail stores and oil companies is now major medium of transaction for the household and personal spending worldwide (Warwick & Mansfield, 2000). It has evolved to such an extent that the credit card now even dominates the virtual world as a major source of financial transactions (Thomas, Oliver, & Hand, 2005).

International market for credit card is growing constantly over the period. Banks sold \$5.5 billion of credit card portfolio alone in year 2010. (NEESON, January 2012). Credit card business has been proved to be a very profitable business for banks all over the world. North American credit card industry, with a customer base of 600 million people, earned a total of 895 million pre-tax profits in year 2009. (NEESON, January 2012). On the other hand, Europe experienced a declining trend in the profit pools. Western Europe market fell by 30 percent from 2008 to 2009 totaling \$6.9 billion.

Middle East which is both economically and culturally diversified faced a major challenge of credit card defaulters. The two largest consumer markets of credit cards include South Africa and UAE faced a credit loss of 9.5% and 18%, in 2009 respectively. In the race to occupy a larger market share of credit consumers, they reduced their policies and even offered their services to expatriate. During the economic crisis these expatriates were forced to leave their job and the country, so they defaulted on their debt payments which resulted in the huge loss of 2009 (NEESON, January 2012).

In Asia pacific, credit card business is even more lucrative. Hong Kong, with only 7 million consumer base, earned a total of 725 million pre-tax profits. (NEESON, January 2012) This demographics shows that there is large business potential for credit cards in Developing regions of the world including Pakistan and India. It has been found that Indian credit card market has shown a growth of 30 – 40 percent annually. Furthermore the number of credit card holders is 27.5 million reported by the credit card issuers (Sudhagar, July - Aug, 2012). There is a new force in credit card market with the presence of internet and online purchasing. People use credit cards for their online payments.

b) Credit Card Industry Outlook | Pakistan Perspective

The penetration rate in Pakistan has been very low given that is it in the market for over 20 years. Initially credit cards all over the world was targeted to the elite class and so was the case in Pakistan which slowed its growth rate as the population of high income class in Pakistan is less than 10%. Owning a credit card during that time was considered as a symbol of royalty. But recently, extending middle class in Pakistan shows a large potential for credit card market. The right path to approach that middle class is proper image building and awareness of credit card services to potential consumers.

The trend has been changing over the period. There are wide number of credit card users in Pakistan. An estimate tells that total number of credit card holders in Pakistan is about 22 hundred thousand, in which 9hundred thousand are active users. There are number

of foreign and local banks which are providing their services in this regard. Habib Bank pioneered the launch and introduced a gold card in Pakistan which proved to be unsuccessful. Allied bank then followed the trend and reintroduced credit card as Master Card but also failed in attracting attention. In the year 1994 Citibank revolutionized the market by introducing its credit card known as the Visa Card. This was the turning point for the credit card industry in the history of Pakistan. Awareness was created about plastic money among the people of Pakistan. (Khalid, Butt, Murtaza, & Khizar, 2013). Today, nearly all banks offer credit card services to its customers.

In this research, consumer perceptions, understanding and perception about credit card and its services are studied. Customers tend to use those products which, in their perception, add value to their lives. The value that credit card provides focus on using future cash flow in present time with interest fee. Stavins signifies that consumers are sensitive not only to the fee(interest rates) of credit card usage but also to the value of other enhancements like frequent use awards, extended warranties, expedited dispute resolution or automobile rental insurance. (Stavins, 1996) Our research will cover almost every area that would enrich the user experience of credit card usage and, ultimately, increase the volume credit card transactions.

In Pakistan, people are more attracted toward use of Debit cards than that of credit card. We will study credit card usage and adoption in order to find out the psychological, cultural and functional barriers that a potential consumer or credit card holder would face. Trends in Pakistan are being changed as there is more diffusion of internet and globalization in the country. The country is more open to international trade which ensures economic stability and cultural transformation in the country. A big chunk of people can afford global life style in this developing part of the world. People are using electronic banking for their day to day transactions due to its high convenience and 24/7 availability. There is high use of debit card in Pakistan i.e. 235.25 billion in FY2010 as compared to only 17 billion uses credit cards in the same year. This shows a wide difference in these two closely related instruments (Dar, 2010). The difference shows that there is negative psychology toward credit card usage despite of its convenience as compared to rigid domain of debit card.

c) Research Objectives

- Ascertain the awareness of credit card among the users
- Determine the extent to which interest payments lead in resisting the adoption of credit cards.
- Analyze the impact of security and availability of cash on its credit card holders.

- Examine the influence of lifestyle on the usage and adoption of credit cards.
- Identify how religious belief drives away from credit card practices.

II. LITERATURE REVIEW

a) Credit Card Orientation, Product, History

Credit card is the product that allows its users to borrow money for payment from a merchant and pay back in future date. Credit card is an automated way to offer consumers credit that would be paid by banks. Credit cards were firstly evolved after 1920 when oil companies and other big firms started issuing cards which ensure future payment by the consumers. (Encyclopedia britannica, n.d.) But its wide use started from 1938 when companies started accepting each other's' cards. (Belis, n.d.) Banks started issuing credit cards in year 1946, when John Biggins of the Flatbush National Bank of Brooklyn launched its first credit card. With the evolution of modern technologies. Credit cards were issued in Plastic hard card which bears particular numeric values contains 16 digits. It includes user's information which is directly connected with main database of the company. The barcode stripe is detected by the detecting skimmers which are placed by the banks and it consists of user information.

Numerous researches have been done on the frequent use and adoption of credit card internationally but there are limited researches conducted on the low usage of plastic money in a developing country like Pakistan and the gap is yet to be identified. This provides us with an opportunity to identify why people are reluctant in adopting plastic money even though it offers many features and benefits.

b) Developed Countries

In most of developed countries the usage of credit card has been high compared to the developing countries. They act as a vital payment tool for the consumers all over the world (Feinberg A.1986), (Brenthal, Crockett, & Rose, 2005). American Banker Association estimated that every second around 10,000 payment card transactions are made all over the world. In the past ten years the value and amount of card based payments has accelerated in various developed countries such as US, U.K (Settlements, 2003), (Klee, 2006). Consumers are more likely to pay for their groceries with credit card in various supermarkets such as Tesco, Asda and Sainsbury (Guibourg & Segendorff, 2007), (Humphrey, Willesson, Bergendahl, & Lindbolm, 2006), (Amromin & Chakravorti, 2009)indicates that the use of cash has declined in many countries and there is a significant drop off. A research done on the credit card usage among the affluent users in China concludes that the Chinese are comfortable being accompanied by using credit card (Wothington, Stewart, & Lu, 2007).

c) Credit card usage in Pakistan

Credit card was launched in Pakistan by HBL but it gained recognition after 1990's with the launch of Citibank Pakistan Visa Card. (KeithTimimi, 2010) after successful launch of credit card by Citibank, Muslim commercial bank also followed the example. Nearly all banks in Pakistan offer credit cards to their users. These banks include Allied bank, National Bank, HSBC, Standard chartered bank, and HBL. (KeithTimimi, 2010)Today credit card has large base of consumers. A big chunk of finance resources has been invested on credit cards.

d) Theory on usage of Banking Products

The importance of credit cards, both as a payment and short-term financing medium to today's consumers, is no longer debatable (Chakravorti & Emmons, 2000); (Hayhoe, Leach, Turner, Bruin, & Lawrence, 2000)But, in contrast, users of financial services are usually cautious about new financial utility because of hidden charges, high cost and high induced demand by its users.

Their fears are valid, as finance is the most delicate and crucial aspect of one's life. In case of Credit card, its usage is the function of consumer own choice rather than by induced demand created by credit card issuer through advertising. According to Thomas, Ninety percent of respondent agree to some extent that overspending cause by credit card usage is due to consumers' side not of card issuer. (Thomas A. Durkin, 1970–2000). In this way it is established that credit card issuers have not to worry about drawing more credit by credit card users in short times. The whole discussion establishes the fact that if a user is clear about the right usage of credit card for their financial well-being, issuers are not required to induce any demand in the form of advertising. The critical role in credit card usage plays by the awareness in consumers about its utility.

A number of factors have been identified based on the previous literature. This study comprises of various variables which plays a substantial role and influences the consumer to adopt plastic money. The factors are classified into five categories. These categories include Awareness, Function, Cost, Lifestyle and Religious belief which leads to the usage and adoption of credit cards in context to Pakistan.

e) Awareness of Credit Card

Awareness of any product plays a vital role in purchasing and consumption behavior of consumers. There is usually a positive relationship between awareness and usage of product. (Khalid, Safdar Butt, & Murtaza, Perceived Barriers in the Adoption & Usage of Credit Cards in Pakistan Banking Industry, March, 2013). According to Delener, promotion of credit card services is very necessary to boost its usage especially among Hispanic and Asian consumers. (Delener & Katzenstein, 1994). There must be awareness programs

that enable consumers to think about these products in new ways. We can see that big organizations or even small SMEs use credit as their potential way to growth in competitive markets. The same concept can also be valid on individual consumers, who could enhance their life style and aptitude by using financial instruments for their financial needs.

The lower level of awareness is the foremost reason for consumers' turnover. Consumers, in the end, are amazed at different charges inflicting upon them at the end of year. Therefore, Durkin insists that users of credit card must be informed thoroughly in the time of issuance. (Durkin & Price, 2000) This approach really help consumer in setting their mindset that prevent any future misconception over fee and interest rate costs. Awareness is the keyword that would decrease the consumer turnover and increase the credit card usage volume in the long run.

f) Functional dimensions

According to Chakarvarti, Credit card is widely accepted among the consumers due to the convenience it provides to its users. Credit card had lowered the popularity of carrying cash, checks, and disbursement/transaction mechanisms. (Chakravorti & Emmons, 2000)Over the time Credit card has turned into more extensive use by financial transaction over telephone and internet. Consumers enjoy payment facilities that are offered by plastic cards which are more rapid and convenient when compared to cash (Klee, (Borzekowski, Kiser, & Ahmed, Furthermore the speed of transaction, records of transaction, reliability, dispute resolution and ease of use have a huge impact and influences the adoption of credit cards (Amromin & Chakravorti, 2009) (Jonker & Kosse, 2013).

It was noted that consumers greatly prefer these factors that is the speed, security and convenience that are offered by plastic money and they do not have the need to carry cash anymore (Wothington, Stewart, & Lu, 2007), (Chirapanda & Yoopetch, 2008).

(Chan, 1997) identified that non-monetary benefits have an impact on usage of credit cards. He defined the non-monetary benefits as ancillary functions such as the benefit of ATM services at various locations. He suggested that card issuing company should provide a better service regarding the complaints of their customers.

The geographic dispersion of ATM's also influences the consumer towards adoption of credit cards (Berger & DeYoung, 2006). By introducing ATM technologies, banks have been successful in attracting customer towards adopting credit cards (Markose & Loke, 2003). Various studies have been done on the consumer's perception in using credit cards, some researchers are of the view that plastic cards enable the

customers to pay their bills, get free access to ATM and manage their budget on their spending (Soman, 2001) (Massoud & Bernhardt, 2006), yet others are of the view that customer feels uncomfortable while using credit cards (Lin, Shih, & Sher, 2007).

A survey conducted by (usage and attitude survery about credit and T & E cards, 1990) which was on Greek card holder's attitude towards credit card. The cardholders were found with both positive and negative attitudes. The most positive attitude was from the need to not carry cash which provided an additional safety. Another positive attitude was from the availability of foreign currency. However the disadvantage was the fear of fraud such as card could be stolen/misplaced and misused. The perception that easy availability of money leads to an excessive purchase is another negative attitude.

g) Cost - Interest, Payback time

According to Stavins, consumers are more sensitive toward interest rates on Credit card purchasing along with offers, and gift prizes that automobile or other companies give on usage of particular brand of credit card, which the banks have been using as promotion of their product. (Jonah, 1996)But, on the other hand, Ausubel proves that interest rate is not a determining factor in purchasing pattern through Credit Card. (Ausubel & Lawrence, 1991). By above argument we could deduct that interest rates are important in choosing a certain brand of credit card but availing credit on credit card (while purchasing) is not affected by fluctuation in interest rates. The main challenge for bankers is to keep their interest rate lower and clear enough that consumers feel confidence in availing the opportunity that is offered by the credit card issuer.

Consumers of banking services in Pakistan have yet to realize the potential of credit card utility to them. Many past consumers have forfeited the use of credit card because of high interest rates fees and lack of confidence in electronic banking system. The fear of high interest rate charging is one of the greatest distress that credit card users experience all over the world. In USA, the most developed nation, most of credit cards (around 80 percent) believe that percentage rates on outstanding balances are too high. (Thomas A. Durkin, 1970–2000)

Credit card users generally perceive the use of credit card as a financial burden rather a facilitating tool for their financial needs. There is plenty of research which is oriented to know the basic problems faced by credit card users in the form of high fees. High cost of credit card can be bifurcated into following dimensions,

h) Interest rates

Interest rate serves as one of the most negative motivator for credit card use. Consumers are usually unresponsive to high interest rates (Lawrence, 1991) but they are reluctant to use credit card due to increased

debt in long term. A researcher is of suggestion that government should imply an interest cap on credit card outstanding amount. (Chirapanda & Yoopetch, 2008) This interest cap could be the positive reinforcement for credit card consumers. Otherwise an increase in interest rate cause an immediate increase in debt (gross & Souleles, NBER working papaer series) and therefore play a negative part in credit card usage in long term.

i) Annual fee

An annual fee is also charged by issuer of credit card in addition to interest fee for credit card services. The yearly charging also affects the selection of a particular credit card brand. Normally high annual fee discourage consumers to use a particular credit card or premium offers on credit card by the same issuer. (Chirapanda & Yoopetch, 2008)

i) Credit limit

Credit limit is the tool by which issuer make sure that there credit would be recovered in following time period and consumers would not exceed taking loans out of its credit worthiness. Normally high credit limits on one's credit card induce consumers to a particular brand. (Chirapanda & Yoopetch, 2008)

k) Switching Cost

According to Ansubel, Credit card issuers exercise market power due to the fact that consumers are usually unresponsive to higher interest rate. (Ausubel & Lawrence, 1991)

I) Impact of consumer Life style on credit card adoption

Consumer life style has a high impact on credit card purchasing behavior. Credit card usage is not only preferable for high class, but for middle and lower middle classes too. One study shows that low income users use credit card for future installment features and credit availability rather than for safety, convenience or identification purposes. (Jeans, 1979) Previous researchers have found that the card users are divided among two types of holders. Those who use credit card for the convenience purpose (transactor), whereas others use it for the benefit of easy installments and emergency purposes only (revolver) (Wothington, Stewart, & Lu, 2007).

These cards were classified based on their users and were divided into two categories that is Main card and Subsidiary card. Main card represents those who use often and for the purpose of convenience whereas subsidiary card represents those who use less often and only when the occasion arises that is emergency purposes (Devlin, Wothington, & Gerrard, 2007).

(Gan, Mayrami, & Koh, 2008) classified users into high socio class and low socio class. High socio class find it convenient to transact through credit card rather than paying cash and low socio class use it for

financing purpose. It was concluded by (Plummer, 1971) that lifestyle played a vital role in directing the usage of credit card. According to him demographic was the key driver, as people with high income, well education, middle aged and professional fragment are more likely to adopt for their day to day transaction. The latest fashion, technologies and gadgets has driven the younger generation towards a high life style. They are more inclined towards unnecessary shopping to remain up to date with latest trends (Hausman, 2000). Young adults are brand conscious and tend to spend more on luxury item and dispensable good, so credit card gives them the option of having easy money (Yang, 2007). Thus the luxurious life style of today's youth has led to the high usage of credit card. Concluded by (Devlin, Wothington, & Gerrard, 2007) that about 7% of the total population was using their cards more frequently because of the attractive design of the card that pleased them.

m) Religious belief

Credit card usage is also affected by the religious and cultural factors. Religious controversies over interest rates influence the behavior of potential consumer of credit card, especially in Pakistan. Moreover, being in debt has also had a negative attribution in Pakistani culture. (Afshan, Ayesha Amanullah, & Madiha, 2009).

Key principle of Islam prohibits usury (Riba); there have been many debates on whether credit cards are acceptable if the consumer pays their due amount before interest is charged on the credit purchase, which would avoid paying interest. The other debate states that usage of credit card is prohibited even if the holder pays his due amount before the interest is charged. Due to this prohibition of interest, the concept of Islamic Banking has emerged, which provides Riba free services to Muslims (Rahman, 2003). Hence religion has an impact on the usage of credit card as Pakistanis being Muslim tends to avoid the merger of interest in their earnings.

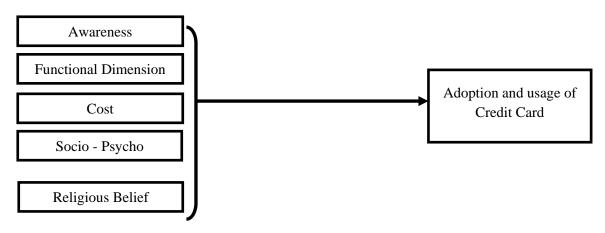

Figure 1: Conceptual Framework

III. RESEARCH DESIGN

In order to achieve the objectives, research design acts as a blue print and guides the researcher. This research is Quantitative in nature and Explanatory approach is used. The reason of using an explanatory approach is that it helped in clarifying the misconception of credit cards among its holders. With the help of statistical tools we adopted and modified the close ended questionnaires that helped us in quantifying our research.

a) Population

The total Population of Pakistan is 220 million. Out of which 2.6 million are having a bank account in a commercial bank. These figures are available on the website of State bank of Pakistan. Among these 2.6 million bank accounts holders, only 0.9 Million are active credit card users. The population for our research is the active as well as inactive card holders. We conducted the research within the geographical boundary of Karachi. The reason for choosing Karachi as the city is that, it is within our reach and because of the budget constraint to keep the cost within our feasibility.

b) Sample and Sampling Method

Quantitative studies usually have a larger sample size as compare to the Qualitative studies. We have used a sophisticated approach of calculating the sample size which is the Confidence Interval Approach at a ±10% margin of error with 95% confidence level which gave us a sample size of 96. However we distributed around 105 questionnaires as we were not sure how many individual will respond, so just to be on the safe side we distributed a few more than the targeted number. The random sampling method is used with close ended questionnaires which were provided to the active and inactive credit card users to find out the underlying factors that lead them towards the usage or adoption of credit cards or drive them away from using the credit cards. The participants are selected on the basis of Random sampling approach under NonProbability sampling techniques which was done on the basis of convenient sampling. The reason for selecting this approach is that we approached those individual who were within our geographical boundary and were easily accessible and available.

c) Research Instrument

Primary as well as the secondary data was used. Primary data was collected by approaching the banks and credit card holders. It was collected by one on one interaction with active users and inactive users. Close ended questionnaire and survey are used as data collection instrument in order to collect primary data. The nature of the questionnaire is unbiased and specific in nature and is more cost effective and is suitable for the studies of large sample size in comparison to interviews. The questionnaire is divided into two parts; the first part consists of the demographics, which helped us in identifying the type of users of credit cards i.e. the credit card market. The second part consists of 19 statements that includes independent and dependent variables on Likert scale ranging from 1 to 5. 1 is for Strongly Disagree and 5 is for Strongly Agree. These questions were asked from the selected sample. The questionnaire is adopted from the literature review and is further modified by adding some questions that covers the aspect of our research. Whereas secondary data is collected from published article journals posted on the internet.

d) Research Hypothesis

- $H_{\rm A}$: Awareness has a positive impact on the usage and adoption of credit cards.
- $H_{\rm A}$: If Functional dimension is high it has an impact on the usage of credit cards.
- H_{A} : The greater the cost the lower the usage of credit card
- H_A : Religious belief has a negative relation with adoption of credit cards.
- $H_{\mathbb{A}}$: Socio Psycho has a positive relation with usage and adoption of credit cards.

IV. RESULTS FINDINGS AND ANALYSIS

a) Reliability

Case Processing Summary

		N	%
Cases	Valid	26	96.3
	Excluded ^a	1	3.7
	Total	27	100.0

a. Listwise deletion based on all variables in the procedure.

Reliability Statistics

Cronbach's Alpha	N of Items
.885	19

The Reliability test helps in measuring the degree to which the variables and results are unbiased. It helps in determining the consistency among the various variables that are Awareness, Cost, Functional Dimension, Religious Belief and Socio-psycho. Hence Cronbach's Alpha is used for the measurement of reliability and consistency. The above results show that we have obtained the value of Cronbach Alpha of 0.885. The minimum desired value should be 0.7. Hence the reliability and consistency of the statistical data is

proved to be very high. The results of the study provide evidence of the construct validity of the test as the study measure the constructs that theoretically linked with each other and the construct which are not theoretically related with each other, in fact observed to be linked that means there are convergent between the similar constructs, and also observed to not be linked that reflect the discrimination between the dissimilar constructs.

b) Descriptive Analysis

Descriptive Statistics

	Descriptiv				
	N	Minimum	Maximum	Mean	Std. Deviation
Lower the Probability (U)	103	1	5	3.55	1.398
Leads to overspending (U)	103	1	5	3.83	1.344
Ease of Pavment (U)	103	1	5	4.13	1.126
Fault of customer (A)	103	1	5	4 02	1 244
Lack of information (A)	103	1	5	3.62	1.173
Complexity of information (A)	103	1	5	3.66	1.090
Insufficient Credit limit (C)	103	4	5	3.11	1.275
High interest Rate (C)	103	1	5	3.81	1.197
Long Application approval (C)	103	1	5	3.47	1.092
Outstanding Balance (C)	103	1	5	3.26	1.212
Stolen Card (F)	103	1	5	2.88	1.140
Online Payments (F)	103	1	5	3.83	1.172
Wide acceptance (F)	103	1	5	3.97	1.080
Against Islamic Value (R)	103	1	5	3.06	1.399
Avoid interest (R)	103	1	5	3.48	1.420
Negative Debt attribution (R)	103	1	5	3.44	1.391
Islamic Bank over Conventional (R)	103	1	5	2.98	1.414
Luxury Purchase (S)	103	1	5	3.73	1.262
Emergency Purchase	103	1	5	4.46	.968
Valid N (listwise)	103				

The descriptive analysis above shows that the mean of all the variables is above 3, that means the population that we selected for our research is agreeable with the research that we are conducting and have mostly agreed, whereas the guestion related to Islamic Bank over Conventional with a mean of 2.98 shows that the population have mostly responded with Neutral answer.

The Standard Deviation on the other hand which is above 0.5, shows that the opinion of our population varies a lot, this may be due to taking a very diverse population from different sector that resulted in variation of responses. Here it is rightly said that the distribution is slightly diverse

c) Correlations

Correlations

		Usage	Awareness	Cost	Functional Dimension	Religious belief	Socio_Psycho
Usage	Pearson Correlation	1	.492**	.358**	.472**	.247*	.248*
	Sig. (2-tailed)		.000	.000	.000	.012	.011
	N	103	103	103	103	103	103

- **. Correlation is significant at the 0.01 level (2-tailed).
- *. Correlation is significant at the 0.05 level (2-tailed).

d) Awareness

Since the significance level is 0.01 & the correlation is 0.492 we have enough evidence to reject the null hypothesis. The results reflect that as the awareness regarding the credit cards increases, the usage of credit cards will also be augmented and vice versa. Therefore there is a positive relationship between Awareness of credit card with its usage.

e) Cost

Since the significance level is 0.01 & the correlation is 0.358. This shows that cost is positively correlated with the adoption and usage of credit card. This show that there is a positive relationship between the two variables and both the variables are correlated. Change in cost will affect the usage and adoption of the credit cards.

Functional Dimension

The level of significance is at 0.01 & correlation is 0.472. This shows that Functional Dimension is

Regression

positively correlated with adoption and usage of credit card. Function has a high impact on credit cards usage.

g) Religious Belief

Since the Significance level is at 0.05 & the correlation is 0.247. This shows that religious belief has an impact on the Usage of credit card but not to the higher extent. This means that the change in one variable is not highly correlated with the change in another variable. It shows that there is an existence of relationship between the two variables.

h) Socio Psycho

Since the significance level is at 0.05 & correlation is 0.248. We have enough evidence to reject the null hypothesis means there is an existence of positive relationship between socio psycho and usage of credit cards. The statistics above perhaps indicate that the variables are not highly correlated but they share the positive bonding.

Model Summary

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate	
1	.581ª	.337	.303	.81734	

a. Predictors: (Constant), Socio_Psycho, Religious_belief, Cost, Awareness, Functional_Dimension

ANOVA^b

Model		Sum of Squares	df	Mean Square	F	Sig.
1	Regression	32.947	5	6.589	9.864	.000ª

Residual	64.801	97	.668		
Total	97.748	102		l	

a. Predictors: (Constant), Socio_Psycho, Religious_belief, Cost, Awareness, Functional_Dimension

b. Dependent Variable: Usage

Coefficients^a

				Standardized Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	.787	.491		1.604	.112
	Awareness	.370	.115	.327	3.225	.002
	Cost	.321	.104	.293	3.077	.003
	Functional Dimension	.290	.117	.255	2.471	.015
	Religious belief	.104	.082	.113	1.276	.205
	Socio_Psycho	002	.098	002	025	.980

a. Dependent Variable: Usage

The table shows that our R is 0.581 that means high degree of relation among the variables. The independent variables in the model are explaining 33.7% impact on Usage and Adoption of Credit card in Pakistan

The F over here is greater than 2 which is 9.864 is significant at the 0.001. This show's that our model fits the population.

The coefficient |t| is greater than 2. We have confidence in the alternative hypothesis.

It is also evident that the highest beta is of awareness that is 0.370 with a significance level of 0.002. It has the highest significance level as compare to the rest of the independent variables. This means that awareness has the highest impact or is the most important element in the understanding and perception building of credit cards. The |t| of awareness is 3.225 which is greater than two, hence the null hypotheses is rejected. This shows that awareness has a positive impact on the usage and adoption of credit cards. And Awareness has a positive impact on the usage and adoption of credit cards has been proved from the results.

Whereas socio psycho has a negative relation with usage of credit card but with the significance level of 0.980 it implies that it isn't an important element to provide a reason for the usage of credit card. Hence we have enough evidence to accept the null hypothesis.

The positive of 0.290 beta of Functional Dimension with the significance level of 0.015 indicates that higher the facilities offered by the bank higher will be the adoption and usage of credit cards. The |t| of functional dimension is 2.471 which is greater than 2,

hence, we have enough evidence to reject the null hypotheses. So it has been proved that if Functional dimension is high it has an impact on the usage of credit cards.

Whereas Cost has a positive beta of 0.321 with a significance level of 0.003 and the |t| of Cost is 3.077 which is greater than 2, this means that the cost share inverse impact with the usage and adoption of credit cards i.e. if the cost of the credit cards lower than their usage and adoption will increase. It implies that Cost and Usage have an indirect relation, therefore we have reject the null hypothesis and accept that, the greater the cost the lower the usage of credit card.

On the other hand Religious belief have a positive beta of 0.104 with the significance level of 0.205, but the |t| test is less than 2 and is 1.276, therefore there is no sufficient evidence to reject the null hypothesis, so we can say that there is no negative relationship between the religious belief and the usage of credit cards.

V. Discussion

This study was conducted for credit card holders in Pakistan to find out their underlying reasons and to understand their perception on the usage and adoption of credit cards. It is learned from the analysis that the factors that affect the consumer in accepting or rejecting the use of credit card may vary from one consumer to another, but it can be seen that awareness, cost, functional dimension, religious belief and sociopsycho are correlated with the usage and adoption of credit cards. But the study shows that awareness and

functional dimension has a very stronger impact in changing the perception and understanding among credit card holders. Cost also has an impact on the usage and adoption of credit card. Whereas the regression analysis proves that the impact of religious belief and socio psycho vary from positive to negative and does not show enough significance.

The data that we have collected and analyzed tell us that it is evident from the results that all the hypotheses that we have proposed are correlated and are true.

 $H_{\rm A}$: Awareness has a positive impact on the usage and adoption of credit cards.

 H_A : If Functional dimension is high it has an impact on the usage of credit cards.

 H_{A} : The greater the cost the lower the usage of credit card

 H_A : Religious belief has a negative relation with adoption of credit cards.

 H_A : Socio – Psycho has a positive relation with usage and adoption of credit cards.

From the results we conclude that all the variables have relation with each other but religious belief and socio – psycho are not highly correlated.

Awareness, functional dimension and cost have the highest impact in changing the perception and understanding of credit cardholders. This means that if the banks offer good facilities and high awareness is done for credit cards than individuals will be more inclined towards the high usage of credit cards. The bankers should lower their interest rates and increase their credit limit, because cost has an inverse effect on the usage and adoption of credit card.

Whereas the Religious belief shows that this variable is important but it does not majorly affect the decision of usage or adoption of credit cards among its user. Basically this variable has the lowest effect on the decision making of an individual.

But the result of socio psycho is negative which implies that this variable has no impact on the adoption and usage of credit cards. This means that no matter what the social class consumers belong to, they will still avail the facilities that a credit card provides.

From this research we have successfully identified 3 factors which have high impact on the usage of credit cards. The first factor is of creating high awareness about various benefits that the banks offer and how a consumer can avail all those benefits from using credit cards. The various promotions such as redeemable points and promotion which we get at various stores by using a particular banks credit card impacts highly on the consumers and attract them towards high use of plastic money. The other factor that affects the usage of credit cards is the functional dimension that is if the banks offer higher conveniences,

high facilities and ease of use and payment to its customers the more it will gain popularity. Customers these days look towards adopting things that make their life easier, so the ATM facilities and reliability offered by the banks will lead to the increase in its market share. The third factor that has a high impact on the holders of credit cards is the cost that the bankers charge; the bankers should adopt better risk management at the time of issuance of credit card which is more preferable than that of higher interest rates to cover the subsequent risk.

From this research we have helped in identifying the factors that the bankers and the marketers need to focus on more these days and this is what the customer is looking for in their product. The banks should focus on high promotion of its product and provide better facilities to attract and retain its customers.

Hence we have successfully achieved all the objectives by this study and we are able to identify the reasons that attract or repel the customers from the usage and adoption of credit cards. This study will help the bankers and marketers of banking products to identify better ways in attracting their customers.

VI. Conclusion

This research indicates the fact that, like many other products, awareness plays a key role in adoption of credit card facility. This shows the fact that consumers are more inclined to adopt a product if they are well aware of the product.

Different packages and discounts expand the volume of credit card usages. Banks should concentrate on providing packages like discounts on purchases, bulk purchases or advertising.

Moreover, usage of credit card is also influenced by different cost factors like interest rate fee and volume of credit available for consumers. The study shows that volume of credit card usage is inversely proportional to the cost factors in credit card.

Religious factor have a low impact on the adoption of credit card facility and socio –psycho has negative impact. This shows that credit card facility is mainly dependent on the utility that it provides to its consumers. This also indicates that banks should enhance the convenience factors in advertising credit card to its consumers.

VII. RECOMMENDATIONS

In Pakistan, banks do not market its commercial banking products very well. Marketing of commercial products by banks is mostly oriented toward niche consumers who are already using some sort of credit cards or who are defunct credit card users. This approach has to be changed. Pakistan is gaining economic stability over the period. Therefore the large

untapped market of credit card can easily be exploited by banks in current economic scenario.

Banks should also advertise different packages on mass media. Banks usually use direct advertisement approach to current or previous customers through telemarketing. The scope of those advertisements should be expanded to public. As in case of HBL; banks could advertise discounts on purchasing petrol or dining through credit card on bill boards and newspaper. This will induce increasing demand, not only in current consumers but in potential consumers as well. Potential consumer would be attracted toward credit card through its enhanced features. Convenience should be given high importance, such as the technological service issues that a consumer faces should be reduced. Shortage of cash or the frequent ATM under progress does affect and this should be taken into consideration.

Highest interest rates in case of not paying credit back in due time, is the sure thing that hold back potential consumer from availing credit card facility. It is needed that credit criteria should be tightened with lowering the credit card interest rate fee. Normal 30 to 40 percent interest rate is highest for mitigating the risk of credit cards default. This would do nothing but hinder potential consumers as well as active consumers to use credit in bulk amount.

In Pakistan, there is a number of misperception regarding financial facility credit card offers to its consumers. This misperception stems out of complexity in issuance of credit card and fear of stealing credit card codes. These misperceptions must be addressed in a proper manner. Issuance process should be interactive with the help of bank agents. Also, the use of credit card codes must be prescribed at the time of issuance of credit card. This will enhance the volume of online transactions through safe credit card usage. It will also help in lowering the turnout ratio in long run.

It is very encouraging that credit card usage is not hampered by socio-psycho and religious beliefs of masses. People in Pakistan take credit card as a financial facility rather than a symbol of status. Banks could directly target consumers on the basis of credit facilities it provide for day to day consumption. This facility means that a consumer would not face shortage of cash in purchasing groceries or day to day necessities and family outing. The overstated credit, due to this, could be adjusted in next month with the clear perception of credit and consumption pattern by individual himself.

A Study Customer Satisfaction of E-Service Quality of Point of Sale (POS)

By Mohammad Shaker Ardakani, Sayyed Hassan Mirhosseini Ardakani & Mohammad Fotouhi Ardakani

Islamic Azad University, Iran

Abstract- This study examines the level of customer satisfaction and service quality of e-reader devices has stores and SPSS22 software was used for data analysis and correlation tests to determine the relationship of variables, the analysis of the test for identification of direct and indirect effects of variables has been used on customer satisfaction. The population of this study, shoppers and stores are Ardakan, Iran and sample its 200 stores and shops *in* the city which has customers randomly selected. The results show that the security apparatus reader has the greatest impact on their satisfaction. In addition the low cost; it is most concerned with customer satisfaction. The remarkable thing is that the devices meet the customer's card is the least that should be examined. Authorities can resolve individual complaints, the better the card reader devices can capture and customer satisfaction.

Keywords: e-electronic, customer satisfaction, e-service quality, point of sales (POS.).

A Study Customer Satisfaction of E-Service Quality of Point of Sale (POS)

Mohammad Shaker Ardakani ^α, Sayyed Hassan Mirhosseini Ardakani ^σ & Mohammad Fotouhi Ardakani ^ρ

Abstract- This study examines the level of customer satisfaction and service quality of e-reader devices has stores and SPSS22 software was used for data analysis and correlation tests to determine the relationship of variables, the analysis of the test for identification of direct and indirect effects of variables has been used on customer satisfaction. The population of this study, shoppers and stores are Ardakan, Iran and sample its 200 stores and shops in the city which has customers randomly selected. The results show that the security apparatus reader has the greatest impact on their satisfaction. In addition the low cost; it is most concerned with customer satisfaction. The remarkable thing is that the devices meet the customer's card is the least that should be examined. Authorities can resolve individual complaints, the better the card reader devices can capture and customer satisfaction.

satisfaction, Keywords: e-electronic. customer e-service quality, point of sales (POS.)

I. Introduction

ervice quality evaluation in companies which offer electronic and online services differs with the quality of traditional services. In offering these kinds of services, factors such as time, access and system performance play a highly important role. Subsequently, rapid quality is one of the key factors in offering these kinds of services. Since each customer has his/her specific viewpoints about and expectations customers' service. mutual needs expectations should be taken into account to detect the key important specifications of service quality evaluation from the customers' point of view. By determining these specifications and their importance to the customer, efforts can be made in the time of the customer's dissatisfaction to resolve the problem and raise service quality. Furthermore, these specifications help the company use its resources in the way which has the most qualitative improvement, finally resulting in keeping the customers and boosting the company's profit.

By improving point of sale (POS) network we will witness, on the one hand, the gradual removal of bill and the negative consequences of its production and distribution on the country's economic system, resulting in national productivity increase through increasing daily

e-mail: M.fotoohi90@yahoo.com

transactions' productivity, and on the other hand by raising public trust and belief in the productivity of POS cards and machines, conditions will be better for the decrease of money supply among people, and many minor adrift and static capitals will return to the country's economic system and in this situation the economical boom of the country will become easier. This amount of progress in electronic banking, on the one hand, and the huge amount of the literature on the current topic in identifying the key aspects of customers' service quality. customers' satisfaction, and customers' loyalty in the banking environment, on the other hand, and also very few research conducted in the banking environment where non-human interactions are the main channel of connection and service evolution, determine the significance of this research. Therefore, attempts have been made in the present research to identify and to study the effective factors in electronic service quality and finally testing their relationship with the costumers' satisfaction of the quality of offered services.

Customer Satisfaction (CS)

Today's, the necessity of continuing activities and maintaining the competitive advantage is attention to customers (Mozaheb, Alamolhodaei and Fotouhi Ardakani, 2015). Customer satisfaction is one of the most important variables for long-term business success. Particularly, a review from these studies, interrelationship among service evaluation, loyalty and other related topics with culture (Vesel and Zabkar, 2010). It is stated by Bitner and Zeithaml (2003) that "satisfaction is estimation of customers of a service or product either those fulfill their hopes and requirements. For instance, CS has been found to reduce the costs for attracting new customers and dealing with poor quality, defects and complaints (Michel, Bowen and Johnston, 2009). Reflecting these benefits, CS has been found to improve the long-term financial performance of firms (Williams and Naumann 2011), have positive impact on loyalty (Chenet, Dagger and O'Sullivan, 2011), be applicable predictor for purchase intention (Kuo, Wu and Deng, 2009), increase firm profitability (Williams and Kaumann, 2011) enhance firm's market value (Kanning and Bergmann, 2009) and relationship with culture (Rajendran and Lokachari, 2010; Chan and Wan, 2008). From the translation of many researchers it was observed that satisfaction is a sense of feeling which comes from a procedure of interpreting and judging what is received as a result of expectation as an inclusion of wishes and requirements coupled with the purchase and purchase choice (Armstrong & Kotler, 1996). It is discussed by Giese and Cote (2000) as an evaluative concept that satisfaction is the Current studies and practices in marketing have rekindled interest in and understanding of the role of CS in several ways, and many academicians have studied the relationship CS and SQ (Ladhari, 2009) in the context of retailing, as a result of the studies CS may be explained within these critical approaches;

First, CS is not only the pre-dominant objective for the marketing function in the retail outlets, it is also the summary measure for evaluating the performance of different constructs of the overall satisfaction, such as, pricing or product assortment (Qin & Prybutok, 2009).

Second, CS is a critical predictor for customer loyalty, profitability of the retailer's marketing activities, purchasing and re-purchasing behavior and the retailer's performance (Kuo, Wu & Deng, 2009).

Third, CS provides a common constructs for comparing the impacts of constructs on marketing performance across diverse industries and geographical locations (Kuo, Wu & Deng, 2009).

III. E- Service Quality

E- Service quality refers to the consumers overall evaluation and judgment of the excellent and quality of electronic service offering in the virtual marketplace (Santos, 2003). A number of scales have been developed to measure the e-SQ in e-commerce environment such as, E-SERVQUAL (Parasuraman, Zeithaml, & Malhotra, 2005).

The most well-known scale is SERVQUAL that is developed by Parasuraman, Zeithaml & Berry (1985), and the scale is based on the estimated disconfirmation method whereby the gaps between a customer's expectation and perception are tested. Although there has been a consensus that SERVQUAL has a validated scale for measuring SQ in various service settings, incongruities have been remained over some aspects of the scale. However, this approach criticized by many researchers Mehta, Lalwani & Han (2000); Dabholkar, Dayle & Joseph (1996); Bouman & Van Der (1992). The rationale of criticism, as emphasised in the studies of Mehta, Lalwani & Han (2000) and Bouman and Van Der (1992), customer's expectation of services can be marked better than performance by customers. For instance, Babakus & Boller (1992) used the SERVQUAL scale for measuring SQ in their study, and they found, as measured in the SERVQUAL scale, score of relies in the perceptions more remarkably than expectations.

Customers' demand do not basic products or affordable prices, however also convenience shopping experience (Martinelli and Balboni, 2012). Earlier studies addressed to measuring SQ in the retailing settings have often started from SERVQUAL (Parasuraman, Zeithaml and Berry, 1985). The scale operationalizes SQ by calculating the difference between customer's expectation and recent performance, evaluating both in relation to the 22 items that are classified under five broad categories. The SERVQUAL scale has been examined and/or adapted in a great number of studies conducted in various service settings such as; health care (Padma, Rajendran and Lokachari, services (Cameran. professional Moizer and Pettinicchio, 2010), information systems (Kettinger, Park and Smith, 2009), tourism industry(Jani and Han, 2011), higher education (Trivellas and Dargenidou, 2009), professional services and fast food (Cronin and Taylor, 1992), banking (Amin and Isa, 2008) and retail settings (departmental and/or discounted stores)(Vesel and Zabkar, 2010; Zhaou, Bai and Hui, 2002; Dabholkar, Dayle and Joseph, 1996). Although, SERVQUAL scale has been utilized by many studies for the retailing, the scale has been criticized by Das, Kumar and Saha (2010); Caro and Garcia, (2007); Babakus and Boller, (1992) due to the lack of integration the industry and they suggested that the model requires modification and customization to specify the features of industry (Ihtiyar et al, 2013).

IV. Hypothesis and Research Framework

In this study, we used to Kim and et al (2008) and SERVQUAL for measurement of E-Service Quality of Point of Sale (POS). In finally, authors used 6 variables for survey of customer satisfaction (see fig 1). This study propose the following hypothesis:

- 1) There is relationship between customer satisfaction and reliability of POS.
- 2) There is relationship between customer satisfaction and responsiveness of POS.
- 3) There is relationship between customer satisfaction and ease of use of POS.
- 4) There is relationship between customer satisfaction and cost of POS.
- 5) There is relationship between customer satisfaction and useful of POS.
- 6) There is relationship between customer satisfaction and security of POS.
- There are different relationship between customer satisfaction and E-service quality.

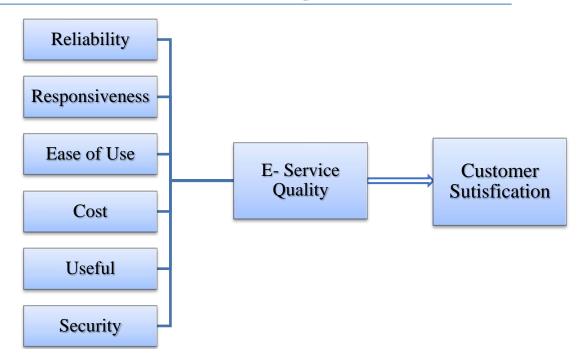

Figure 1: Research Framework

RESEARCH METHODOLOGY

This research, initially used library resources to review the subject literature, then a questionnaire was designed consisting of two parts: demographic (age, education and agenda) and the main body as a measuring tool. The main body of the questionnaire that measures the main variables of the study is a combination of questionnaires about E- service quality factors. which makes 34 questions(including: reliability 7 questions, responsiveness 4 questions, ease of use 5 questions, cost 3 questions, useful 6 questions, security 5 questions and customer satisfaction 4 questions)based on a five-point Likert scale(from 1: very disagree to 5: very agree). The questionnaires were used after localizing and necessary modifications to fit the target population. The subjects of the study are in the stores.

a) Sampling

The population of this study, shoppers and stores are Ardakan city, Iran and sample its stores and shops in the city which has customers randomly selected. In order to determine the reliability of the instrument, a pre-test was conducted with a sample size of 25 customers in this city. The results of the pre-test indicated the reliability of the measurement tool with Cronbach's alpha 82.1%. The total of 200 questionnaires were distributed of which only 180 questionnaires were usable (Rate of Return: 90.0%). Demographic data obtained from the samples are shown in Table 1.

able	1	: Respond	lent Char	acteristics
	ıble	able 1	able 1 : Respond	able 1 : Respondent Char

Ag	е	Agen	da	Education	on
Year	%	Agenda %		Education	%
Under 20	10.0	Male	84.5	Under diploma	6.6
20 - 29	67.7	Female	15.5	Diploma	42.9
30 - 39	15.6			Біріопа	42.9
40 - 50	6.1	N = 1	80	Under graduate	47.2
Upper 50	6.7			M. A and upper	3.3

b) Reliability and Validity Analysis

In this study, standard questionnaires are used to assess the validity of questionnaire we use. And, after its localization, its initial questionnaire was drawn and by the time of codification, the researcher distributed questionnaires among experts, scholars, and also some of customers, then after collecting opinions of the group, corrective enterprises in the initial questionnaires get under way. Then, in the next stage the researcher distributed 30 questionnaires among customers. Finally, considering customers' opinions and experts' and advisors' final considerations, final questionnaire was codified.

In this study, reliability or trust ability of the questionnaire is assessed by measurement method of Cronbach's α by using SPSS software. In order to assess the reliability level, an examination with a sample of 200 customers was taken in Ardakan. Test results indicate that the reliability measurement of Cronbach's α coefficient was 91.4%, which was statistically of a

desired rate. To summarize, the measurement indicators of the questionnaire in this study have good reliability and validity.

Data Analysis VI.

In this study, SPSS software has been used for data analysis. In order to test the relationship between variables, correlation test was used. The results of correlation test is shown in Table (2).

Table 1: Correlation between Variables

Variables	Reliability	Responsi veness	Ease of Use	Cost	Useful	Security	Customer Satisfaction
Reliability	1.000	•					
Responsiveness	.542**	1.000					
Ease of Use	.518**	.566**	1.000				
Cost	.500**	.330**	.433	1.000			
Useful	.482**	.626**	.552**	.516**	1.000		
Security	.577**	.501**	.474**	.464**	.589**	1.000	
Customer Satisfaction	.387**	.387**	.247**	.464**	.589**	.520**	1.000
Mean	3.399	3.546	4.034	4.331	3.896	3.788	4.079
Std. Mean	.566	.723	.660	.725	.706	.787	.703
	**	. Correlation is	significant at the	0.01 level (2-tailed).		

It can be seen, all variables related to E-Service Quality are correlated with Customer Satisfaction. Variable of reliability is the Lowes mean. It showed reliability of POS are low to users and customers. In addition, cost and ease of use variables reveal the highest correlation with customer satisfaction. Also all of the variables Correlation is significant at the 0.01 level with customer satisfaction.

Path analysis, which is a generalized form of multiple regression method in the formulation of causal models, in addition to direct effects, indirect effects of each of independent variables on the dependent variables are identified. The default linear regression used in the path analysis, shows that the Distribution of dependent variables is normal or near normal. . In order to verify the normality of data, Kolmogorov - Smirnov single sample 2 was used. This test compares the observed cumulative distribution function and the normal theoretical cumulative distribution function. Test results of Kolmogorov - Smirnov showed that for most variables trait distribution in the sample with its distribution in society, is not normal and there is a significant difference between observed and expected frequencies. So being aware of the abnormal data distribution, we used their natural logarithm for performing regression. Finally, the preliminaries were provided for path analysis. In conducting the path analysis, customer satisfaction was considered as the final dependent variable, Useful, ease of use,

responsiveness, reliability, security and cost as independent variables. The results of the path analysis process is shown in table (3).

Table 3: Total Procedure of Path Analysis

Stages	Variable Depend	Sig	R	F	Variable In Depend	Sig	Т	Beta	Tolerance

3	Security	0.0	.638	30.0006	Reliability Responsiveness Ease of Use Cost	0.000 .0008 .074 .135	4.0450 2.0685 1.0795 1.0501	.345 .203 .136 .104	.565 .595 .587 .708
4	Ease of Use	0.0 00	.643	41.0312	Reliability Responsiveness Cost	.006 0.000 .003	2.0765 5.0602 3.0005	.208 .386 .201	.590 .701 .745
5	Responsiv eness	0.0 00	.547	37.0730	Reliability Cost	0.000 .281	6.0920 1.0082	.503 .079	.750 .750

The stepwise method was used in this path analysis, accordingly, all factors are put into the regression and then each of the variables that have significant impact are shown. One of the most important assumptions in testing causal relationships, is the lack of co linearity relationship between variables. A high co linearity regression equation signifies a low validity, despite the high coefficient of determination. For the co linearity test, Variance Inflation Factor was used, which is reverse of tolerance statistic. Tolerance is a proportion of variance which is not explained by other independent variables. The lower the tolerance, the higher VIF index, and thereby the rate of co-linearity increases. This leads to the increase of variance of regression coefficients and causes adverse regression model for prediction. In the present study, the maximum VIF in the regression

models used in all procedures of the path analysis is 1.130, which is an acceptable number. Therefore, through the VIF index we can realize the low co linearity between independent variables and also concluded that the validity of the model is relatively high. In order to answer the question which of the variables have a stronger impact on customer satisfaction, the impact of direct, indirect and total effects were calculated. The results are shown in Table (4). For answer to this question, which variables have a more impact on customer satisfaction we calculate direct and indirect effect (see fig 2). Finding indicate reliability haven't direct impact on customer satisfaction but reliability have an indirect effect. Also security have a most effect on customer satisfaction. Therefore, responsiveness have low negative impact on the customer satisfaction.

Table 2: The Type and Intensity Impact of Each Variable on Customer Satisfaction

	Effects		
Variables	Direction Effect	Indirection Effect	Total
Useful	.339	0.000	.339
Security	.303	.073	.376
Ease of Use	.201	.096	.297
Responsiveness	201	.190	010
Cost	.159	.059	.218
Reliability	0.000	.123	.123

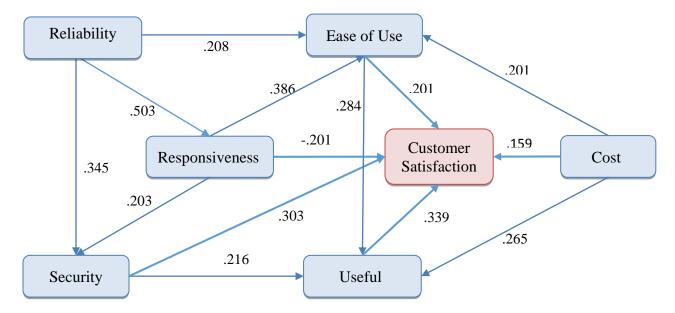

Figure 2: The Relationship Model

It can be seen, all variables related to E-Service Quality are significant correlated with Customer Satisfaction. In result, accepted all hypothesis.

VII. Conclusions and Suggestions

The inferential analysis results of this research show that security and being useful have the highest effect on customers' satisfaction, a result which is in line with that of Ganguli and Roy (2011). Suggesting a positive significant effect of security on customers' satisfaction and loyalty. It is also in line with Macgregor and Vrazalic (2005) that the high cost of Internet access also communicational infrastructures being insufficient are obstacles to accepting to use the POS machines, and responsiveness has the lowest effect on customers' satisfaction. The authorities can resolve the problem in the shortest possible time, if one comes up. As the results of this research show, to increase the tendency to use and subsequently to increase the true use of POS system in the retailers and stores, the users of POS system should have a thorough understanding of the usefulness and advantages of this system, for which the authorities can play a significant role by applying suitable advertising and strategies. Thus, if the banks intend to expand electronic banking and electronic payment in general, they have to provide the hardware. software, cultural, legal, security infrastructures, and relationship management with the customer, in addition to improving the effective relations and interactions among the organization members, customers, networks and organizational groups.

The present research is an initial effort in identifying the effective factors on customer's satisfaction of the points of sale (POS) in the retailers and stores. Attempts have been made to evaluate all the

effective factors on the satisfaction of POS system by using a questionnaire and SPSS software, and to prioritize the importance of each of these factors on customer's satisfaction. Thus, more expanded research is needed to prioritize all the effective factors on POS system acceptance and its application with the aim of increasing customer's satisfaction and the true use of POS. Considering these issues, some suggestions are presented to improve POS quality in shops:

Paying attention to the understanding of POS system's usefulness: considering the fact that the owners of some shops lack high educational levels, the companies which are responsible for installing and operating this system should provide these people with complete and useful information (especially about how to use the POS). As the result of the research indicate, to increase the tendency to use, subsequently improving the true use of POS system in the retails. The users of the POS system should have a complete understanding of the usefulness and advantages of this system.

Paying attention to the understanding of usage ease: Based on the research conducted on the effective factors on the understanding of POS system usage ease, the only effective factor on the understanding of POS system usage ease in the retailers of Ardakan is service quality. By improving service quality, a complete and accurate understanding of POS system usage ease can be presented to the users of this system. To utilize POS system maximally, this factor should be highly invested on.

Improving electronic service quality: In the time of problem occurrence, POS system service supporting company must resolve the problem as quickly as possible, and provide the person with suitable

guidelines to use the system correctly. By offering basic and practical guidelines for using POS, service supporting companies can increase the quality level of POS system services, and as a result, cause the usage level of this system to improve in the shops. Some further action can also be taken, such as: human resource expansion, planning with the aim of constant improvement through identifying and measuring the effective factors on the quality of the provided electronic services, planning and coordination with the aim of making Internet and electronic units complexes responsive.

Improving offered services responsiveness: To the end, advertising about the services being provided improves the provided services responsiveness. Offering fast services, increasing the speed of service offering and also on time and suitable responsiveness to customer by using electronic-mail, holidays publicizing, etc. through SMS to customers are other strategies which will improve the offered services.

Factors Affecting Customer Satisfaction on Berger Paints Bangladesh Limited

By Md. Touhidul Islam

Pabna University of Science & Technology, Bangladesh

Abstract- The main objective of this research paper is to explore and investigate the customer satisfaction level of Berger paints Bangladesh limited. Berger, the market leader in the Bangladesh paint market, is one of the oldest names in the global paint industry. This Research paper will help the company to measure the present level of customer satisfaction and loyalty in Berger paints. This research investigates the factors that affect the level of customer satisfaction among the users, and what are the different influencing them. It has been used simple random sampling under the probability sampling method and used structured questionnaire for collecting information. This research used Microsoft Excel to analyze data. Major findings shows that customer of Berger paints are mostly satisfied about perceived product quality, product reliability, product durability, product availability & size, product innovativeness, product relationship and delivery performance. In case of service quality and customer care service one – third respondents are dissatisfied.

Keywords: perceived value, perceived product quality, customer satisfaction, berger paints bangladesh.

Factors Affecting Customer Satisfaction on Berger Paints Bangladesh Limited

Md. Touhidul Islam

Abstract- The main objective of this research paper is to explore and investigate the customer satisfaction level of Berger paints Bangladesh limited. Berger, the market leader in the Bangladesh paint market, is one of the oldest names in the global paint industry. This Research paper will help the company to measure the present level of customer satisfaction and loyalty in Berger paints. This research investigates the factors that affect the level of customer satisfaction among the users, and what are the different influencing them. It has been used simple random sampling under the probability sampling method and used structured questionnaire for collecting information. This research used Microsoft Excel to analyze data. Major findings shows that customer of Berger paints are mostly satisfied about perceived product quality, product reliability, product durability, product availability & size, product innovativeness, product relationship and delivery performance. In case of service quality and customer care service one -third respondents are dissatisfied. Perceived value of customer is low where most of the customers are dissatisfied about the Berger's product price. Finally some recommendations and suggestions are given on the basis of findings that will be informative & fruitful for Berger paints Bangladesh limited and customers.

Keywords: perceived value, perceived product quality, customer satisfaction, berger paints bangladesh.

I. Introduction

erger Paints is one of the oldest names in the paint industry, yet, it is one of the most technologically advanced companies in the country. It is constantly striving for innovating superior quality products and services. With more than 250 years of rich heritage, Berger manufactures world class paints for all kinds of substrates and also provides unparallel services. Berger's inception was laid out in 1760 by a German national named Louis Berger, who started dye and pigment making business in England. Louis involved his family into the business and eventually changed the status of the company to Louis Berger and Sons Limited. The company grew and expanded rapidly with a strong reputation for excellence in innovation and entrepreneurship. In the initial years, Louis successfully refined the process of manufacturing Prussian blue, a deep blue dye. This dye was widely used for the uniforms of many European armies of that time. Production of dyes and pigments evolved into production of paints and coatings, which till today, remains the core business of Berger. The company

Author: Department of Business Administration, Pabna University of Science and Technology. e-mail: touhidpust@gmail.com

grew rapidly, by establishing branches all over the world and through mergers and acquisitions with other leading paint and coating manufacturing companies. Berger **Paints** started "painting" Bangladesh independence. Over the past few decades, Berger has evolved and transformed itself in becoming the leading paint solution provider in the country with a diversified product range that caters to all your painting needs. With its strong distribution network, Berger has reached almost every corner of Bangladesh. Nationwide Dealer Network, supported by 8 Sales Depots strategically located at Dhaka, Chittagong, Rajshahi, Khulna, Bogra, Sylhet, Comilla, and Mymensingh. Berger's one of the prime objectives is to provide best customer supportconnecting consumers to technology specialized services like free technical advice on surface preparation, color consultancy, special color schemes etc. To bolster customer satisfaction, Berger offers Home Decor Service from where one can get an array of services pertaining to painting. Apart from business, Berger Paints has added another dimension to its social responsibilities by contributing to the well being of the autistic children in Bangladesh from 2009. Berger grew rapidly by establishing branches all over the world and through merging with other leading paint and coating companies. Today, Berger is one of the leading companies in the global paint industry. Berger offers all kinds of painting solutions in decorative, industrial or marine segment for both decorative and protective purpose Berger Paints started its sailing into the sea of Bangladesh from pre-liberation era, to be precise in 1950. The main business flourished in the post liberation phase.

a) Research Problem

Raising competition from Paint and non paint competitors and continuing development of innovative ways to provide financial services are all contributing to a growing interest in evaluating Berger's performance. Various groups of individuals are particularly interested in evaluating Berger's performance. This research is about evaluating the Berger Paints Bangladesh Ltd's customer satisfaction. This is a research project where I shall be trying to evaluate the overall customer satisfaction of Berger Paints Bangladesh Ltd on the basis of some factors that helps to explore customer satisfaction. These factors are product cost, product quality, delivery performance, supplier, time-to-market,

service support, personal interaction, and customer satisfaction. The two main competitors currently facing Berger Paints are Asian Paints and Elite Paints. At the moment, the advantage Berger is experiencing is the generic nature of Color Bank. Through survey, the most common finding was that when people generally visit outlet, most of them prefer Berger Paints for their good product quality and higher brand image in spite of Elite Paints has similar color variety, and its providing numerous shades, because they cannot maintain proper delivery.

b) Significance of the Study

This paper will help to find out the customer satisfaction level and loyalty among the Berger paint users. In this competing market what variety of product Berger paints are providing to their customer is a very important issue. Research has find out how strong relationship Berger maintain with their customer and how they are satisfying their customer by providing value. Therefore the researcher purpose is to find out, is there any significant relationship between Berger paints and customers perception towards using Berger products.

This research is mainly based on the answers of the questionnaire survey.

c) Objectives of the Study

The main objective of this study is to know about the overall the satisfaction level and loyalty affected by selected factors among the Berger paint users of Bangladesh.

- i. To investigate respondent's demographic.
- ii. To investigate the relationship between Perceived value (Product Price) and the customer satisfaction.
- iii. To investigate the relationship between Perceived product quality and the customer satisfaction.
- iv. To investigate the relationship between Product reliability and the customer satisfaction.
- v. To investigate the relationship between Product durability and the customer satisfaction.
- vi. To investigate the relationship between Product availability, size and the customer satisfaction.
- vii. To investigate the relationship between Product quantity and the customer satisfaction.
- viii. To investigate the relationship between Product innovativeness and the customer satisfaction.
- ix. To investigate the relationship between Service quality and the customer satisfaction.
- x. To investigate the relationship between Delivery performance and the customer satisfaction.
- xi. To investigate the relationship between Customer relationship and the customer satisfaction.
- xii. To investigate the relationship between Customer care service and the customer satisfaction.

d) Limitations of the Study

- Due to time constraints it is not possible to cover vast area. So that survey has limited scope for application in wide market.
- Few customers are hesitated, agitated and disturbed to deliver some information's due to the time wasted in the providing the same.
- The study was limited by a number of factors.
- Sample size was very small to present the proposed scenario and people here in our society are not familiar with marketing research.
- There might be some sampling error because of convenience sampling process.
- Cost constraints leads to reduction in number of respondents.

II. Review of Literature

a) Perceived Value (Product cost)

Berger is trying to make it possible to bring the best painting solutions at affordable prices. They have different category of product with different price. Product costing is defined as a process of estimating the cost of a final product at design stage (Sheldon et al, 1991). Ulaga and Eggert (2006) point out that manager identify direct product costs, i.e. the price charged by a supplier, as the key relationship cost-driver. With regard to the effect of price on customer satisfaction in the context of manufacturing firms, Fynes and Voss (2001) found both constructs to be inversely related. On the other hand, we found no studies with a direct influence of price on customer loyalty. Whitney (1987) pointed out the predominant percentage of manufacturing cost of a product is determined at product design stage. Therefore, estimating cost at design stage, i.e. product costing, is one of the vital enablers for accurate pricing in customer negotiation. Moreover, product costing is able to discover the linkages between design specifications and cost factors and then find the method to reduce cost at early stage. Product costing aims at estimating the cost of a product without complete information of process plan or other production data. There are a number of research perspectives in industry and academia. Alexander et al, (2002) narrowed these methods down to three categories: analogous method, statistical method and analytical method. Analogous methods suggest that similar products have similar costs. These methods describe similarity as the level of correspondence of relevant characteristics (Alexander et al, 2002). The degree of similarity in function or geometry is computed as the distance between two similar items. One of the drawbacks of analogous methods is the limitation of the number of characteristics. In addition, the information provided to search for a similar product at early design stage is insufficient and the values of some characteristics may

be missing. Moreover, part of overhead cost (like inventory cost) is not related with the specifications of product. Therefore, analogous methods are only suitable to estimate the costs related with product features.

b) Perceived Product quality

Berger Paints Produces decorative, industrial, marine, coatings along with binders/different polymers (for paints and textile industry). The factories employ modern technologies for the purpose that includes automatic and semi-automatic production and filling lines. Production and quality testing machine from famous makers in Asia, Europe and America ensures precision of operations and enviable quality of the product. Raw materials of consistent quality from renowned brands are being used and the best of the professionals in the industry oversee the production and quality assurance operations. People, mostly engineers and chemists, who are considered as the most valuable resources at Berger. Berger thus ensures manufacture of the best quality products at most competitive cost employing green manufacturing techniques. There are some studies that found a positive effect of product quality on customer satisfaction (Selnes, 1993; Janda et al, 2002; Chumpitaz and Paparoidamis, 2004), whereas the effect on customer loyalty clearly lacks empirical support in the business-to-business context. consumer-based studies the positive link between product quality and loyalty has mostly been confirmed for behavioural loyalty (Devarajet al., 2001; Espejelet al., 2007). The transcendent definition of quality is derived from philosophy and borrows heavily from Plato"s discussion of beauty. From this viewpoint, quality is both absolute and universally recognizable. According to Pirsing (1992, p.73), defining quality as excellence means that it is understood "ahead of dimension as a direct experience independent of and prior to intellectual abstractions. The product based approach has its roots in economics. Differences in the quantity of someone ingredient or attribute possessed by the product are considered to reflect difference in quality (Garvin, 1984). For example, better quality lines have a higher thread count. This view of quality, based on a measurable characteristic of the product rather than on preferences, enables a more objective assessment of quality. The manufacturing based approach has its roots in operations and production management. Here quality is defined as conformance to specious (Crosby, 1979). Quality of conformance relates to the degree to which a product meets certain design standards. This definition has an internal focus, in contrast to the external focus of the user based approach, and quality is considered as outcome of engineering and manufacturing practices. It is the basis for statistical quality control. Deviation from design specifications results in inferior quality, and consequently increased cost due to scrap, rework or

product failure. This definition allows for the precise and objective measurement of quality, although it has limited applicability for service.

c) Delivery performance

Berger always maintains proper delivery performance to meet customer demand. Because the consumers don't care if a supplier or distributor had a problem. "If something goes wrong in the supply chain. it ruins things for the consumer/end user". Their product delivery is always accurate. Berger has a strong distribution channel and logistic support all over the country to maintain proper delivery. Delivery performance, encompasses suppliers" ability to "meet delivery schedules (on-time delivery), adjust to changes in delivery schedules (flexibility) and consistently deliver the right parts (accuracy)" (Ulaga, 2003, p. 684). Compared to product quality, empirical support for delivery performance as an antecedent of satisfaction and loyalty is even more modest. The order-to-delivery (OTD) process is one of the most important processes to manage. It can be defined as consisting of four subprocesses; customer"s ordering, supplier"s delivery, logistics service provider"s (LSP"s) transportation, and customer"s goods receipt sub-process (Mattsson, 2004). The performance of an OTD process concerns traditionally lead time and on-time delivery. In a logistics context, lead time is typically defined as the elapsed time between recognition of the need to order and the receipt of goods (Blackstone and Cox, 2005). On-time delivery is the extent to which the lead time, and as a consequence the delivery date and the delivered quantity corresponds to what has been confirmed (e.g. Forslundand Jonsson, 2007; Kallio et al, 2000). There are, however, other performance dimensions that in order-by-order environments also may be important: lead time variability, lead time adaptability and lead time flexibility. The external view considers that the internal perspective is insufficient to develop all the company"s capabilities since some of them are created and strengthened by inter organizational relationships with other firms in the same network. This analysis perspective suggests that a company"s critical resources can be expanded or constructed beyond the confines of the firm, and be integrated in inter-business routines and processes (Dyer and Singh, 1998), by being jointly directed at greater customer satisfaction (Zhao and Stank, 2003). In this context, outsourcing finds new theoretical support by being developed from a strategic perspective, that is, with the aim of obtaining a sustained competitive advantage. That requires relationships to be maintained within a framework of long-term cooperation, with suppliers considered to be partners (Pfohl and Buse, 2000).

d) Customer Relationship

A consumer products company remains profitable only if it has the right product at the right price in the right place at the right time. However, getting these stars to line up only happens when "the entire supply chain works as one. When BERGER places its logo on a product, the logo represents "a seal of quality." Protecting that quality makes BERGER responsible for its entire supply chain. Ulaga and Eggert (2006) identify supplier know-how and its capacity to improve the time-to-market as two benefit dimensions in of area "customer operations". Supplier performance has been positively linked manufacturing firm performance (Shin et al. 2000). If performance is affected by the quality of the relationship, then in order to sustain performance, the relationship must be sustained. Fundamentally, the ongoing relationship between manufacturer and supplier is not important for its own sake. Rather, a healthy relationship is important because it encourages more information sharing, better communication, and more trust, each of which can improve planning, coordination, problem solving, and adaptation (Fynes et al, 2005), and thus manufacturing firm performance. It is important to understand how manufacturers react to supply failures and recoveries because these reactions may be the antecedents to significant costs. A supply failure may induce the manufacturing firm to invest in improving supplier capability up to required levels because supply failures increase transaction costs (Forker, 1997; Krause, 1999). Lacking trust in supplier reliability the manufacturing firm may expend resources and monies to identify back-up suppliers, or add slack (e.g. inventory, longer lead times) to the system. A critical supply failure, or a series of failures, can lead to potential relationship disintegration (Ellram, 1991; Bowersox and Closs, 1996).

e) Product availability and innovativeness

Maintaining liaison with nationwide dealers and also ensuring that Berger products are available everywhere in the country. Marketing Department communicates internally on how to bring new product and innovative painting solutions to meet the needs of various wants. Linking consumers' needs with the capacity of fulfilling them, the marketing department supervises Home Decor centers throughout the country. So Berger"s products are available in the market. Timeto-market is the strategy of focusing on reducing the time to introduce new products to market. According to Whitney, (1990), the process is self-contained with little if no outside interference. The absence of manufacturing involvement, even in writing the manufacturing process plan, increases the possibilities for redundant activities and reduces the chances for getting the optimal design in shorter time. It has been found that 80-90 per cent of the time-to-market equation is absorbed in the design

phase. Reducing this time is central to getting products earlier to market. Further, 80per cent of a product"s cost is committed during the design phase, whereas design only absorbs 8 per cent of incurred costs. The benefits of bringing products to market quicker than competitions are extra sales revenue and earlier breakeven, extended sales life, premium price giving bonus profits from being first, early introduction means "hooking" customers before competition and thus developing their loyalty, and leading to increased market share.

f) Service Quality and support

Berger has online customer support system to get advice from experts about their product. They have care line to get direct support and any information regrinding their product. Customer service is the ability to provide a service or product in the way that it has been promised. Gronroos (200, p.46) defined service as, "A service is a process consisting of a series of more or less intangible activities that normally, but not necessarily always take place in interactions between the customer and service employees or physical resources or goods and/or systems of the company, which are provided as solutions to customer problems". Customer service is the provision of service to customer before, during and after a purchase. According to Turban et al. (2002), "Customer service is a series of activities designed to enhance the level of customer satisfaction-that is, the feeling that a product or service has met the customer expectation." From the point of view of an overall sales process engineering effort, customer service plays an important role in an organization"s ability to generate income and revenue (Paul H December 1998). From that perspective, customer service should be included as part of an overall approach to systematic improvement. A customer service experience can change the entire perception a customer has of the organization. Customer service is a system of activities of a company or organization that comprises customer support system, complaint processing, speed of complaint processing, ease of reporting complaint and friendliness when reporting complaint (Kim, park and jeong, 2004).

g) Personal Interaction

Berger maintains a very good relationship with their customers and dealers. Marketing department coordinates various events and activities as part of Berger"s Corporate Social Responsibilities. For the last two years, Berger has been contributing to the welfare of autistic and differently challenged children of Bangladesh. In addition to that, the department is also involved in organizing BAEA (Berger Award for Excellence in Architecture), BASAB (Berger Award for the Students of Architecture, BUET), BYPAC (Berger Young Painters" Art Competition), Scholarship Program

for the students of Architecture, Khulna University etc. The personal interaction is acknowledged to represent one of the kev issues in business and industrial marketing, both in terms of practice and theory. Organizational relationships are always a result of the actions of the individuals representing the organizations (Granovetter, 1985) and social relationships form the channel for doing business (Halinen and To" rnroos, 1998). Personal interaction was defined as a key element of interaction between organizations already in the interaction approach (Ha kansson, 1982). Later research has defined basic and complex functions for social relationships, with positive and possibly negative influences on business relationships (Halinen and Salmi, 2001). The variety of the personal interaction in project business relationships has been recognized at the community level in terms of relevant actors in the project marketing milieu, a concept introduced by Cova et al (1996). Accordingly, themilieu refers to the nature of the context in which project business firms operate. Within the milieu, project business firms have to generate or maintain credibility and to be a part of informational and social networks through personal interaction by individuals representing them. Cova and Salle (2000) emphasize community level rituals in the interaction during the sleeping relationship phase.

h) Customer satisfaction

Berger's one of the prime objectives is to provide best customer support-connecting consumers to technology through specialized services like free technical advice on surface preparation, consultancy, special color schemes etc. To bolster customer satisfaction, Berger offers Home Decor Service from where one can get an array of services pertaining to painting. Satisfaction is a "positive affective state resulting from the appraisal of all aspects of a firm"s working relationship with another firm" (Anderson and Narus, 1984, p. 66). Consistent with this view, satisfaction encompasses economic and noneconomic components. Economic satisfaction is defined as a "Positive affective response to the economic rewards that flow from the relationship with its partner, such as sales volume and margins", while non-economic satisfaction is a "positive affective response to the noneconomic, psychosocial aspects of its relationship, in that interactions with the exchange partner are fulfilling, gratifying, and easy" (Geyskens et al, 1999). The relationship between economic and noneconomic components of scales for measuring satisfaction differs considerably among studies (Geyskens et al, 1999). Several researchers point out that customer satisfaction either directly (Yi, 1990; Szymanski and Henard, 2001; Spiteri and Dion, 2004; Woo and Ennew, 2004; Russell-Bennett et al., 2007) or indirectly through commitment (Wetzels et al., 1998; Abdul-Muhmin, 2002, 2005; Hennig-Thurau et al., 2002; Caceres and Paparoidamis, 2007) affects customer loyalty, which is one of the main marketing goals of firms (Berry and Parasuraman, 1991). In addition, the research on satisfaction has mostly been carried out in consumer markets, while not so much is known about satisfaction and its antecedents in business-to-business markets (Patterson et al, 1997; Abdul-Muhmin, 2002, 2005; Spiteri and Dion, 2004; Russell-Bennett et al, 2007). That there is a shortfall of research in this area has also been pointed out by Sheth and Sharma (2006) in their overview of the surpluses and shortages in business-to-business marketing theory and research. The authors identify organizational satisfaction as one of the areas that may generate theory-based empirical research, and point out that the understanding of satisfaction in business-tobusiness marketing is still limited. One way of addressing the link between customer value and satisfaction is therefore to study value as a formative construct. On the other hand, however, Devaraj et al. (2001) and Spiteri and Dion (2004) raised the question of whether we really need customer value as a construct. In their discussion they rely on lacobucci et al. (1994), who were the first to observe that all that satisfaction research needs is the inclusion of price (besides the relationship benefits) as another determinant of satisfaction.

III. Research Methodology

a) Research design

The projected framework (Figure 1.0) represented the outline and arrangement relationships among the set of considered variables. In this study, the researchers are going to investigate what are the main reason (Product cost, Product quality, Delivery performance, Supplier, Time to market, Service support, and Personal interaction) that effect in consumer mind (Customer satisfaction) to use Berger paints.

Research Design of this Study

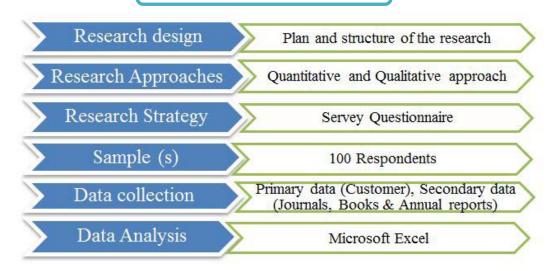

Figure 1.0: Research design of the study

b) Research Framework

This paper attempted to bring the level of satisfaction and loyalty among the Berger paint users. Researchers have tried to put the relevant factors which influence the customers. This research was built upon

using the following framework. The framework consists of six (7) independent variables and one (01) dependent variable surrounding the consumer perception regarding Berger Paints. The framework for the projected study is presented below:

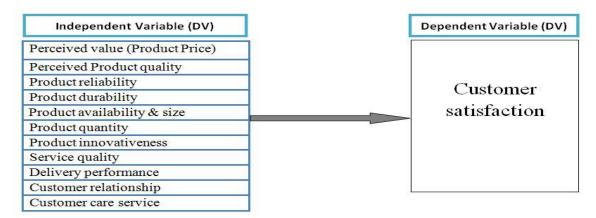

Figure 2.0: Framework of Research Variable and their Relationships

c) Sampling

i. Sample unit

To done this research accurately researcher targeted the population who has currently using Berger paints. Sampling technique will be simple random sampling under the probability sampling method. Sample Size

The sample size was N=100. The study will be conducted in Khulna city, Bangladesh.

d) Tools and Techniques

Questionnaires will permit us to gather information that cannot be found elsewhere from any

secondary information such as books, newspapers, and internet resources. So the questionnaire survey is the most successful method for this study to collect the data. Researcher used a structured questionnaire. In a structured questionnaire, quantitative data is required. Because of this reason, the researcher will use questionnaire. According to interval scale the response choices will be arranged. There are five (5) response choices. Five-point of liker type scales were used in all measures. These are:

1	2	3	4	5
Strongly	Disagree	Neither Agree	Agree	Strongly
Disagree		nor Disagree		Agree

Figure 3.0: Five-point of liker type scales

e) Data Collection, types of data and sources

Primary data has been collected through questionnaire and observation and Secondary Data are collected through journals, web sites, research papers

etc. In this study mostly primary data will be used to draw a recommendation. Twenty (17) questionnaires are to be filled out by respondents from the devised sample.

IV. Data Analysis

a) Respondent's demographic

Table 1.0: Respondent's demographic

Demograph	ic Variables	Frequency	Percentage (%)
	Male	80	80
Gender	Female	20	20
	Below 30	28	28
Age	30-40	50	50
	Above 40	22	22
	Service holder	38	38
Occupation	Business man	34	34
Occupation	Housewife	08	08
	Teacher	06	06
	Others	14	14
Marital Status	Unmarried	18	18
	Married	82	82

ample sizeS= 100

Here, Sample consists of 80 male and 20 female Berger Paint users. Here mentioned that 80% people are male and 20% people are female& out of 100 sampling units. The majority of the respondents are between 30-40 years of age that is 50%. 28% respondents are below 30 years of age, 22% are Above 45 years of age. So the young generations are the

maximum respondents. The mode for the responses is the majority of the respondents are Service holders. There I see that 38% are Service holders, 34% are businessman, and 8% are House wife, 6% are Teachers and the remaining 14% to others. There we see that 82% are married and 18% are unmarried respondents.

b) Data Analysis based on Survey questions

Table 2.0: The dealers deal with higher price. (Perceived value)

Key	Male	Female	Total	Percent (%)
Strongly disagree	08	02	10	10%
Disagree	22	04	26	26%
Neutral	00	00	00	00%
Agree	10	04	14	14%
Strongly agree	40	10	50	50%
Total	80	20	100	100%

The findings here indicate that, a large number of people think that, costs of Berger's product is higher than before. And some people think that price of the

Berger's products is comparatively lower than others. We can graphically present it.

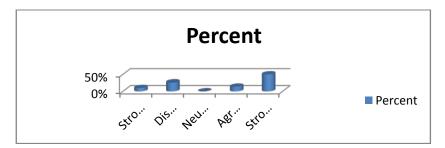

Figure 4.0: Product price (Perceived value)

50% people strongly agree that, the dealers of Berger charges higher price. And 26% people think that the dealer charges reasonable price and only 10% respondent said that the price of Berger's product is lower than others. So we can suggest that the

organization should think about the price of product that directly affects the customer satisfaction level. Berger has to try to make it possible to bring the best painting solutions at affordable prices.

Table 3.0: Berger provides us with better product quality. (Perceived product quality)

Key	Male	Female	Total	Percent (%)
Strongly disagree	0	00	00	00%
Disagree	0	00	00	00%
Neutral	0	00	00	00%
Agree	42	14	56	56%
Strongly agree	38	06	44	44%
Total	80	20	100	100%

It represents that most of the respondents (56%) agree that Berger provides better quality product.

so, Berger has to develop its technology to provide further quality product to maintain customer satisfaction.

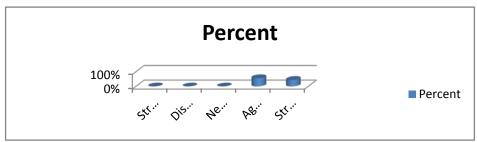

Figure 5.0: Graphically presentation of Perceived product quality

Here we can see 44% customers strongly and 56% normally believe that the quality of Berger product is better.

Table 4.0: Berger meets our quality standards (Perceived product quality)

Key	Male	Female	Total	Percent (%)
Strongly disagree	00	00	00	00%
Disagree	00	00	00	00%
Neutral	00	00	00	00%
Agree	66	16	82	82%
Strongly agree	14	04	18	18%
Total	80	20	100	100%

Here also we see that most of the customers are agreed with the product quality standard of Berger because Berger maintains its product quality standard over the period.

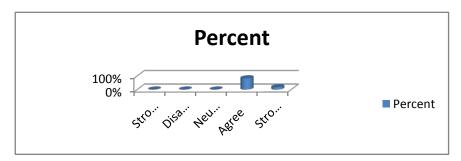

Figure 6.0: Graphically presentation of Perceived product quality

This figure asserts that, customers think that, Berger meets the customer's quality standards.

Table 5.0: Berger provides more consistent product quality over time (Perceived product quality).

Key	Male	Female	Total	Percent (%)
Strongly disagree	00	00	00	00%
Disagree	14	04	18	18%
Neutral	00	00	00	00%
Agree	56	16	72	72%
Strongly agree	10	00	10	10%
Total	80	20	100	100%

The research findings show that, more than 80% people (agree+ strongly agree) believe that Berger

provides more consistent product quality over time. And 18% customers are disagreeing with this statement.

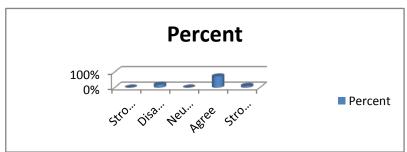

Figure 7.0: Graphically presentation of Perceived product quality

Table 6.0 : Berger products are more reliable (Product reliability)

Key	Male	Female	Total	Percent (%)
Strongly disagree	00	00	00	00%
Disagree	02	00	02	02%
Neutral	02	00	02	02%
Agree	50	14	64	64%
Strongly agree	26	6	32	32%
Total	80	20	100	100%

From the table we can see that 96% customers Berger's products are more reliable and 2% customers are disagree with the reliability and 2% are neutral. Therefore, organization has to work on this sector.

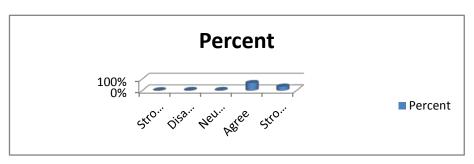

Figure 8.0: Graphically presentation of Product reliability.

Table 7.0: Berger paints are more durable than those of other paints of Bangladesh (Product durability)

The durability of Berger Color Bank compared to Asian, Romana, Elite Paints & others is more.

Key	Male	Female	Total	Percent (%)
Strongly disagree	00	00	00	00%
Disagree	06	04	10	10%
Neutral	08	00	08	08%
Agree	14	02	16	16%
Strongly agree	52	14	66	66%
Total	80	20	100	100%

Out of the total respondents 52% said that, the durability of Berger color bank is more compared to

others. And only 10 percent respondents are disagree with this statement.8% is neutral.

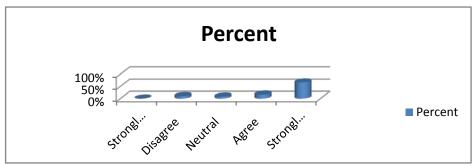

Figure 9.0: Graphically presentation of Product durability

The durability of Berger Color Bank compared to Asian, Romana, Elite Paints & others is more.

Table 8.0: Berger color bank can provide available color (Product availability & Size)

Key	Male	Female	Total	Percent (%)
Strongly disagree	00	00	00	00%
Disagree	00	00	00	00%
Neutral	02	00	02	02%
Agree	24	04	28	28%
Strongly agree	54	16	70	70%
Total	80	20	100	100%

Most of the customers 98% (28%+70%) consider that Berger color bank provides available color. 2% customers are neutral about the availability of color Berger paints.

We can present the customer satisfaction about product availability through a bar diagram.

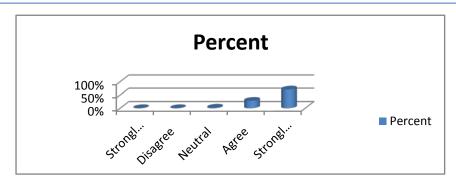

Figure 10.0: Graphically presentation of Product availability & Size

Figure presents that 70% customers are strongly agree and 28% customers are normally agree about availability of color of Berger products.

Table 9.0 : Berger's products are available in its size (Product availability & Size).

Key	Male	Female	Total	Percent (%)
Strongly disagree	00	00	00	00%
Disagree	02	00	02	02%
Neutral	00	00	00	00%
Agree	24	06	30	30%
Strongly agree	54	14	68	68%
Total	80	20	100	100%

Availability of product size is also a most important phenomenon in case of customer satisfaction. From the survey we can see that all of the respondents (98%) without 2% are agree with the available product size of Berger.

We can present the customer satisfaction about availability of product size through a bar diagram.

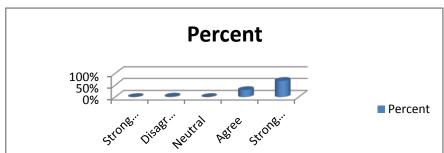

Figure 11.0: Graphically presentation of availability of Product Size

Table 10.0 : Berger's products are available in its size (Product quantity)

Quantity of Color Bank products (per liter) are satisfactory than the competitor product.

Key	Male	Female	Total	Percent (%)
Strongly disagree	00	00	00	00%
Disagree	14	06	20	20%
Neutral	36	04	40	40%
Agree	24	08	32	32%
Strongly agree	06	02	08	08%
Total	80	20	100	100%

Half of the respondents are neutral about quantity of color bank products per liter and 20% respondents are disagree about this statement.40%

people think that quantity of color bank products (per liter) are satisfactory than the competitor product.

We can present this analysis by the following figure -

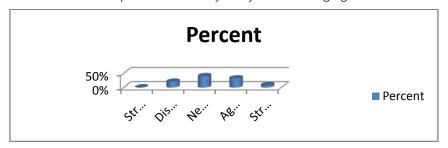

Figure 12.0: Graphically presentation of Product quantity

Table 11.0: Berger knows better how to improve existing products. (Product innovativeness)

Key	Male	Female	Total	Percent (%)
Strongly disagree	02	00	02	02%
Disagree	12	04	16	16%
Neutral	08	00	08	08%
Agree	48	14	62	62%
Strongly agree	10	02	12	12%
Total	80	20	100	100%

Above table represents that some customers (18%) think that Berger does not improve its existing product but most of the customers (74%) are agreed with this statement. So, Berger has to try to improve its existing product to satisfy all types of customers. We can present this analysis by the following figure -

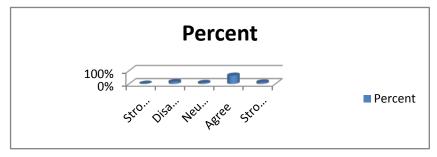

Figure 13.0: Graphically presentation of Product innovativeness

Table 12.0: Berger provide us new, improved and innovative product (Product innovativeness)

Key	Male	Female	Total	Percent (%)	
Strongly disagree	00	00	00	00%	
Disagree	12	04	16	16%	
Neutral	04	00	04	04%	
Agree	60	14	74	74%	
Strongly agree	04	02	06	06%	
Total	80	20	100	100%	

From the data analysis it is clear that 80% (74%+06) people think that Berger provide more up to date product with the changing needs of customers. 16% people think Berger does not provided and new product over the time.

We can graphically present the data which are analysed-

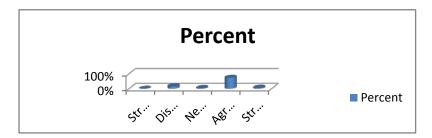

Figure 14.0: Graphically presentation of Product innovativeness

The findings in the chart show that, more than 70% people (agree + strongly agree) believe that Berger performs better at presenting new products. On

the other hand, around 16% respondents did not agree with the statement and 4% people did comment neither agree nor disagree.

Table 13.0: Berger's home decor service is more attractive than those of others (Service quality)

Key	Male Female		Total	Percent (%)
Strongly disagree	00	00	00	00%
Disagree	20	04	24	24%
Neutral	02	02	04	04%
Agree	20	04	24	24%
Strongly agree	38	10	48	48%
Total	80	20	100	100%

Berger provides interior and exterior home decor service which most important factor of customer satisfaction. Research shows that 72% respondents are satisfied with the home décor service of Berger. Opinion

of some people (24%) is that home décor service OI Berger is not more attractive than others.

We can graphically present the data which are analysed-

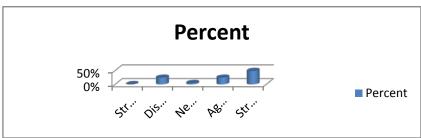

Figure 15.0: Graphically presentation of Service quality

Table 14.0: Berger performs better in meeting delivery. (Delivery performance)

Key	Male Female		Total	Percent (%)
Strongly disagree	00	00	00	00%
Disagree	08	02	10	10%
Neutral	04	00	04	04%
Agree	52	12	64	64%
Strongly agree	16	06	22	22%
Total	80	20	100	100%

Better delivery capabilities may satisfy customers demand. However, the findings above showed that, most of customers 86% (64+22) are satisfied with the delivery process of Berger paint. But some are disagree with the better delivery process. These customers think that Berger should improve its delivery process.

We can graphically present the data about delivery performance of Barger Paints-

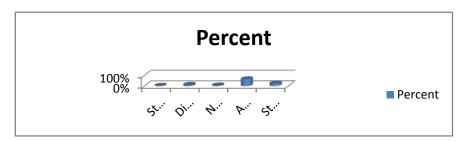

Figure 16.0: Graphically presentation of Delivery performance

Table 15.0: Berger maintains better relationship with us (Customers). (Customer Relationship)

Key	Male Female		Total	Percent (%)	
Strongly disagree	00	00	00	00%	
Disagree	00	00	00	00%	
Neutral	06	00	06	06%	
Agree	60	14	74	74%	
Strongly agree	14	06	20	20%	
Total	80	20	100	100%	

Berger tries to maintain better relationship with its customer because customer is the king of the market. From the survey we can state that Berger maintains better relationship with its customer because 94% respondents are agree with this statement.

We can graphically present the data about Customer relationship of Barger Paints-

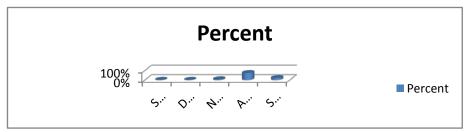

Figure 17.0: Graphically presentation of Customer relationship

Table 16.0: Berger provides better customer care service. (Customer care service)

Key	Male	Female	Total	Percent (%)
Strongly disagree	04	00	04	04%
Disagree	16	04	20	20%
Neutral	10	04	14	14%
Agree	48	12	60	60%
Strongly agree	02	00	02	02%
Total	80	20	100	100%

Berger has online customer support system to get advice from experts about their product. They have care line to get direct support and any information regrinding their product.62% customers think that customer service is available when information is needed but 24% customers are disagree with this statement and 14% are neutral. Hence, Berger has to increase the capacity to ensure available information in accordance with the customer demand.

We can graphically present the data about Customer care service of Barger Paints-

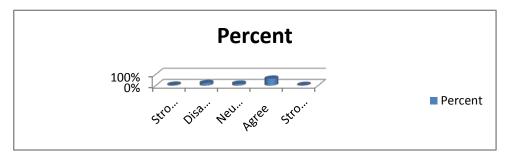

Figure 18.0: Graphically presentation of Customer care service

V. FINDINGS

There are some findings related to the research. These are given below –

- Customer perceived value is low. Most of the customers think that price of the Berger product is high.
- Perceived product quality of Berger paint is high.
 Most of the customers are satisfied about the Barger product quality.
- Product reliability is high. Most of the respondents are satisfied about product reliability of Berger paints.
- Most of the respondents are satisfied about product durability of Berger paints. Only 10% respondents are dissatisfied about product durability.
- Almost all of the respondents are satisfied about product availability & size of Barger paints.
- Most of the respondents are dissatisfied about the product quantity of Berger paints.
- Most of the respondents are satisfied and 18% respondents are dissatisfied about the product innovativeness of Berger paints.
- 72% respondents of are satisfied and 24% respondents of are dissatisfied about the service quality of Berger paints.
- Most of the respondents are satisfied about the delivery performance of Berger paints.
- Almost all of the respondents are satisfied about customer relationship of Berger paints.
- All customers are not satisfied about customer care service. 24% respondents are dissatisfied.

VI. Recommendations

Berger paints is a company, which has so far shown good performance and holds the strongest position in the Painting market. It has a management wise enough to think of and implement an array of financial services through diversification program. It has good quality mid and bottom level management which gives more time for top management to think and plan for new things. It is possible to create better future in the

paint if Berger paints take action for producing more qualitative product which is better than other multinational company. Now a day's most of the business sector is becoming service oriented. Berger Paint has a well established product in the market and is enjoying a high market share. In such a scenario, Berger can now fully concentrate on providing a better service to customer to improve satisfaction level, create new customers, and retain existing customers. From the analysis, it is clear that the main reason of Berger paint usage is their service support and personal interaction. Dealers are a major party to influence customers to purchase Berger products. If they are satisfied, then customers will be satisfied.

On the basis of my survey I recommend about Berger Paints BD Ltd. These are given below-

- ✓ Berger should introduce product with affordable price
- ✓ Berger Paints have to take strong strategy against it key competitor.
- The competitors are providing false information about Berger Paints. So Berger Paints should protect it. Otherwise Berger Paints may lose its Brand image, Quality etc.
- ✓ Berger Paints can reconsider its discount policy and provide more discount to customers.
- ✓ Berger Paints have to make some valuable paint contractors who have the goodwill.
- ✓ The company may always maintain its marketing and promotional strategy.
- ✓ Always be aware about the marketing strategy of competitors.
- ✓ Always try to maintain personal and corporate relationship with them.
- ✓ Always keep on touch with their promotional activity.
- ✓ Be aware about competitor's policy.
- ✓ Searching out their marketing strategies always.

VII. CONCLUSION

Paint Industry of Bangladesh is now more competitive than before. According to the data analysis in Microsoft Excel Product quality, Delivery performance,

Supplier, Time to market, Service support, and Personal interaction are positively related with Customer satisfaction. And Product cost is negatively related with customer satisfaction. Because 64% of the customers said that price of the Berger product is very high price. From the study it is being also observed that Product cost, Product quality, Delivery performance, Service support, and Personal interaction have relationship with Customer satisfaction. By those results we can say that this thing is the main reason that people are using Berger paints.

So I think the buyers will buy these products because of the company's brand portfolio.

Customer Perception towards Brand: A Study on 'Patanjali'

By Miss Rupali Khanna

Chandigarh University, India

Introduction- The ever changing marketing scenario and heightened competition over the globe has amplified the role of brand at unparalleled level. Every person is a consumer of different brands at the same time. The choice and usage of a particular brand by the consumer over the time is affected by the quality benefits offered by the brand especially when it comes to brand of eatables and cosmetics. Consumer satisfaction is derived when he compares the actual performance of the product with the performance he expected out of the usage. Philip Kotler (2008) observed that satisfaction is a person's feelings of pressure or disappointment resulting from product's perceived performance (outcome) in relation to his or her expectations. If the perceived benefits turned out to be almost same as expected, customer is highly satisfied and that is how the company achieves loyalty of the customer towards the products.

Customer Perception towards Brand: A Study on 'Patanjali'

Miss Rupali Khanna

I. Introduction

he ever changing marketing scenario and heightened competition over the globe has amplified the role of brand at unparalleled level. Every person is a consumer of different brands at the same time. The choice and usage of a particular brand by the consumer over the time is affected by the quality benefits offered by the brand especially when it comes to brand of eatables and cosmetics. Consumer satisfaction is derived when he compares the actual performance of the product with the performance he expected out of the usage. Philip Kotler (2008) observed that satisfaction is a person's feelings of pressure or disappointment resulting from product's perceived performance (outcome) in relation to his or her expectations. If the perceived benefits turned out to be almost same as expected, customer is highly satisfied and that is how the company achieves loyalty of the customer towards the products.

In Indian scenario, perceptions about a particular brand are important because Indian customers rely on the perception of their near and dear ones before actually buying or using the product. The perceptions of the people around us affect our decision to buy or not to buy the product. Perceptions are highly subjective and thus easily distorted. The qualm of buying and not buying continues into the mind or the black box of the prospective consumer unless his decision is not supported by many. Thus in order to survive in the marketing environment of a country like India, brands need to be positioned in the minds of people. India is already an attractive destination for brands to set in due to favorable marketing conditions. India has known to be a hub of Herbal brands as well since the herbal products are deeply associated with the spirituality sentiments of the people. A WHO (World Health Organization) study estimates that about 80 percent of world population depends on natural products for their health care instead of modern medicines primarily because of side effects and high cost of modern medicine (Sharma, Shanker, Tyagi, Singh, & Rao, 2008) The worldwide herbal products are around \$6.2 billion and estimated to reach \$5 trillion by the year 2050 (WHO & Kumar & Janagam, 2011) This paper carries out a study on what factors

Author: Faculty & Research scholar (part-time) Chandigarh University, Gharuan, Punjab. e-mail: rupalikhanna96@gmail.com

affect buying decision of the buyers for brand PATANJALI.

"Patanjali "- a brand set up by PATANJALI AYURVEDA LTD is backed by robust preaching and promotion of World renowned Guru Swami Ramdevji and an international authority on Ayurveda and Traditional Herbs. The company is set up with an objective to provide superior quality of products at fair price and to get their customers rid off the chronic diseases by providing products which are organic and natural. This concept of Herbal and Pure has gained momentum in India and across the world since people now a days are more centered towards keeping themselves near to Nature due to their commercialized routines. PATANJALI AYURVEDA LTD has more than 100 different products in the catalogue for Skin, Hair, Heart, Eyes and Kidney diseases. Patanjali's recent tie up with Future Group to enter into FMCG segment through Big Bazaar Retail stores is another big advantage towards the availability of Patanjali Products near to their consumers. The Patanjali Products have rightly been placed at advantage by the very concept of "Marketing through Spirituality"

I. Objectives of the Study

The study in hand is conducted keeping in view the following objectives:

- To study the brand perception of 'PATANJALI' in minds of Consumers
- To know the attributes that a customer keeps in mind while buying 'PATANJALI' Products
- To study the satisfaction level of consumers after using 'PATANJALI' Products

III. Research Methodology

This paper is based on primary data collected through questionnaires from 100 users of Patanjali Products within Punjab. The questionnaire design is built up to know the type of products people use, the reason for their buying such product and their post buying satisfaction level from that product. Secondary sources have been used to collect information about 'Patanjali' brands. Journals, articles, research reports and government documents were reviewed to get the insight of the previous interventions that the stakeholders and policy makers have already in place. Also websites of natural products manufacturing company and online

document were investigated to conduct this research. To analyze the questionnaire results tools of descriptive statistics, correlation, regression and non-parametric (chi-square) test have been used.

FINDINGS AND OBSERVATION IV.

The data collected through 100 questionnaires is analyzed through frequency distribution, correlation and regression tools. The below table shows the frequency distribution of the data.

Measure	item	frequency
Age	0-20	23
	20-40	64
	40 and above	13
Gender	Male	30
	Female	70
Occupation	service	35
	Business	11
	Students	53
	House wife	1
Income (in lakhs p.a)	0-1	57
	1-2	15
	2-3	12
	3 & above	16

That above table summarizes the characteristics of users of Patanjali products. Out of 100 users, dominant portion i.e. nearly 2/3rd of the users age between 20-40 years. Looking at the gender distribution, 70% of the users taken under study are females who can perceive to be more interested in buying herbal cosmetics. In Occupation frequency, nearly half of the users are students who are pursuing studies followed by 35% of service class users. The purchasers of Patanjali products are significantly from low income group having and income below 1 lakh. This is because the significant portions of users are students who have little or no Income.

Correlation Analysis

The values of correlation among the factors which affect buying decision of the users is given below:

The correlation values among the factors affecting buying decisions are mostly positively correlated. Income of the users has negative correlation with reasonable price but not so significant. This is because most of the users under study fall under low or no income group so they are dependent upon others for buying the Patanjali products; price is not of so significance to them. Income is strongly and positively correlated to good quality since people are ready to pay to spend significant portion of their income on good quality. Income has negative correlation with 'experience of others' factor. Since people do not consider their income level if they get a positive opinion from people in order to get their problem healed. Reasonable price is strongly correlated with good quality as quality demands cost. On the other hand, good quality has negative correlation with Advertising of Patanjali Products since quality can only be assured after using the product not only through advertising. Health benefit is highly correlated to Good quality but negatively correlated to income as users do not look into the pocket friendliness in hope of extracting the cure to the problem they are looking for. Brand Image is positively correlated to availability (.466) as products with good brand image are easily taken away by distributors. The 'natural and pure' factor shows positive correlation (.289) with 'Swadeshi' which shows the spiritual sentiments of Indian people attached to the Indian Brand 'Patanjali'. Influencing factor for 'Swadeshi' is endorsement of brand by Baba Ramdevji. The followers of Baba Ramdevji seem to believe in Swadeshi factor and thus show positive correlation (0.393). Also, the informative nature of products is positively correlated to name of Baba Ramdevji (0.429) which means the expected health benefits to be derived from the product is well endorsed by Baba Ramdevji which induce the followers to buy the product.

*. Correlation	is significa	nt at the	0.05 leve	el (2-tailed)										

a) Regression Analysis

For the purpose of regression, satisfaction level of the user is taken as dependent variable and attributes of products are independent variables. We assume H₀ The customers are dissatisfied by using Patanjali Products and hence, they willnot buy product again.

So we regress the satisfaction of customer on the factors which together make up his buying decision. We also regress 'buying again' factor to other attributes of product to further study the satisfaction of the user, because if a customer is satisfied, the user will purchase the product again. The regression table is as follows:

^{**.} Correlation is significant at the 0.01 level (2-tailed).

Model Summary

			Adjusted R	
Model	R	R Square	Square	Std. Error of the Estimate
1	.538ª	.289	.152	.868

ANOVA^a

Model		Sum of Squares	df	Mean Square	F	Sig.
1	Regression	25.478	16	1.592	2.113	.015 ^b
	Residual	62.562	83	.754		
	Total	88.040	99			

a. Dependent Variable: Satisfied

b. Predictors: (Constant), Advertising, GoodQuality, Age, Availability, Experience, N & Description (Constant), Advertising, GoodQuality, Age, Availability, Experience, N & Description (Constant), Advertising, GoodQuality, Age, Availability, Experience, N & Description (Constant), Advertising, GoodQuality, Age, Availability, Experience, N & Description (Constant), Advertising, GoodQuality, Age, Availability, Experience, N & Description (Constant), Advertising, GoodQuality, Age, Availability, Experience, N & Description (Constant), Advertising, GoodQuality, Age, Availability, Experience, N & Description (Constant), Advertising, GoodQuality, Age, Availability, Experience, N & Description (Constant), Advertising, GoodQuality, Age, Availability, Experience, N & Description (Constant), Advertising, GoodQuality, Advertising, GoodQuality, Advertising, GoodQuality, Advertising, GoodQuality, Advertising, GoodQuality, Advertising, GoodQuality, GoodQuality, Advertising, GoodQuality, GoodQu and pure), Health Benefits, B.Ramdev(endorsement), Gender, Swadeshi, Reasonable Price, BrandImage, Occupation, Informative, income, Ad-ons

The above table shows that about 29% variability in satisfaction level of customer is explained by the dependent variables. The significance level is .015 which is less than 0.05, so we reject the null hypothesis and conclude that users are atisfied using the Patanjali products.

Model Summary

Model			Adjusted R Square	Std. Error of the Estimate		
1	.602ª	.363	.239	.929		

ANOVA^a

Model		Sum of Squares	df	Mean Square	F	Sig.

	Residual	70.707	82	.862			
	Total	110.990	98				

Here, the value of p is far less than 0.05 too depicting that people, being satisfied, would like to buy Patanjali Product again after using once.

Chi square interpretation (test of association)

 H_0 : The product attributes affect post buying satisfaction level of the buyer

 H_1 : The product attributes do not affect post buying satisfaction level of the buyer

	Test Statistics

The above table shows that value of p<0.001 in all cases except in case of advertising depicting the rejection of Null hypothesis in all other cases accept advertising. That means advertising of 'Patanjali' is effective to post buying satisfaction level of people because of claims made by the advertisers in their ads from experience of others.

V. Conclusion

The Findings in the paper show that there are many significant factors that together make up the buying decision of the product. Customers' perception towards a brand is built largely on the satisfactory value the user receives after paying for the product and the benefits the user looks for. In the above study, a large portion of the user is satisfied from Patanjali products. It may be because of reasonable price of the product. It may be due to ability of the product to cure the problem. The satisfaction brings in the retention of customer. Patanjali is enjoying the advantageous position in market through spirituality element involved in its products. However, it should not ignore the competitors like Naturals, pure roots, Vindhya herbals. Patanjali in order to retain more customers and satisfy them, must fulfill the claims made by the company before any other brand may mushroom up and take away the benefits of marketing through spirituality.

VI. LIMITATION OF THE STUDY

The results of the study may not be generalized because researcher followed convenient sampling method. Moreover, the study includes students with zero income which may not give conclusive results as income affects the buying capacity too. Also, Researcher could not gather much data from age group of 55 and above. The bias cannot be excluded since the researcher only reached out to accessible area to distribute and gather information. Time and resource constraint are other limitations too.

VII. ACKNOWLEDGEMENTS

The researcher undertakes to Thank Mr. Sanjeet Singh (Asstt. Director of Research at Chandigarh University) for giving opportunity to conduct research and offer unparalleled support, Dr. Bhupinder Chahal (Associate prof. at Chandigarh University) for incepting the very idea of topic and all the respondents who provided valuable time to give required responses. The researcher is indebted to her parents for unconditional guidance and moral support required for completion of the project.

FELLOW OF ASSOCIATION OF RESEARCH SOCIETY IN BUSINESS (FARSB)

Global Journals Incorporate (USA) is accredited by Open Association of Research Society (OARS), U.S.A and in turn, awards "FARSB" title to individuals. The 'FARSB' title is accorded to a selected professional after the approval of the Editor-in-Chief/Editorial Board Members/Dean.

The "FARSB" is a dignified title which is accorded to a person's name viz. Dr. John E. Hall, Ph.D., FARSB or William Walldroff, M.S., FARSB.

FARSB accrediting is an honor. It authenticates your research activities. After recognition as FARSB, you can add 'FARSB' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and repute to your name. You may use it on your professional Counseling Materials such as CV, Resume, and Visiting Card etc.

The following benefits can be availed by you only for next three years from the date of certification:

FARSB designated members are entitled to avail a 40% discount while publishing their research papers (of a single author) with Global Journals Incorporation (USA), if the same is accepted by Editorial Board/Peer Reviewers. If you are a main author or coauthor in case of multiple authors, you will be entitled to avail discount of 10%.

Once FARSB title is accorded, the Fellow is authorized to organize a symposium/seminar/conference on behalf of Global Journal Incorporation (USA). The Fellow can also participate in conference/seminar/symposium organized by another institution as representative of Global Journal. In both the cases, it is mandatory for him to discuss with us and obtain our consent.

You may join as member of the Editorial Board of Global Journals Incorporation (USA) after successful completion of three years as Fellow and as Peer Reviewer. In addition, it is also desirable that you should organize seminar/symposium/conference at least once.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

Journals Research

The FARSB can go through standards of OARS. You can also play vital role if you have any suggestions so that proper amendment can take place to improve the same for the benefit of entire research community.

As FARSB, you will be given a renowned, secure and free professional email address with 100 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders, Auto-Responders, Email Delivery Route tracing, etc.

The FARSB will be eligible for a free application of standardization of their researches. Standardization of research will be subject to acceptability within stipulated norms as the next step after publishing in a journal. We shall depute a team of specialized research professionals who will render their services for elevating your researches to next higher level, which is worldwide open standardization.

The FARSB member can apply for grading and certification of standards of their educational and Institutional Degrees to Open Association of Research, Society U.S.A. Once you are designated as FARSB, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria. After certification of all your credentials by OARS, they will be published on your Fellow Profile link on website https://associationofresearch.org which will be helpful to upgrade the dignity.

request.

The FARSB members can avail the benefits of free research podcasting in Global Research Radio with their research documents. After publishing the work, (including published elsewhere worldwide with proper authorization) you can upload your research paper with your recorded voice or you can utilize chargeable services of our professional RJs to record your paper in their voice on

The FARSB member also entitled to get the benefits of free research podcasting of their research documents through video clips. We can also streamline your conference videos and display your slides/ online slides and online research video clips at reasonable charges, on request.

The FARSB is eligible to earn from sales proceeds of his/her researches/reference/review Books or literature, while publishing with Global Journals. The FARSB can decide whether he/she would like to publish his/her research in a closed manner. In this case, whenever readers purchase that individual research paper for reading, maximum 60% of its profit earned as royalty by Global Journals, will be credited to his/her bank account. The entire entitled amount will be credited to

his/her bank account exceeding limit of minimum fixed balance. There is no minimum time limit for collection. The FARSC member can decide its price and we can help in making the right decision.

The FARSB member is eligible to join as a paid peer reviewer at Global Journals Incorporation (USA) and can get remuneration of 15% of author fees, taken from the author of a respective paper. After reviewing 5 or more papers you can request to transfer the amount to your bank account.

MEMBER OF ASSOCIATION OF RESEARCH SOCIETY IN BUSINESS (MARSB)

The 'MARSB' title is accorded to a selected professional after the approval of the Editor-in-Chief / Editorial Board Members/Dean.

MARSB accrediting is an honor. It authenticates your research activities. After becoming MARSB, you can add 'MARSB' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and repute to your name. You may use it on your professional Counseling Materials such as CV, Resume, Visiting Card and Name Plate etc.

The following benefitscan be availed by you only for next three years from the date of certification.

MARSB designated members are entitled to avail a 25% discount while publishing their research papers (of a single author) in Global Journals Inc., if the same is accepted by our Editorial Board and Peer Reviewers. If you are a main author or coauthor of a group of authors, you will get discount of 10%.

As MARSB, you will be given a renowned, secure and free professional email address with 30 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders, Auto-Responders, Email Delivery Route tracing, etc.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The MARSB member can apply for approval, grading and certification of standards of their educational and Institutional Degrees to Open Association of Research, Society U.S.A.

Once you are designated as MARSB, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria.

It is mandatory to read all terms and conditions carefully.

AUXILIARY MEMBERSHIPS

Institutional Fellow of Open Association of Research Society (USA)-OARS (USA)

Global Journals Incorporation (USA) is accredited by Open Association of Research Society, U.S.A (OARS) and in turn, affiliates research institutions as "Institutional Fellow of Open Association of Research Society" (IFOARS).

The "FARSC" is a dignified title which is accorded to a person's name viz. Dr. John E. Hall, Ph.D., FARSC or William Walldroff, M.S., FARSC.

The IFOARS institution is entitled to form a Board comprised of one Chairperson and three to five board members preferably from different streams. The Board will be recognized as "Institutional Board of Open Association of Research Society"-(IBOARS).

The Institute will be entitled to following benefits:

The IBOARS can initially review research papers of their institute and recommend them to publish with respective journal of Global Journals. It can also review the papers of other institutions after obtaining our consent. The second review will be done by peer reviewer of Global Journals Incorporation (USA) The Board is at liberty to appoint a peer reviewer with the approval of chairperson after consulting us.

The author fees of such paper may be waived off up to 40%.

The Global Journals Incorporation (USA) at its discretion can also refer double blind peer reviewed paper at their end to the board for the verification and to get recommendation for final stage of acceptance of publication.

The IBOARS can organize symposium/seminar/conference in their country on penal or Global Journals Incorporation (USA)-OARS (USA). The terms and conditions can be discussed separately.

The Board can also play vital role by exploring and giving valuable suggestions regarding the Standards of "Open Association of Research Society, U.S.A (OARS)" so that proper amendment can take place for the benefit of entire research community. We shall provide details of particular standard only on receipt of request from the Board.

The board members can also join us as Individual Fellow with 40% discount on total fees applicable to Individual Fellow. They will be entitled to avail all the benefits as declared. Please visit Individual Fellow-sub menu of GlobalJournals.org to have more relevant details.

Journals Research relevant details.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

After nomination of your institution as "Institutional Fellow" and constantly functioning successfully for one year, we can consider giving recognition to your institute to function as Regional/Zonal office on our behalf.

The board can also take up the additional allied activities for betterment after our consultation.

The following entitlements are applicable to individual Fellows:

Open Association of Research Society, U.S.A (OARS) By-laws states that an individual Fellow may use the designations as applicable, or the corresponding initials. The Credentials of individual Fellow and Associate designations signify that the individual has gained knowledge of the fundamental concepts. One is magnanimous and proficient in an expertise course covering the professional code of conduct, and follows recognized standards of practice.

Open Association of Research Society (US)/ Global Journals Incorporation (USA), as described in Corporate Statements, are educational, research publishing and PROBLEM RADIO professional membership organizations. Achieving our individual Fellow or Associate status is based mainly on meeting stated educational research requirements.

Disbursement of 40% Royalty earned through Global Journals: Researcher = 50%, Peer Reviewer = 37.50%, Institution = 12.50% E.g. Out of 40%, the 20% benefit should be passed on to researcher, 15 % benefit towards remuneration should be given to a reviewer and remaining 5% is to be retained by the institution.

We shall provide print version of 12 issues of any three journals [as per your requirement] out of our 38 journals worth \$ 2376 USD.

Other:

The individual Fellow and Associate designations accredited by Open Association of Research Society (US) credentials signify guarantees following achievements:

The professional accredited with Fellow honor, is entitled to various benefits viz. name, fame, honor, regular flow of income, secured bright future, social status etc.

© Copyright by Global Journals Inc.(US)| Guidelines Handbook

- In addition to above, if one is single author, then entitled to 40% discount on publishing research paper and can get 10% discount if one is co-author or main author among group of authors.
- The Fellow can organize symposium/seminar/conference on behalf of Global Journals Incorporation (USA) and he/she can also attend the same organized by other institutes on behalf of Global Journals.
- The Fellow can become member of Editorial Board Member after completing 3yrs.
- ➤ The Fellow can earn 60% of sales proceeds from the sale of reference/review books/literature/publishing of research paper.
- > Fellow can also join as paid peer reviewer and earn 15% remuneration of author charges and can also get an opportunity to join as member of the Editorial Board of Global Journals Incorporation (USA)
- This individual has learned the basic methods of applying those concepts and techniques to common challenging situations. This individual has further demonstrated an in-depth understanding of the application of suitable techniques to a particular area of research practice.

Note:

- In future, if the board feels the necessity to change any board member, the same can be done with the consent of the chairperson along with anyone board member without our approval.
- In case, the chairperson needs to be replaced then consent of 2/3rd board members are required and they are also required to jointly pass the resolution copy of which should be sent to us. In such case, it will be compulsory to obtain our approval before replacement.
- In case of "Difference of Opinion [if any]" among the Board members, our decision will be final and binding to everyone.

PROCESS OF SUBMISSION OF RESEARCH PAPER

The Area or field of specialization may or may not be of any category as mentioned in 'Scope of Journal' menu of the GlobalJournals.org website. There are 37 Research Journal categorized with Six parental Journals GJCST, GJMR, GJRE, GJMBR, GJSFR, GJHSS. For Authors should prefer the mentioned categories. There are three widely used systems UDC, DDC and LCC. The details are available as 'Knowledge Abstract' at Home page. The major advantage of this coding is that, the research work will be exposed to and shared with all over the world as we are being abstracted and indexed worldwide.

The paper should be in proper format. The format can be downloaded from first page of 'Author Guideline' Menu. The Author is expected to follow the general rules as mentioned in this menu. The paper should be written in MS-Word Format (*.DOC,*.DOCX).

The Author can submit the paper either online or offline. The authors should prefer online submission. Online Submission: There are three ways to submit your paper:

- (A) (I) First, register yourself using top right corner of Home page then Login. If you are already registered, then login using your username and password.
 - (II) Choose corresponding Journal.
 - (III) Click 'Submit Manuscript'. Fill required information and Upload the paper.
- (B) If you are using Internet Explorer, then Direct Submission through Homepage is also available.
- (C) If these two are not convenient, and then email the paper directly to dean@globaljournals.org.

Offline Submission: Author can send the typed form of paper by Post. However, online submission should be preferred.

Preferred Author Guidelines

MANUSCRIPT STYLE INSTRUCTION (Must be strictly followed)

Page Size: 8.27" X 11""

Left Margin: 0.65Right Margin: 0.65Top Margin: 0.75Bottom Margin: 0.75

- Font type of all text should be Swis 721 Lt BT.
- Paper Title should be of Font Size 24 with one Column section.
- Author Name in Font Size of 11 with one column as of Title.
- Abstract Font size of 9 Bold, "Abstract" word in Italic Bold.
- Main Text: Font size 10 with justified two columns section
- Two Column with Equal Column with of 3.38 and Gaping of .2
- First Character must be three lines Drop capped.
- Paragraph before Spacing of 1 pt and After of 0 pt.
- Line Spacing of 1 pt
- Large Images must be in One Column
- Numbering of First Main Headings (Heading 1) must be in Roman Letters, Capital Letter, and Font Size of 10.
- Numbering of Second Main Headings (Heading 2) must be in Alphabets, Italic, and Font Size of 10.

You can use your own standard format also.

Author Guidelines:

- 1. General,
- 2. Ethical Guidelines,
- 3. Submission of Manuscripts,
- 4. Manuscript's Category,
- 5. Structure and Format of Manuscript,
- 6. After Acceptance.

1. GENERAL

Before submitting your research paper, one is advised to go through the details as mentioned in following heads. It will be beneficial, while peer reviewer justify your paper for publication.

Scope

The Global Journals Inc. (US) welcome the submission of original paper, review paper, survey article relevant to the all the streams of Philosophy and knowledge. The Global Journals Inc. (US) is parental platform for Global Journal of Computer Science and Technology, Researches in Engineering, Medical Research, Science Frontier Research, Human Social Science, Management, and Business organization. The choice of specific field can be done otherwise as following in Abstracting and Indexing Page on this Website. As the all Global

Journals Inc. (US) are being abstracted and indexed (in process) by most of the reputed organizations. Topics of only narrow interest will not be accepted unless they have wider potential or consequences.

2. ETHICAL GUIDELINES

Authors should follow the ethical guidelines as mentioned below for publication of research paper and research activities.

Papers are accepted on strict understanding that the material in whole or in part has not been, nor is being, considered for publication elsewhere. If the paper once accepted by Global Journals Inc. (US) and Editorial Board, will become the copyright of the Global Journals Inc. (US).

Authorship: The authors and coauthors should have active contribution to conception design, analysis and interpretation of findings. They should critically review the contents and drafting of the paper. All should approve the final version of the paper before submission

The Global Journals Inc. (US) follows the definition of authorship set up by the Global Academy of Research and Development. According to the Global Academy of R&D authorship, criteria must be based on:

- 1) Substantial contributions to conception and acquisition of data, analysis and interpretation of the findings.
- 2) Drafting the paper and revising it critically regarding important academic content.
- 3) Final approval of the version of the paper to be published.

All authors should have been credited according to their appropriate contribution in research activity and preparing paper. Contributors who do not match the criteria as authors may be mentioned under Acknowledgement.

Acknowledgements: Contributors to the research other than authors credited should be mentioned under acknowledgement. The specifications of the source of funding for the research if appropriate can be included. Suppliers of resources may be mentioned along with address.

Appeal of Decision: The Editorial Board's decision on publication of the paper is final and cannot be appealed elsewhere.

Permissions: It is the author's responsibility to have prior permission if all or parts of earlier published illustrations are used in this paper.

Please mention proper reference and appropriate acknowledgements wherever expected.

If all or parts of previously published illustrations are used, permission must be taken from the copyright holder concerned. It is the author's responsibility to take these in writing.

Approval for reproduction/modification of any information (including figures and tables) published elsewhere must be obtained by the authors/copyright holders before submission of the manuscript. Contributors (Authors) are responsible for any copyright fee involved.

3. SUBMISSION OF MANUSCRIPTS

Manuscripts should be uploaded via this online submission page. The online submission is most efficient method for submission of papers, as it enables rapid distribution of manuscripts and consequently speeds up the review procedure. It also enables authors to know the status of their own manuscripts by emailing us. Complete instructions for submitting a paper is available below.

Manuscript submission is a systematic procedure and little preparation is required beyond having all parts of your manuscript in a given format and a computer with an Internet connection and a Web browser. Full help and instructions are provided on-screen. As an author, you will be prompted for login and manuscript details as Field of Paper and then to upload your manuscript file(s) according to the instructions.

To avoid postal delays, all transaction is preferred by e-mail. A finished manuscript submission is confirmed by e-mail immediately and your paper enters the editorial process with no postal delays. When a conclusion is made about the publication of your paper by our Editorial Board, revisions can be submitted online with the same procedure, with an occasion to view and respond to all comments.

Complete support for both authors and co-author is provided.

4. MANUSCRIPT'S CATEGORY

Based on potential and nature, the manuscript can be categorized under the following heads:

Original research paper: Such papers are reports of high-level significant original research work.

Review papers: These are concise, significant but helpful and decisive topics for young researchers.

Research articles: These are handled with small investigation and applications

Research letters: The letters are small and concise comments on previously published matters.

5.STRUCTURE AND FORMAT OF MANUSCRIPT

The recommended size of original research paper is less than seven thousand words, review papers fewer than seven thousands words also. Preparation of research paper or how to write research paper, are major hurdle, while writing manuscript. The research articles and research letters should be fewer than three thousand words, the structure original research paper; sometime review paper should be as follows:

Papers: These are reports of significant research (typically less than 7000 words equivalent, including tables, figures, references), and comprise:

- (a) Title should be relevant and commensurate with the theme of the paper.
- (b) A brief Summary, "Abstract" (less than 150 words) containing the major results and conclusions.
- (c) Up to ten keywords, that precisely identifies the paper's subject, purpose, and focus.
- (d) An Introduction, giving necessary background excluding subheadings; objectives must be clearly declared.
- (e) Resources and techniques with sufficient complete experimental details (wherever possible by reference) to permit repetition; sources of information must be given and numerical methods must be specified by reference, unless non-standard.
- (f) Results should be presented concisely, by well-designed tables and/or figures; the same data may not be used in both; suitable statistical data should be given. All data must be obtained with attention to numerical detail in the planning stage. As reproduced design has been recognized to be important to experiments for a considerable time, the Editor has decided that any paper that appears not to have adequate numerical treatments of the data will be returned un-refereed;
- (g) Discussion should cover the implications and consequences, not just recapitulating the results; conclusions should be summarizing.
- (h) Brief Acknowledgements.
- (i) References in the proper form.

Authors should very cautiously consider the preparation of papers to ensure that they communicate efficiently. Papers are much more likely to be accepted, if they are cautiously designed and laid out, contain few or no errors, are summarizing, and be conventional to the approach and instructions. They will in addition, be published with much less delays than those that require much technical and editorial correction.

The Editorial Board reserves the right to make literary corrections and to make suggestions to improve briefness.

It is vital, that authors take care in submitting a manuscript that is written in simple language and adheres to published guidelines.

Format

Language: The language of publication is UK English. Authors, for whom English is a second language, must have their manuscript efficiently edited by an English-speaking person before submission to make sure that, the English is of high excellence. It is preferable, that manuscripts should be professionally edited.

Standard Usage, Abbreviations, and Units: Spelling and hyphenation should be conventional to The Concise Oxford English Dictionary. Statistics and measurements should at all times be given in figures, e.g. 16 min, except for when the number begins a sentence. When the number does not refer to a unit of measurement it should be spelt in full unless, it is 160 or greater.

Abbreviations supposed to be used carefully. The abbreviated name or expression is supposed to be cited in full at first usage, followed by the conventional abbreviation in parentheses.

Metric SI units are supposed to generally be used excluding where they conflict with current practice or are confusing. For illustration, 1.4 I rather than $1.4 \times 10-3$ m3, or 4 mm somewhat than $4 \times 10-3$ m. Chemical formula and solutions must identify the form used, e.g. anhydrous or hydrated, and the concentration must be in clearly defined units. Common species names should be followed by underlines at the first mention. For following use the generic name should be constricted to a single letter, if it is clear.

Structure

All manuscripts submitted to Global Journals Inc. (US), ought to include:

Title: The title page must carry an instructive title that reflects the content, a running title (less than 45 characters together with spaces), names of the authors and co-authors, and the place(s) wherever the work was carried out. The full postal address in addition with the email address of related author must be given. Up to eleven keywords or very brief phrases have to be given to help data retrieval, mining and indexing.

Abstract, used in Original Papers and Reviews:

Optimizing Abstract for Search Engines

Many researchers searching for information online will use search engines such as Google, Yahoo or similar. By optimizing your paper for search engines, you will amplify the chance of someone finding it. This in turn will make it more likely to be viewed and/or cited in a further work. Global Journals Inc. (US) have compiled these guidelines to facilitate you to maximize the web-friendliness of the most public part of your paper.

Key Words

A major linchpin in research work for the writing research paper is the keyword search, which one will employ to find both library and Internet resources.

One must be persistent and creative in using keywords. An effective keyword search requires a strategy and planning a list of possible keywords and phrases to try.

Search engines for most searches, use Boolean searching, which is somewhat different from Internet searches. The Boolean search uses "operators," words (and, or, not, and near) that enable you to expand or narrow your affords. Tips for research paper while preparing research paper are very helpful guideline of research paper.

Choice of key words is first tool of tips to write research paper. Research paper writing is an art.A few tips for deciding as strategically as possible about keyword search:

© Copyright by Global Journals Inc.(US)| Guidelines Handbook

- One should start brainstorming lists of possible keywords before even begin searching. Think about the most important concepts related to research work. Ask, "What words would a source have to include to be truly valuable in research paper?" Then consider synonyms for the important words.
- It may take the discovery of only one relevant paper to let steer in the right keyword direction because in most databases, the keywords under which a research paper is abstracted are listed with the paper.
- One should avoid outdated words.

Keywords are the key that opens a door to research work sources. Keyword searching is an art in which researcher's skills are bound to improve with experience and time.

Numerical Methods: Numerical methods used should be clear and, where appropriate, supported by references.

Acknowledgements: Please make these as concise as possible.

References

References follow the Harvard scheme of referencing. References in the text should cite the authors' names followed by the time of their publication, unless there are three or more authors when simply the first author's name is quoted followed by et al. unpublished work has to only be cited where necessary, and only in the text. Copies of references in press in other journals have to be supplied with submitted typescripts. It is necessary that all citations and references be carefully checked before submission, as mistakes or omissions will cause delays.

References to information on the World Wide Web can be given, but only if the information is available without charge to readers on an official site. Wikipedia and Similar websites are not allowed where anyone can change the information. Authors will be asked to make available electronic copies of the cited information for inclusion on the Global Journals Inc. (US) homepage at the judgment of the Editorial Board.

The Editorial Board and Global Journals Inc. (US) recommend that, citation of online-published papers and other material should be done via a DOI (digital object identifier). If an author cites anything, which does not have a DOI, they run the risk of the cited material not being noticeable.

The Editorial Board and Global Journals Inc. (US) recommend the use of a tool such as Reference Manager for reference management and formatting.

Tables, Figures and Figure Legends

Tables: Tables should be few in number, cautiously designed, uncrowned, and include only essential data. Each must have an Arabic number, e.g. Table 4, a self-explanatory caption and be on a separate sheet. Vertical lines should not be used.

Figures: Figures are supposed to be submitted as separate files. Always take in a citation in the text for each figure using Arabic numbers, e.g. Fig. 4. Artwork must be submitted online in electronic form by e-mailing them.

Preparation of Electronic Figures for Publication

Even though low quality images are sufficient for review purposes, print publication requires high quality images to prevent the final product being blurred or fuzzy. Submit (or e-mail) EPS (line art) or TIFF (halftone/photographs) files only. MS PowerPoint and Word Graphics are unsuitable for printed pictures. Do not use pixel-oriented software. Scans (TIFF only) should have a resolution of at least 350 dpi (halftone) or 700 to 1100 dpi (line drawings) in relation to the imitation size. Please give the data for figures in black and white or submit a Color Work Agreement Form. EPS files must be saved with fonts embedded (and with a TIFF preview, if possible).

For scanned images, the scanning resolution (at final image size) ought to be as follows to ensure good reproduction: line art: >650 dpi; halftones (including gel photographs) : >350 dpi; figures containing both halftone and line images: >650 dpi.

Color Charges: It is the rule of the Global Journals Inc. (US) for authors to pay the full cost for the reproduction of their color artwork. Hence, please note that, if there is color artwork in your manuscript when it is accepted for publication, we would require you to complete and return a color work agreement form before your paper can be published.

(

Figure Legends: Self-explanatory legends of all figures should be incorporated separately under the heading 'Legends to Figures'. In the full-text online edition of the journal, figure legends may possibly be truncated in abbreviated links to the full screen version. Therefore, the first 100 characters of any legend should notify the reader, about the key aspects of the figure.

6. AFTER ACCEPTANCE

Upon approval of a paper for publication, the manuscript will be forwarded to the dean, who is responsible for the publication of the Global Journals Inc. (US).

6.1 Proof Corrections

The corresponding author will receive an e-mail alert containing a link to a website or will be attached. A working e-mail address must therefore be provided for the related author.

Acrobat Reader will be required in order to read this file. This software can be downloaded

(Free of charge) from the following website:

www.adobe.com/products/acrobat/readstep2.html. This will facilitate the file to be opened, read on screen, and printed out in order for any corrections to be added. Further instructions will be sent with the proof.

Proofs must be returned to the dean at dean@globaljournals.org within three days of receipt.

As changes to proofs are costly, we inquire that you only correct typesetting errors. All illustrations are retained by the publisher. Please note that the authors are responsible for all statements made in their work, including changes made by the copy editor.

6.2 Early View of Global Journals Inc. (US) (Publication Prior to Print)

The Global Journals Inc. (US) are enclosed by our publishing's Early View service. Early View articles are complete full-text articles sent in advance of their publication. Early View articles are absolute and final. They have been completely reviewed, revised and edited for publication, and the authors' final corrections have been incorporated. Because they are in final form, no changes can be made after sending them. The nature of Early View articles means that they do not yet have volume, issue or page numbers, so Early View articles cannot be cited in the conventional way.

6.3 Author Services

Online production tracking is available for your article through Author Services. Author Services enables authors to track their article once it has been accepted - through the production process to publication online and in print. Authors can check the status of their articles online and choose to receive automated e-mails at key stages of production. The authors will receive an e-mail with a unique link that enables them to register and have their article automatically added to the system. Please ensure that a complete e-mail address is provided when submitting the manuscript.

6.4 Author Material Archive Policy

Please note that if not specifically requested, publisher will dispose off hardcopy & electronic information submitted, after the two months of publication. If you require the return of any information submitted, please inform the Editorial Board or dean as soon as possible.

6.5 Offprint and Extra Copies

A PDF offprint of the online-published article will be provided free of charge to the related author, and may be distributed according to the Publisher's terms and conditions. Additional paper offprint may be ordered by emailing us at: editor@globaljournals.org.

You must strictly follow above Author Guidelines before submitting your paper or else we will not at all be responsible for any corrections in future in any of the way.

Before start writing a good quality Computer Science Research Paper, let us first understand what is Computer Science Research Paper? So, Computer Science Research Paper is the paper which is written by professionals or scientists who are associated to Computer Science and Information Technology, or doing research study in these areas. If you are novel to this field then you can consult about this field from your supervisor or guide.

TECHNIQUES FOR WRITING A GOOD QUALITY RESEARCH PAPER:

- 1. Choosing the topic: In most cases, the topic is searched by the interest of author but it can be also suggested by the guides. You can have several topics and then you can judge that in which topic or subject you are finding yourself most comfortable. This can be done by asking several questions to yourself, like Will I be able to carry our search in this area? Will I find all necessary recourses to accomplish the search? Will I be able to find all information in this field area? If the answer of these types of questions will be "Yes" then you can choose that topic. In most of the cases, you may have to conduct the surveys and have to visit several places because this field is related to Computer Science and Information Technology. Also, you may have to do a lot of work to find all rise and falls regarding the various data of that subject. Sometimes, detailed information plays a vital role, instead of short information.
- **2. Evaluators are human:** First thing to remember that evaluators are also human being. They are not only meant for rejecting a paper. They are here to evaluate your paper. So, present your Best.
- **3.** Think Like Evaluators: If you are in a confusion or getting demotivated that your paper will be accepted by evaluators or not, then think and try to evaluate your paper like an Evaluator. Try to understand that what an evaluator wants in your research paper and automatically you will have your answer.
- **4. Make blueprints of paper:** The outline is the plan or framework that will help you to arrange your thoughts. It will make your paper logical. But remember that all points of your outline must be related to the topic you have chosen.
- **5. Ask your Guides:** If you are having any difficulty in your research, then do not hesitate to share your difficulty to your guide (if you have any). They will surely help you out and resolve your doubts. If you can't clarify what exactly you require for your work then ask the supervisor to help you with the alternative. He might also provide you the list of essential readings.
- 6. Use of computer is recommended: As you are doing research in the field of Computer Science, then this point is quite obvious.
- 7. Use right software: Always use good quality software packages. If you are not capable to judge good software then you can lose quality of your paper unknowingly. There are various software programs available to help you, which you can get through Internet.
- **8. Use the Internet for help:** An excellent start for your paper can be by using the Google. It is an excellent search engine, where you can have your doubts resolved. You may also read some answers for the frequent question how to write my research paper or find model research paper. From the internet library you can download books. If you have all required books make important reading selecting and analyzing the specified information. Then put together research paper sketch out.
- 9. Use and get big pictures: Always use encyclopedias, Wikipedia to get pictures so that you can go into the depth.
- 10. Bookmarks are useful: When you read any book or magazine, you generally use bookmarks, right! It is a good habit, which helps to not to lose your continuity. You should always use bookmarks while searching on Internet also, which will make your search easier.
- 11. Revise what you wrote: When you write anything, always read it, summarize it and then finalize it.

- **12. Make all efforts:** Make all efforts to mention what you are going to write in your paper. That means always have a good start. Try to mention everything in introduction, that what is the need of a particular research paper. Polish your work by good skill of writing and always give an evaluator, what he wants.
- **13. Have backups:** When you are going to do any important thing like making research paper, you should always have backup copies of it either in your computer or in paper. This will help you to not to lose any of your important.
- **14. Produce good diagrams of your own:** Always try to include good charts or diagrams in your paper to improve quality. Using several and unnecessary diagrams will degrade the quality of your paper by creating "hotchpotch." So always, try to make and include those diagrams, which are made by your own to improve readability and understandability of your paper.
- **15. Use of direct quotes:** When you do research relevant to literature, history or current affairs then use of quotes become essential but if study is relevant to science then use of quotes is not preferable.
- **16. Use proper verb tense:** Use proper verb tenses in your paper. Use past tense, to present those events that happened. Use present tense to indicate events that are going on. Use future tense to indicate future happening events. Use of improper and wrong tenses will confuse the evaluator. Avoid the sentences that are incomplete.
- **17. Never use online paper:** If you are getting any paper on Internet, then never use it as your research paper because it might be possible that evaluator has already seen it or maybe it is outdated version.
- **18. Pick a good study spot:** To do your research studies always try to pick a spot, which is quiet. Every spot is not for studies. Spot that suits you choose it and proceed further.
- **19. Know what you know:** Always try to know, what you know by making objectives. Else, you will be confused and cannot achieve your target.
- **20.** Use good quality grammar: Always use a good quality grammar and use words that will throw positive impact on evaluator. Use of good quality grammar does not mean to use tough words, that for each word the evaluator has to go through dictionary. Do not start sentence with a conjunction. Do not fragment sentences. Eliminate one-word sentences. Ignore passive voice. Do not ever use a big word when a diminutive one would suffice. Verbs have to be in agreement with their subjects. Prepositions are not expressions to finish sentences with. It is incorrect to ever divide an infinitive. Avoid clichés like the disease. Also, always shun irritating alliteration. Use language that is simple and straight forward. put together a neat summary.
- 21. Arrangement of information: Each section of the main body should start with an opening sentence and there should be a changeover at the end of the section. Give only valid and powerful arguments to your topic. You may also maintain your arguments with records.
- **22. Never start in last minute:** Always start at right time and give enough time to research work. Leaving everything to the last minute will degrade your paper and spoil your work.
- 23. Multitasking in research is not good: Doing several things at the same time proves bad habit in case of research activity. Research is an area, where everything has a particular time slot. Divide your research work in parts and do particular part in particular time slot.
- **24. Never copy others' work:** Never copy others' work and give it your name because if evaluator has seen it anywhere you will be in trouble.
- **25.** Take proper rest and food: No matter how many hours you spend for your research activity, if you are not taking care of your health then all your efforts will be in vain. For a quality research, study is must, and this can be done by taking proper rest and food.
- 26. Go for seminars: Attend seminars if the topic is relevant to your research area. Utilize all your resources.

© Copyright by Global Journals Inc.(US)| Guidelines Handbook

- **27. Refresh your mind after intervals:** Try to give rest to your mind by listening to soft music or by sleeping in intervals. This will also improve your memory.
- **28. Make colleagues:** Always try to make colleagues. No matter how sharper or intelligent you are, if you make colleagues you can have several ideas, which will be helpful for your research.
- 29. Think technically: Always think technically. If anything happens, then search its reasons, its benefits, and demerits.
- **30. Think and then print:** When you will go to print your paper, notice that tables are not be split, headings are not detached from their descriptions, and page sequence is maintained.
- **31.** Adding unnecessary information: Do not add unnecessary information, like, I have used MS Excel to draw graph. Do not add irrelevant and inappropriate material. These all will create superfluous. Foreign terminology and phrases are not apropos. One should NEVER take a broad view. Analogy in script is like feathers on a snake. Not at all use a large word when a very small one would be sufficient. Use words properly, regardless of how others use them. Remove quotations. Puns are for kids, not grunt readers. Amplification is a billion times of inferior quality than sarcasm.
- **32. Never oversimplify everything:** To add material in your research paper, never go for oversimplification. This will definitely irritate the evaluator. Be more or less specific. Also too, by no means, ever use rhythmic redundancies. Contractions aren't essential and shouldn't be there used. Comparisons are as terrible as clichés. Give up ampersands and abbreviations, and so on. Remove commas, that are, not necessary. Parenthetical words however should be together with this in commas. Understatement is all the time the complete best way to put onward earth-shaking thoughts. Give a detailed literary review.
- **33. Report concluded results:** Use concluded results. From raw data, filter the results and then conclude your studies based on measurements and observations taken. Significant figures and appropriate number of decimal places should be used. Parenthetical remarks are prohibitive. Proofread carefully at final stage. In the end give outline to your arguments. Spot out perspectives of further study of this subject. Justify your conclusion by at the bottom of them with sufficient justifications and examples.
- **34. After conclusion:** Once you have concluded your research, the next most important step is to present your findings. Presentation is extremely important as it is the definite medium though which your research is going to be in print to the rest of the crowd. Care should be taken to categorize your thoughts well and present them in a logical and neat manner. A good quality research paper format is essential because it serves to highlight your research paper and bring to light all necessary aspects in your research.

INFORMAL GUIDELINES OF RESEARCH PAPER WRITING

Key points to remember:

- Submit all work in its final form.
- Write your paper in the form, which is presented in the guidelines using the template.
- Please note the criterion for grading the final paper by peer-reviewers.

Final Points:

A purpose of organizing a research paper is to let people to interpret your effort selectively. The journal requires the following sections, submitted in the order listed, each section to start on a new page.

The introduction will be compiled from reference matter and will reflect the design processes or outline of basis that direct you to make study. As you will carry out the process of study, the method and process section will be constructed as like that. The result segment will show related statistics in nearly sequential order and will direct the reviewers next to the similar intellectual paths throughout the data that you took to carry out your study. The discussion section will provide understanding of the data and projections as to the implication of the results. The use of good quality references all through the paper will give the effort trustworthiness by representing an alertness of prior workings.

Writing a research paper is not an easy job no matter how trouble-free the actual research or concept. Practice, excellent preparation, and controlled record keeping are the only means to make straightforward the progression.

General style:

Specific editorial column necessities for compliance of a manuscript will always take over from directions in these general guidelines.

To make a paper clear

· Adhere to recommended page limits

Mistakes to evade

- Insertion a title at the foot of a page with the subsequent text on the next page
- Separating a table/chart or figure impound each figure/table to a single page
- Submitting a manuscript with pages out of sequence

In every sections of your document

- · Use standard writing style including articles ("a", "the," etc.)
- · Keep on paying attention on the research topic of the paper
- · Use paragraphs to split each significant point (excluding for the abstract)
- · Align the primary line of each section
- · Present your points in sound order
- \cdot Use present tense to report well accepted
- · Use past tense to describe specific results
- · Shun familiar wording, don't address the reviewer directly, and don't use slang, slang language, or superlatives
- · Shun use of extra pictures include only those figures essential to presenting results

Title Page:

Choose a revealing title. It should be short. It should not have non-standard acronyms or abbreviations. It should not exceed two printed lines. It should include the name(s) and address (es) of all authors.

Abstract:

The summary should be two hundred words or less. It should briefly and clearly explain the key findings reported in the manuscript—must have precise statistics. It should not have abnormal acronyms or abbreviations. It should be logical in itself. Shun citing references at this point.

An abstract is a brief distinct paragraph summary of finished work or work in development. In a minute or less a reviewer can be taught the foundation behind the study, common approach to the problem, relevant results, and significant conclusions or new questions.

Write your summary when your paper is completed because how can you write the summary of anything which is not yet written? Wealth of terminology is very essential in abstract. Yet, use comprehensive sentences and do not let go readability for briefness. You can maintain it succinct by phrasing sentences so that they provide more than lone rationale. The author can at this moment go straight to shortening the outcome. Sum up the study, with the subsequent elements in any summary. Try to maintain the initial two items to no more than one ruling each.

- Reason of the study theory, overall issue, purpose
- Fundamental goal
- To the point depiction of the research
- Consequences, including <u>definite statistics</u> if the consequences are quantitative in nature, account quantitative data; results of any numerical analysis should be reported
- Significant conclusions or questions that track from the research(es)

Approach:

- Single section, and succinct
- As a outline of job done, it is always written in past tense
- A conceptual should situate on its own, and not submit to any other part of the paper such as a form or table
- Center on shortening results bound background information to a verdict or two, if completely necessary
- What you account in an conceptual must be regular with what you reported in the manuscript
- Exact spelling, clearness of sentences and phrases, and appropriate reporting of quantities (proper units, important statistics) are just as significant in an abstract as they are anywhere else

Introduction:

The **Introduction** should "introduce" the manuscript. The reviewer should be presented with sufficient background information to be capable to comprehend and calculate the purpose of your study without having to submit to other works. The basis for the study should be offered. Give most important references but shun difficult to make a comprehensive appraisal of the topic. In the introduction, describe the problem visibly. If the problem is not acknowledged in a logical, reasonable way, the reviewer will have no attention in your result. Speak in common terms about techniques used to explain the problem, if needed, but do not present any particulars about the protocols here. Following approach can create a valuable beginning:

- Explain the value (significance) of the study
- Shield the model why did you employ this particular system or method? What is its compensation? You strength remark on its appropriateness from a abstract point of vision as well as point out sensible reasons for using it.
- Present a justification. Status your particular theory (es) or aim(s), and describe the logic that led you to choose them.
- Very for a short time explain the tentative propose and how it skilled the declared objectives.

Approach:

- Use past tense except for when referring to recognized facts. After all, the manuscript will be submitted after the entire job is
 done.
- Sort out your thoughts; manufacture one key point with every section. If you make the four points listed above, you will need a
 least of four paragraphs.

- Present surroundings information only as desirable in order hold up a situation. The reviewer does not desire to read the
 whole thing you know about a topic.
- Shape the theory/purpose specifically do not take a broad view.
- As always, give awareness to spelling, simplicity and correctness of sentences and phrases.

Procedures (Methods and Materials):

This part is supposed to be the easiest to carve if you have good skills. A sound written Procedures segment allows a capable scientist to replacement your results. Present precise information about your supplies. The suppliers and clarity of reagents can be helpful bits of information. Present methods in sequential order but linked methodologies can be grouped as a segment. Be concise when relating the protocols. Attempt for the least amount of information that would permit another capable scientist to spare your outcome but be cautious that vital information is integrated. The use of subheadings is suggested and ought to be synchronized with the results section. When a technique is used that has been well described in another object, mention the specific item describing a way but draw the basic principle while stating the situation. The purpose is to text all particular resources and broad procedures, so that another person may use some or all of the methods in one more study or referee the scientific value of your work. It is not to be a step by step report of the whole thing you did, nor is a methods section a set of orders.

Materials:

- Explain materials individually only if the study is so complex that it saves liberty this way.
- Embrace particular materials, and any tools or provisions that are not frequently found in laboratories.
- Do not take in frequently found.
- If use of a definite type of tools.
- Materials may be reported in a part section or else they may be recognized along with your measures.

Methods:

- Report the method (not particulars of each process that engaged the same methodology)
- Describe the method entirely
- To be succinct, present methods under headings dedicated to specific dealings or groups of measures
- Simplify details how procedures were completed not how they were exclusively performed on a particular day.
- If well known procedures were used, account the procedure by name, possibly with reference, and that's all.

Approach:

- It is embarrassed or not possible to use vigorous voice when documenting methods with no using first person, which would focus the reviewer's interest on the researcher rather than the job. As a result when script up the methods most authors use third person passive voice.
- Use standard style in this and in every other part of the paper avoid familiar lists, and use full sentences.

What to keep away from

- Resources and methods are not a set of information.
- Skip all descriptive information and surroundings save it for the argument.
- Leave out information that is immaterial to a third party.

Results:

The principle of a results segment is to present and demonstrate your conclusion. Create this part a entirely objective details of the outcome, and save all understanding for the discussion.

The page length of this segment is set by the sum and types of data to be reported. Carry on to be to the point, by means of statistics and tables, if suitable, to present consequences most efficiently. You must obviously differentiate material that would usually be incorporated in a study editorial from any unprocessed data or additional appendix matter that would not be available. In fact, such matter should not be submitted at all except requested by the instructor.

Content

- Sum up your conclusion in text and demonstrate them, if suitable, with figures and tables.
- In manuscript, explain each of your consequences, point the reader to remarks that are most appropriate.
- Present a background, such as by describing the question that was addressed by creation an exacting study.
- Explain results of control experiments and comprise remarks that are not accessible in a prescribed figure or table, if appropriate.
- Examine your data, then prepare the analyzed (transformed) data in the form of a figure (graph), table, or in manuscript form.

What to stay away from

- Do not discuss or infer your outcome, report surroundings information, or try to explain anything.
- Not at all, take in raw data or intermediate calculations in a research manuscript.
- Do not present the similar data more than once.
- Manuscript should complement any figures or tables, not duplicate the identical information.
- Never confuse figures with tables there is a difference.

Approach

- As forever, use past tense when you submit to your results, and put the whole thing in a reasonable order.
- Put figures and tables, appropriately numbered, in order at the end of the report
- If you desire, you may place your figures and tables properly within the text of your results part.

Figures and tables

- If you put figures and tables at the end of the details, make certain that they are visibly distinguished from any attach appendix materials, such as raw facts
- Despite of position, each figure must be numbered one after the other and complete with subtitle
- In spite of position, each table must be titled, numbered one after the other and complete with heading
- All figure and table must be adequately complete that it could situate on its own, divide from text

Discussion:

The Discussion is expected the trickiest segment to write and describe. A lot of papers submitted for journal are discarded based on problems with the Discussion. There is no head of state for how long a argument should be. Position your understanding of the outcome visibly to lead the reviewer through your conclusions, and then finish the paper with a summing up of the implication of the study. The purpose here is to offer an understanding of your results and hold up for all of your conclusions, using facts from your research and accepted information, if suitable. The implication of result should he visibly described. generally Infer your data in the conversation in suitable depth. This means that when you clarify an observable fact you must explain mechanisms that may account for the observation. If your results vary from your prospect, make clear why that may have happened. If your results agree, then explain the theory that the proof supported. It is never suitable to just state that the data approved with prospect, and let it drop at that.

- Make a decision if each premise is supported, discarded, or if you cannot make a conclusion with assurance. Do not just dismiss a study or part of a study as "uncertain."
- Research papers are not acknowledged if the work is imperfect. Draw what conclusions you can based upon the results that you have, and take care of the study as a finished work
- You may propose future guidelines, such as how the experiment might be personalized to accomplish a new idea.
- Give details all of your remarks as much as possible, focus on mechanisms.
- Make a decision if the tentative design sufficiently addressed the theory, and whether or not it was correctly restricted.
- Try to present substitute explanations if sensible alternatives be present.
- One research will not counter an overall question, so maintain the large picture in mind, where do you go next? The best studies unlock new avenues of study. What questions remain?
- Recommendations for detailed papers will offer supplementary suggestions.

Approach:

- When you refer to information, differentiate data generated by your own studies from available information
- Submit to work done by specific persons (including you) in past tense.
- Submit to generally acknowledged facts and main beliefs in present tense.

THE ADMINISTRATION RULES

Please carefully note down following rules and regulation before submitting your Research Paper to Global Journals Inc. (US):

Segment Draft and Final Research Paper: You have to strictly follow the template of research paper. If it is not done your paper may get rejected.

- The **major constraint** is that you must independently make all content, tables, graphs, and facts that are offered in the paper. You must write each part of the paper wholly on your own. The Peer-reviewers need to identify your own perceptive of the concepts in your own terms. NEVER extract straight from any foundation, and never rephrase someone else's analysis.
- Do not give permission to anyone else to "PROOFREAD" your manuscript.
- Methods to avoid Plagiarism is applied by us on every paper, if found guilty, you will be blacklisted by all of our collaborated research groups, your institution will be informed for this and strict legal actions will be taken immediately.)
- To guard yourself and others from possible illegal use please do not permit anyone right to use to your paper and files.

CRITERION FOR GRADING A RESEARCH PAPER (COMPILATION) BY GLOBAL JOURNALS INC. (US)

Please note that following table is only a Grading of "Paper Compilation" and not on "Performed/Stated Research" whose grading solely depends on Individual Assigned Peer Reviewer and Editorial Board Member. These can be available only on request and after decision of Paper. This report will be the property of Global Journals Inc. (US).

Topics	Grades		
	А-В	C-D	E-F
Abstract	Clear and concise with appropriate content, Correct format. 200 words or below	Unclear summary and no specific data, Incorrect form Above 200 words	No specific data with ambiguous information Above 250 words
Introduction	Containing all background details with clear goal and appropriate details, flow specification, no grammar and spelling mistake, well organized sentence and paragraph, reference cited	Unclear and confusing data, appropriate format, grammar and spelling errors with unorganized matter	Out of place depth and content, hazy format
Methods and Procedures	Clear and to the point with well arranged paragraph, precision and accuracy of facts and figures, well organized subheads	Difficult to comprehend with embarrassed text, too much explanation but completed	Incorrect and unorganized structure with hazy meaning
Result	Well organized, Clear and specific, Correct units with precision, correct data, well structuring of paragraph, no grammar and spelling mistake	Complete and embarrassed text, difficult to comprehend	Irregular format with wrong facts and figures
Discussion	Well organized, meaningful specification, sound conclusion, logical and concise explanation, highly structured paragraph reference cited	Wordy, unclear conclusion, spurious	Conclusion is not cited, unorganized, difficult to comprehend
References	Complete and correct format, well organized	Beside the point, Incomplete	Wrong format and structuring
