Clove (Eugenia Caryophyllata) Extraction and Synthesis of New Pyrazole Derivatives from Eugenol

By S. Hamri, K. Rhazri, A. Hafid, H. Ouchetto, Y. Hajbi & M. Khouili

University Sultan Moulay Slimane, Morocco

Abstract- An efficient method for the preparation of novel 1,3,4-trisubstituted 4,5-dihydro-1H-pyrazoles via 1,3-dipolar cycloaddition has been described. Using this method, various pyrazole were synthesized from eugenol, a major phenolic constituent of clove bud essential oil, as dipolarophilic system and N-aryl-C-ethoxycarbonitrilimine: the (Z)-ethyl 2-bromo-2-(2-(4-chlorophenyl)-hydrazono) acetate.

Keywords: *clove (eugenia caryophyllata), eugenol, 1,3-dipolar cycloaddition, pyrazole, dipolarophile, nucleo-philic substitution (SN).*

Clove (Eugenia Caryophyllata) Extraction and Synthesis of New Pyrazole Derivatives from Eugenol

S. Hamri [α], K. Rhazri [σ], A. Hafid [ρ], H. Ouchetto [ω], Y. Hajbi [¥] & M. Khouili [§]

Abstract- **An efficient method for the preparation of novel 1,3,4-trisubstituted 4,5-dihydro-1*H*-pyrazoles via 1,3-dipolar cycloaddition has been described. Using this method, various pyrazole were synthesized from eugenol, a major phenolic constituent of clove bud essential oil, as dipolarophilic system and N-aryl-C-ethoxycarbonitrilimine: the (*Z*)-ethyl 2-bromo-2-(2-(4-chlorophenyl)-hydrazono) acetate.**

Keywords: clove (eugenia caryophyllata), eugenol, 1,3-dipolar cycloaddition, pyrazole, dipolarophile, nucleophilic substitution (SN).

I. Introduction

According to the literature, the majority of natural products derived from plants by different extraction methods. In bibliography, eugenol extracted from clove, is cited as a substance similar to an odorous oil, having the same functional groups as those of the family of natural allyl phenols such as chavicol (A), estragol (B), and osmorhyzol (C) (fig. 1).[1]

This is also the main component of the oil of clove (Eugenia caryophyllata), also present in many herbs like cinnamon.[2]

Eugenol **1** is used as raw material in the manufacture of several drugs. Thus, in dentistry, it is employed as an antiseptic, disinfectant and also widely used as an analgesic.[3, 4] This is also the major active ingredient of rhizoma Acori graminei (RAG). Cited in the literature as a medicinal herb that has been used for epilepsy and forgetting in East Asia for centuries, down cytotoxicity $A\beta_{1\text{-}40}$-induced PC-12 cells in vitro.[10]

In cosmetic and food products, it is used as a flavoring, antimicrobial, and antioxidant agent.[5] In addition to these antioxidant properties,[6] it protects neurons in culture from toxic events.[7] It has activities of anti-convulsive[8] and hypothermic[9] agent.

Complex heterocyclic systems such as: isomerization in polar protic solvents,[11] the conversion into ferulic acid,[12] oxidation[13] and enzymatic glycosylation of eugenol by cultured cells of *E. perriniana*.[14] Much of the synthetic strategy is devoted to the preparation of heterocyclic compounds derived from medicinal plants.

As part of our research, we have synthesized new pyrazole derivative structure from eugenol **1**. In this case, the 4-allyl-2 methoxyphenol (eugenol) **1** has a high reactivity, attributed to the functional groups of the aromatic ring. Recently, considerable attention has been focused on the development of new methodologies to synthesize many kinds of substituted pyrazolic subunit.[15] Indeed, these compounds are now widely recognized as important materials showing interesting biological activities and also as intermediate on heterocyclic chemistry. Many pyrazoles derivatives known to exhibit a wide range of biological properties such as antihyperglycemic, analgesic, anti-inflammatory, antibacterial, hypoglycaemic, sedative-hypnotic activity.[16] Although many pyrazoles have pharmacological activities,[17] those who have found a practical application, their activities are due more to the various substituents that the intrinsic activity of the pyrazole ring itself.

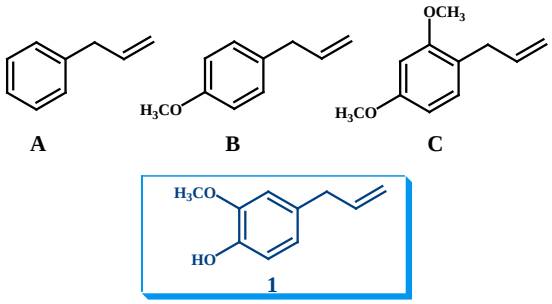

Fig. 1 : Names of allyl phenols natural

According to studies cited in the literature and those carried out in our laboratory for building five-membered pyrazole cycles prompted us to explore new methodologies for the synthesis of substituted 1-aryl-pyrazoles.[18]

According to studies cited in the literature and those carried in our laboratory for the construction of five-membered pyrazole cycles, we looked at the development of new methodologies for the synthesis of substituted 1-aryl-pyrazoles namely the 1,3-dipolar cycloaddition.[18] This is a process for the synthesis of several classes of azoles, such as isoxazoles, triazoles

Authors α σ ρ ω § : Laboratoire de Chimie Organique & Analytique, Faculté Sciences et Techniques, Université Sultan Moulay Slimane, BP 523, 23000 Beni Mellal, Morocco. e-mail: m.khouili@usms.ma

and pyrazoles.[19] Pyrazoles are part of heterocyclic structures most commonly used for the development of new drugs.[20, 21] Subsequently, David J. Babinski et *al.* have synthesized heterocyclic compounds containing the pyrazole skeleton, following a synthetic strategy based on pericyclic reactions for the preparation of pyrazoles 3,4,5-tri-substituted by a tandem catalytic cross-coupling/electrocyclization enol triflates and diazoacetates.[19-f]

Our investigation of this system is part of a current study on the synthesis of new pyrazole derivatives via 1,3-dipolar cycloaddition reaction. In this paper, we present the synthesis of 1-aryl-4,5-dihydro-1*H*-pyrazoles from eugenol, previously extracted of cloves, and different dipoles *N*-aryl-*C*-ethoxycarbonitrilimines.

II. Results and Discussion

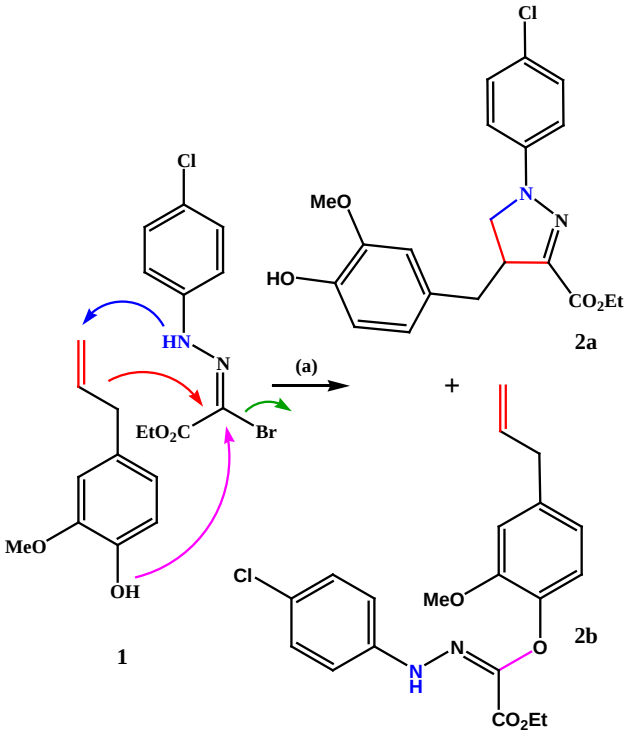
Clove (buds) was purchased commercially for extraction of essential oil eugenol. *Eugenia caryophyllata* buds were converted into powder by crushing and extracted by steam distillation of water for 4 hours.

The eugenol **1** will then be separated from the water by extraction with diethyl ether. The diethyl ether solution will then be dried and evaporated at a temperature not exceeding 40°C, to afford the eugenol oil. This oil was then purified by chromatography and identified by NMR ^{1}H and ^{13}C.[22]

Thereafter, new cycloaddition reactions with 4-allyl-2-methoxyphenol **1** as a dipolarophile were developed using the *N*-aryl-*C*-ethoxycarbonitrilimine derivative: the (*Z*)-ethyl 2-bromo-2-(2-(4-chlorophenyl)-hydrazono)acetate, who act as a dipole. The synthesis of the latter, was performed under conditions described by Hamilton et al.,[23] according to one reaction of diazonium chloride aniline with ethyl diazoacetate treated with a solution of bromine.

The 1,3-dipolar cycloaddition of 4-allyl-2-methoxy-phenol **1** with allyl group formed the corresponding pyrazole **2a**. Unfortunately, we have noted the presence of compound **2b** according *O*-alkylation reaction.[24] To avoid this side reaction, the 1,3-dipolar cycloaddition reaction was carried in different non-polar solvents.

The desired derivative **2a** (1-aryl-4,5-dihydro-1*H*-pyrazoles) was formed predominantly in relation to the derivative **2b** (*N*-aryl-*C*-ethoxy-carbonitrilimines). The latter product is derived from the condensation of phenol on the dipole *via* a nucleophilic substitution (*SN*) reaction (Scheme 1). The conversion rate, according to the results (Table 1), increases with the temperature without any degradation. We noted that the best conversion was obtained after 48 hours, when the reaction was carried out in refluxing toluene.

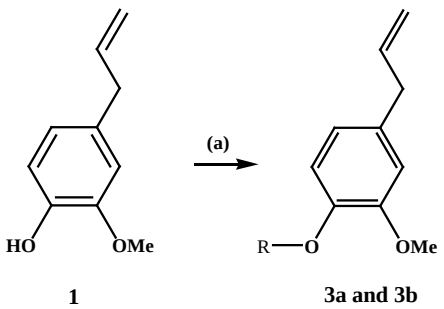


Scheme 1 : Reagents and conditions: (a) Et_3N, solvent, reflux, 48h

Table 1 : Reaction yields depending on solvent

Solvent	**2a** yield (%)	**2b** yield (%)
THF	6	11
Toluene	30	16
Xylene	20	1

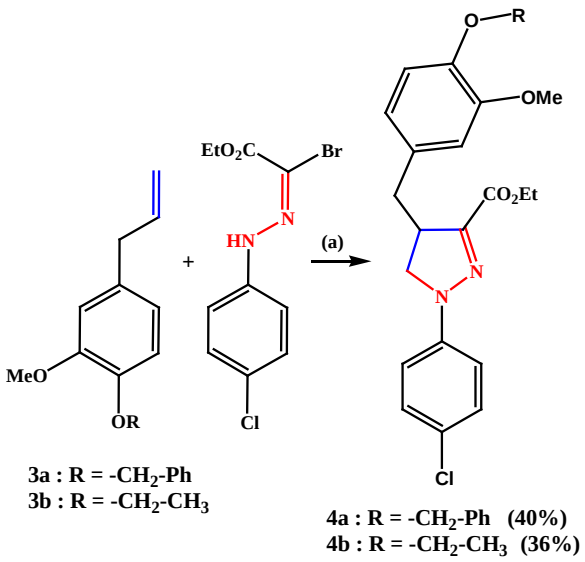
To control the dipolar cyclization reaction and avoid the formation of the ether-oxides, first we initially protected the phenol by a simple nucleophilic substitution reaction with various alkyl halides, which also allow us studying the donor effect of the system. The *SN* reaction was carried out with K_2CO_3 in acetone (Scheme 2).



Scheme 2 : Reagents and conditions: (a) RX, K_2CO_3, Acetone, reflux, 4 h

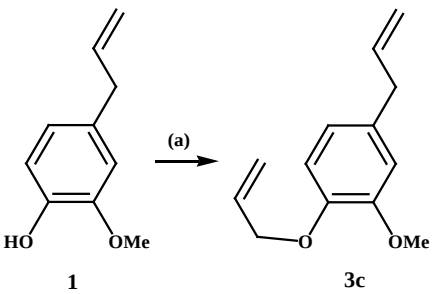
Table 2 : Synthesis, yields of compounds 3a and 3b

R	Compound	Yield (%)
Benzyl	**3a**	92
Ethyl	**3b**	90



Scheme 3 : Reagents and conditions: (a) Et_3N, Toluene, reflux, 48 h

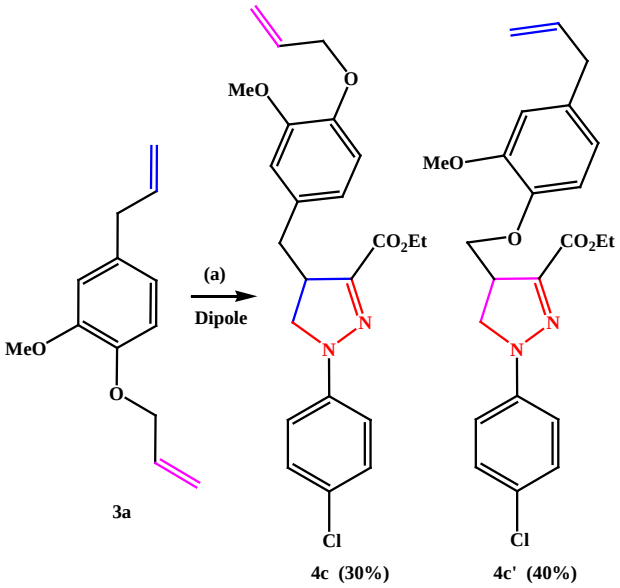
The desired compounds, **3a and 3b**, were isolated in good yields (Scheme 2, Table 2) and were subjected to condensation reaction with *N*-aryl-*C*-ethoxy-carbonitrilimine to afford only derivatives of 1-aryl-4,5-dihydro-1*H*-pyrazole, **4a** and **4b**, with average yields. This modest result is presumably due to the degradation of the *N*-aryl-*C*-ethoxycarbonitrilimine (Scheme 3).



Scheme 4 : Reagents and conditions: (a) allyl chloride, K_2CO_3, Acetone, reflux, 4 h

We envisioned the protection of the phenol with allyl group so as to examine the effect of the presence of two dipolarophile systems in our condensation reaction.

Thus, the eugenol **1** was engaged in *SN* reaction in presence of allyl chloride, according the conditions described for the preparation of **3a** and **3b**, to afford the compound **3c** in good yield (91%) (Scheme 4).The resulting allyl **3a** was heated in toluene at reflux for 48 hours in the presence of a dipole: the (*Z*)-ethyl 2-bromo-2-(2-(4-chlorophenyl)-hydrazono) acetate, to give two dipolar cycloadducts **4c** (30%) and **4c'** (40%). (Scheme 5) we noted that this 1,3-dipolar cycloaddition is not regioselective.



Scheme 5 : Dipole: (*Z*)-ethyl 2-bromo-2-(2-(4-chlorophenyl)-hydrazono) acetate; (a) Et_3N, Toluene, reflux, 48 h

III. Experimental Section

Melting points were taking for samples in capillary tubes with an electro-thermal apparatus and are uncorrected. ^1H NMR and ^{13}C NMR were recorded on a Bruker Avance DPX250 spectrometre (300 MHz ^1H, 75 MHz ^{13}C) using trimethylsilane as the internal standard, chemical shifts were reported in parts par million (ppm, δ units). Coupling constants were reported in units of hertz (Hz). Flash chromatography was performed on silica gel 60 (40–63 mesh). Thin layer chromatography (TLC) was carried out on Merck silica gel 60F254 precoated plates. Visualization was made with ultraviolet light. All organic solvents were distilled immediately prior to use.

a) General procedure for preparation of compound 2a and 2b

To a solution of 4-allyl-2-methoxyphenol 1 (1.22 mmol) in dry THF, toluene or xylene (10 mL); was added (3.4 mmol) the (*Z*)-ethyl 2-bromo-2-(2-(4-chlorophenyl)-hydrazono) acetate, and 0.52 mL of the triethylamine. The mixture was heated at solvent reflux for 48 hours. After cooling, the reaction mixture was extracted three times with dichloromethane. Organic phase was dried, evaporated and the crude was purified by column chromatography (eluent: ethyl acetate - hexane, 2: 8) to give **2a** and **2b**.

b) Ethyl-5-(4-hydroxy-3-methoxybenzyl)-1-(4 chlorophenyl)-4,5-dihydro-1H-pyrazole-3-carboxylate 2a

This compound was obtained as a yellow solid. Yields from: THF (6%), toluene (30%), xylene (20%). Mp: 124-126°C. ^{1}H NMR (300 MHz, $CDCl_3$): δ 7.23 (d, J = 9.1 Hz, 4H), 6.85 (d, J = 8.2 Hz, 1H), 6.65 (dd, J = 1.9 and 8.2 Hz,1H), 6.55 (d, J = 1.9 Hz ,1H), 5.55 (s, 1H), 4.82-4.55 (m, 1H), 4.3 (q, J = 7.2 Hz, 2H), 3.82 (s, 3H), 3.19-2.62 (m, 4H), 1.35 (t, J = 7 Hz, 3H). ^{13}C NMR (75 MHz, $CDCl_3$): δ 162.86, 146.75, 144.82, 140.96, 139.68, 129.39, 127.84, 126.36, 122.25, 116.03, 114.73, 112.02, 62.22, 61.35, 56.08, 36.97, 36.52, 14.45.

c) (4-Allyl-2-methoxy-phenoxy)-[(4-chloro-phenyl)-hydrazono]acetic acid ethyl ester 2b:

This compound was obtained as a yellow oil. Yields from: THF (11%), toluene (16%), xylene (1%). ^{1}H NMR (300MHz, $CDCl_3$): δ 9.80 (s, 1H), 7.40 (d, J = 8.4 Hz, 2H), 7.10 (d, J = 8.4 Hz, 2H), 6.80-6.61 (m, 3H), 5.94-5.76 (m, 1H), 5.15-5.01 (m, 2H), 4.22 (q, J = 7.1 Hz, 2H), 3.87 (s, 3H), 3.39-2.22 (m, 2H), 1.25 (t, J = 6.8 Hz, 3H). ^{13}C NMR (75 MHz, $CDCl_3$): 158.6, 154.0, 151.3, 141.2, 140.0, 136.5, 131.1, 129.7, 124.3, 122.8, 117.7, 116.8, 114.5, 61.4, 56.2, 48.4, 13.8.

d) General procedure for preparation of compounds 3a-c

To a solution of 4-allyl-2-methoxyphenol **1** (0.3 g, 1.7 mmol) in dry acetone (10 ml) was added K_2CO_3 (0.67 g, 4.88 mmol). The reaction was stirred in oil bath at 50-80°C. After 1 hour, 1.7 mmol of the corresponding haloalkyl groups or allyl chloride was added to a previous solution and the mixture was heated for 4 hours. After complete conversion of the starting material, the reaction was evaporated to dryness and the residue was purified by column chromatography (eluent: ethyl acetate - hexane, 1: 9) to give the corresponding compounds **3a-c**.

e) 4-Allyl-1-(benzyloxy)-2-methoxybenzene 3a

The compound was obtained as a yellow oil (92%). ^{1}H NMR (300 MHz, $CDCl_3$): δ 7.50-7.19 (m, 5H), 6.78-6.58 (m, 3H), 6.10-5.90 (m,1H), 5.07 (s, 2H), 5.20-5.00 (m, 2H), 3.80 (s, 3H), 3.40-3.20 (m, 2H). ^{13}C NMR (75 MHz, $CDCl_3$): δ 149.6, 146.5, 137.6, 137.4, 133.3, 128. 7, 127.7, 127.3, 120.46, 115.6, 114.3, 112.4, 71.2, 55.9, 39.8.

f) 4-Allyl-1-methoxy-2-ethoxybenzene 3b

The compound was obtained as a yellow oil (90%). ^{1}H NMR (300 MHz, $CDCl_3$): δ 6.60-6.70 (m, 3H), 5.90-5.80 (m, 1H), 5.00-4.90 (m, 2H), 4.00 (q, J = 6 Hz, 2H), 3.80 (s, 3H), 3.30-3.16 (m, 2H), 1.33 (t, J = 6 Hz, 3H, O-CH_2-CH). ^{13}C NMR (75 MHz, $CDCl_3$): δ 149.3, 146.7, 137.7, 132.6, 120.0, 115.5, 112.4, 112.2, 64.4, 55.8, 39.8, 14.9.

g) 4-Allyl-1-allyloxy-2-methoxybenzene 3c

The compound was obtained as a yellow oil (91%). ^{1}H NMR (300 MHz, $CDCl_3$): δ 6.90-6.70 (m, 3H), 6.20-5.90 (m, 2H), 5.48 (dd, J = 3.3 and 1.5 Hz, 1H), 5.4 (dd, J = 3.3 and 1.5 Hz, 1H), 5.36-5.24 (m, 2H), 5.15-5.05 (m, 2H), 4.69-4.51 (m, 2H), 3.85 (s, 3H), 3.38-3.26 (m, 2H). ^{13}C NMR (75 MHz, $CDCl_3$): 149.7, 146.8, 136.5, 133.6, 130.8, 122.4, 117.2, 116.4, 115.2, 114.1, 72.3, 56.2, 48.2.

h) General procedure for preparation of 4a-c

To a solution of each compounds **3a-c** in dry toluene (10 mL) was added 1.2 equivalents of *N*-aryl-*C*-ethoxycarbonitrilimine and appropriate quantity of triethylamine. The mixture was stirred at reflux for 48 hours. After cooling, the mixture was extracted with dichloromethane. Organic phase was evaporated and purified by column chromatography (eluent: ethyl acetate - hexane, 2: 8) to give the corresponding compounds.

i) Ethyl-5-(4-Benzyloxy)-3-methoxybenzyl)-1-(4-chlorophenyl)-4,5-dihdro-1H-pyrazole-3-caboxylate 4a

This compound was obtained as a yellow solid (40%). Mp: 102-104°C. ^{1}H NMR (300 MHz, $CDCl_3$): δ 7.28-7.13 (m, 5H), 7.00 (d, J = 8.1 Hz, 2H), 6.80 (d, J = 7.9 Hz, 2H), 6.60 (d, J = 7.8 Hz, 1H), 6.57-6.48 (m, 1H), 6.00 (d, J = 7.8 Hz, 1H), 5.20 (s, 2H), 4.87-4.75 (m, 1H), 4.20 (q, J = 7.3 Hz, 2H), 3.75 (s, 3H), 3.40-3.20 (m, 2H), 1.40-1.60 (m, 2H), 1.10 (t, J = 7 Hz, 3H). ^{13}C NMR (75 MHz, $CDCl_3$): δ 172, 160, 150, 146, 142, 140, 136, 132, 129, 127, 120, 119, 117, 111, 65, 63, 56, 40, 15, 13.

j) Ethyl-5-(4-ethoxy-3-methoxybenzyl)-1-(4-chloro-phenyl)-4,5-dihydro-1H-pyrazole-3-carboxylate 4b

This compound was obtained as a yellow solid (36%). Mp: 124-126°C. ^{1}H NMR (300 MHz, $CDCl_3$): δ 7.33 (d, J = 9.1 Hz, 2H), 7.2 (d, J = 9.1 Hz, 2H), 6.80 (d, J = 8.7 Hz, 1H), 6.68-6.56 (m, 1H), 5.99 (d, J = 8.7 Hz, 1H), 5.07-4.92 (m, 1H), 4.18 (q, J = 6.9 Hz, 2H), 4.00 (q, J = 7.2 Hz, 2H), 3.8 (s, 3H), 3.36-3.25 (m, 2H), 1.4-1.6 (d, J = 7.2 Hz, 2H), 1.44 (t, J = 7.2 Hz, 3H), 1.10 (t, J = 6.9 Hz, 3H). ^{13}C NMR (75 MHz, $CDCl_3$): δ 158.9, 149, 146, 142, , 136, 132, 130, 129, 120, 119, 115, 113, 112, 64, 63, 55, 40, 14.8, 13.6.

k) Ethyl-5-(4-(allyloxy)-3-methoxybenzyl)-1-(4-chlorophenyl)-4,5-dihydro-1H-pyrazole-3-carboxylate 4c

This compound was obtained as a yellow oil (30%). ^{1}H NMR (300 MHz, $CDCl_3$): δ 7.3 (d, J = 9.1 Hz, 2H), 7.2 (d, J = 9.1Hz, 2H), 6.82 (d, J = 8.1Hz, 1H), 6.68 (dd, J = 2.1 and 8.1 Hz, 1H), 6.6 (d, J = 2.1 Hz, 1H), 6.18-6.02 (m, 1H), 5.4 (dd, J = 1.5 and 17.4 Hz, 1H), 5.3 140 (dd, J = 1.5 and 10.2 Hz, 1H), 4.80-4.70 (m, 1H), 4.65-4.58 (m, 2H), 4.32 (q, J = 7.2, 2H), 3.85 (s, 3H), 3.22-2.65 (m, 4H), 1.38 (t, J = 7 Hz, 3H); ^{13}C NMR (75 MHz, $CDCl_3$): δ 163.08, 149.93, 147.46, 141.18, 139.9, 133.65, 129.18, 126.6, 121.81, 118.34, 116.26, 114.05, 113.38, 70.29, 62.34, 61.56, 56.37, 37.14, 36.79, 14.67.

l) Ethyl-5-((4-allyl-2-methoxyphenoxy)methyl)-1-(4-chlorophenyl)-4,5-dihydro-1H-pyrazole-3-carbox-ylate 4c'

This compound was obtained as a yellow oil (40%). ^{1}H NMR (300 MHz, $CDCl_3$): δ 7.25 (d, *J* = 9.6Hz, 2H), 7.2 (d, *J* = 9.6 Hz, 2H), 6.75-6.65 (m, 3H), 6.2-5.88 (m, 1H), 5.12-5.05 (m, 2H), 4.95-4.85 (m, 1H), 4.38 (q, *J* = 7.2 Hz, 2H), 4.86-3.60 (m, 2H), 3.82 (s, 1H), 3.42-3.30 (m, 4H), 1.4 (t, *J* = 7 Hz, 3H); ^{13}C NMR (75 MHz, $CDCl_3$): δ 162.91, 150.26, 146.29, 141.37, 140.61, 135.02, 129.64, 126.66, 120.93, 116.15, 115.40, 113.08, 68.79, 61.62, 60.54, 56.18, 40.13, 36.29, 14.67.

IV. Extraction of Eugenol

Commercially available plant material (buds) was purchased for the essential oil extraction. The buds of Eugenia caryophyllata were extracted by steam distillation for 4h. The distillation was extracted with diethyl ether, dehydrated with anhydrous sodium sulfate and solvent removed and by evaporation using a rotator evaporator at 40°C. The residual oil obtained was used for chemical analysis, further purification and biological assays. The extracted oil was purified by normal phase chromatography on silica gel with the eluent of n-hexane ; ethyl acetate (10 : 1). The eluate was collected in 30 fractions of 30ml, Fractions collected were evaporated and of the residual obtained is colorless oil was identified by ^{1}H-NMR (250 MHz, $CDCl_3$), ^{13}C-NMR (62,5MHz, $CDCl_3$).

V. Conclusion

New structure pyrazole derivatives have been prepared by 1,3-dipolar cycloaddition with eugenol as the starting material. The latter was extracted from cloves by steam distillation. The cycloaddition reaction with the compound (*Z*)-ethyl 2-bromo-2-(2-(4-chlorophenyl)-hydrazono) acetates, used as a dipole, was carried out with modest yields. In the case of the presence of dipolarophile: 4-allyl-1 (allyloxy)-2-methoxybenzene, the reaction proceeded with full conversion and 70%, with the formation of the two possible regioisomeric products, are: ethyl 4-(4-(allyloxy)-3-methoxybenzyl)-1-(4-chlorophenyl)-4,5-dihydro-1*H*-pyrazole-3-carboxylate (**4c**) and ethyl 4- ((4-allyl-2-methoxyphenoxy)methyl)-1-(4-chlorophenyl)-4,5-dihydro-1*H*-pyrazole-3-carboxylate (**4c'**). The two regioisomeric products were obtained in good yields. This method was used to prepare a variety of substituted 1-(4-aryl)-4,5-dihydro-1*H*-pyrazole. All synthesized compounds were purified and identified by conventional spectroscopic methods.

Synthesis and Applications of Pyrimidinethiones

Mohamed Abdel-Megid [α σ], K. M. Elmahdy [α] & Aymn E. Rashad [σ ρ]

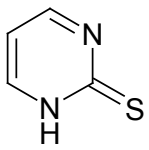
Abstract- One important class of pyrimidine is pyrimidinethione, which is also well known as mercapto or thioxopyrimidine compounds. This review deals with the synthesis and applicaions of pyrimidinethiones.

Keywords: pyrimidinethiones, therapeutic applications.

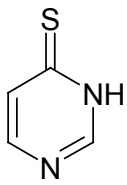
I. Introduction

Pyrimidine derivatives have been very well known in medicinal chemistry for their therapeutic applications. One possible reason for their activity is the presence of a pyrimidine base in thymine, cytosine and uracil, which are essential building blocks of nucleic acids, DNA and RNA. Pyrimidinethione derivatives have attracted substantial interest of synthetic-biochemists.[1]

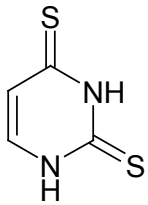
Pyrimidinethiones exist in three possible structures, depending on the position of thione group. There are 2-pyrimidinethione (I), 4-pyrimidinethione (II) and 2,4-pyrimidinethione (III).



I

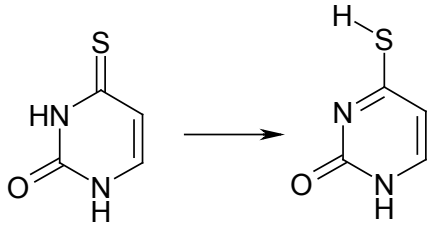


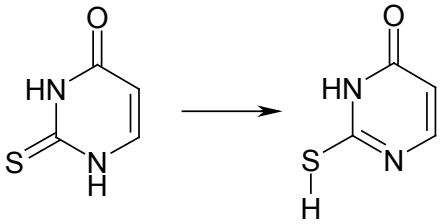
II



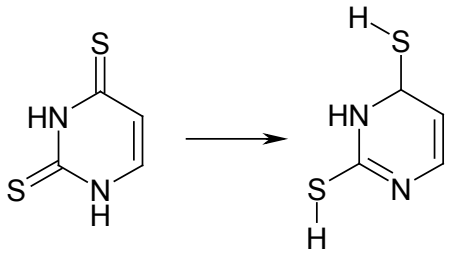
III

It was found that, upon UV irradiation of monomers of thione compounds isolated in low-temperature inert gas matrices, a proton from the N–H group was shifted to the C=S group placed in the α-position. That led to the conversion of the thione form of studied compounds into the thiol tautomer. Very recently, analogous unimolecular thione→thiol photo-tautomeric transformations were found to occur also for matrix-isolated monomers of 4-thiouracil and 2-thiouracil. For these species, the photoprocesses involving transfer of protons from the N–H groups to the thiocarbonyl (C=S) groups dominated strongly over the transfer of protons to the carbonyl (C=O) groups[2].





For 2,4-dithiouracil, the presence of two N–H and two C=S groups in a molecule opens the gate for more than one, simple pathway of the UV-induced thione→thiol phototautomeric reaction. The thiol–thione tautomers of the compound could be expected as products of a single-proton-transfer photoreaction and the dithiol tautomer can be photogenerated in a double-proton-transfer process. the dithiol tautomer of 2,4-dithio- uracil, generated by the transfer of both N–H protons to the thiocarbonyl C=S groups[2].



The crystal structure of 2,4-dithiouracil has been determined. The dimers of 2,4-dithiouracil are present in the structure. Every molecule is connected with two neighbouring molecules by means of two kinds of pair coupling hydrogen bonds. At the same time each molecule is a donor and an acceptor in four hydrogen bonds of the N–H·· ·S type[3].

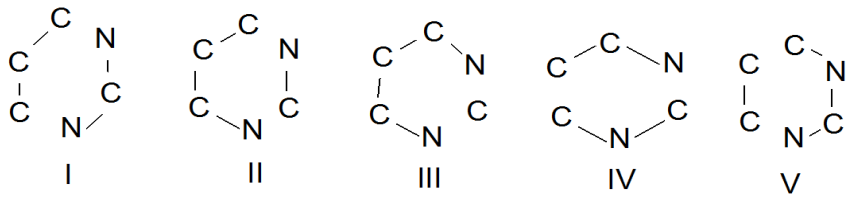
II. Synthesis of Pyrimidinethiones

Pyrimidinethiones were generally prepared by five types of ring synthesis (I, II, III, IV and V) according to the nature of the fragments which combine together to form pyrimidinethione nucleus.



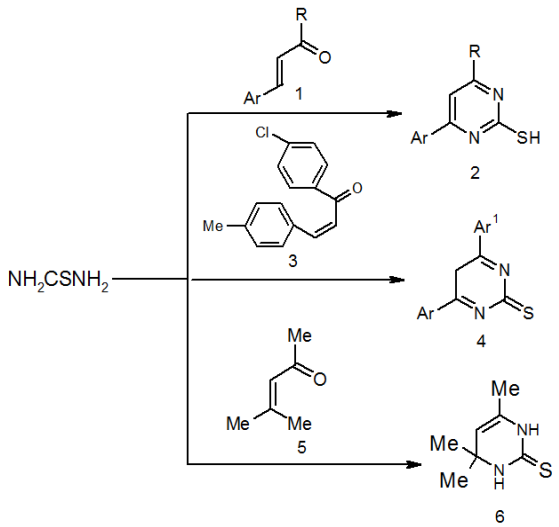
a) Synthesis from C-C-C and N-C-N fragments

i. *From thiourea and its derivatives*

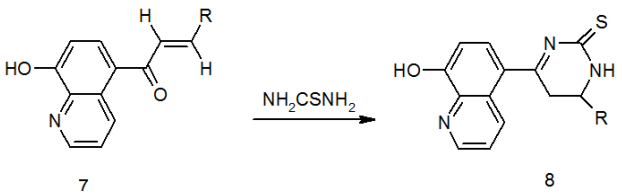
Thiourea and its derivatives considered as good synthons for the synthesis of 2-thiopyrimidine derivatives *via* their interaction with enones, 1,3-dicarbonyl-compounds, acetylenic compounds, arylidene, ethoxymethylene derivatives, acrylonitriles and enamines.

a. *With enone derivatives*

Reaction of thiourea with ethylenic ketone 1[4], benzoylethylene derivative 3[5] and mesityl oxide (5)[6]afforded pyrimidine derivatives 2, 4 and 6, respectively.

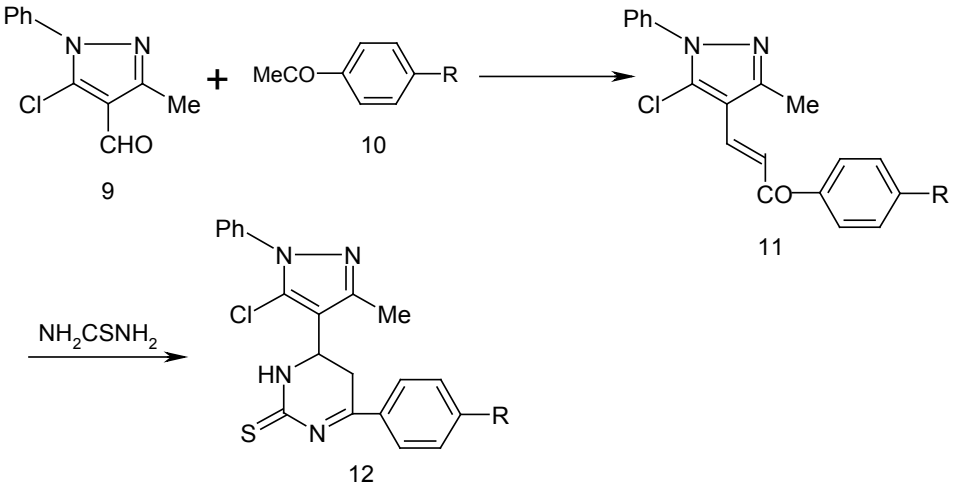


4-(8-Hydroxyquinolin-5-yl)-6-substituted-1,2,5,6-tetra-hydropyrimidine-2-thiones 8 were prepared from the reaction of compound 7 with thiourea in the presence of sodium ethoxide[7].

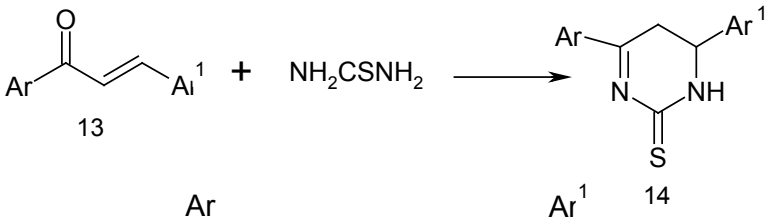


R = C_6H_5, 4-MeO-C_6H_4, 4-Cl-C_6H_4, 2-furyl, C_3H_7 n

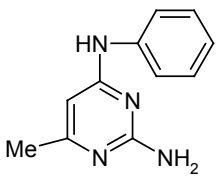
On the other hand, 5-chloro-4-formyl-3-methyl-1-phenylpyrazole (9) was condensed with 10 to form an α,β-unsaturated ketonic intermediates 11, which were then cyclocondensed with thiourea to give pyrimidine-2-thione derivatives 12[8].



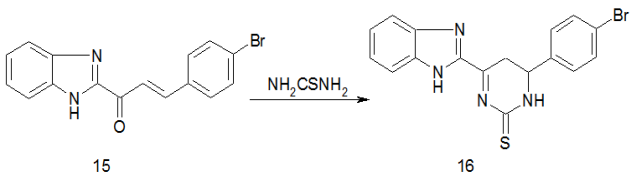
Reaction of chalcons 13 with thiourea afforded pyrimidine-2-thione derivatives 14[9-13].



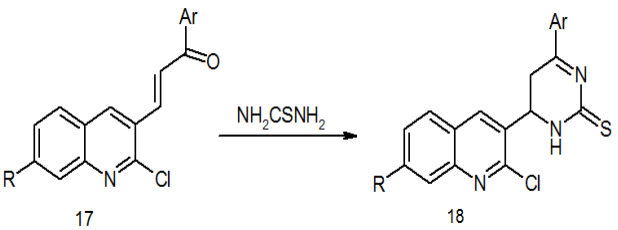
Ar	Ar^1
a, 2,4-$(Me)_2C_6H_3$	, 4-ClC_6H_4
b, 3,4-$(Me)_2C_6H_3$	, 4-ClC_6H_4
c, 2-OMe-4-MeC_6H_3	, 4-ClC_6H_4
d, C_6H_3-CH_2-C_6H_4	, C_6H_5
e, C_6H_5	
f, 2-ClC_6H_4	
g, 2-$MeOC_6H_4$	
h, 2,4-$(MeO)_2C_6H_3$	
i, 4-ClC_6H_4	
j, 3-$O_2NC_6H_4$	



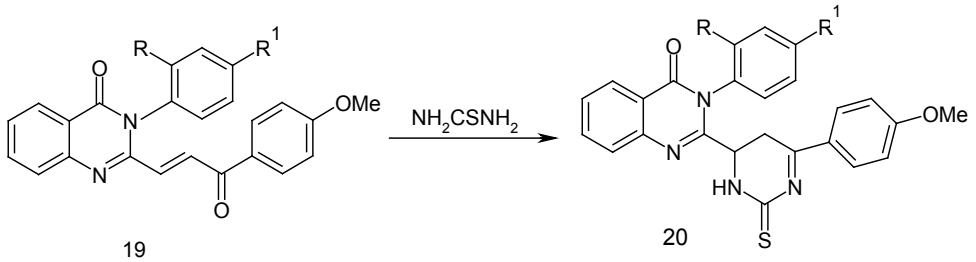
4-[1-H-benzimidazol-2-yl]-6-(4-bromophenyl)-5,6-dihydropyrimidine-2(1H)thione (16) was prepared through cyclocondensation of 1-(benzimidazol-2-yl]-3-(4-bromophenyl)-2-propen-1-one (15) with thiourea[14].



Interaction of 3-(1-aryl-1-oxoprop2-2en-3-yl)-7-substituted -2-chloroquinoline (17) with thiourea in the presence of ethanolic sodium ethoxide afforded 4-aryl-6-(2-chloro-7-substituted-quinolin-3-yl)-5,6-dihydroprimidine-2(3H)thione (18)[15] .



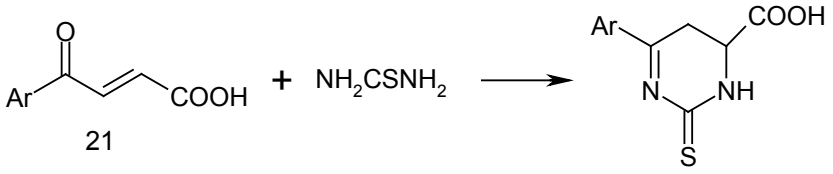
Anisoyl vinylaryl quinazolines 19 was reacted with thiourea to give pyrimidine-2-thione derivatives 20[16,17].



19 20

R = Me, R1 = H; R = H, R1 = NH2

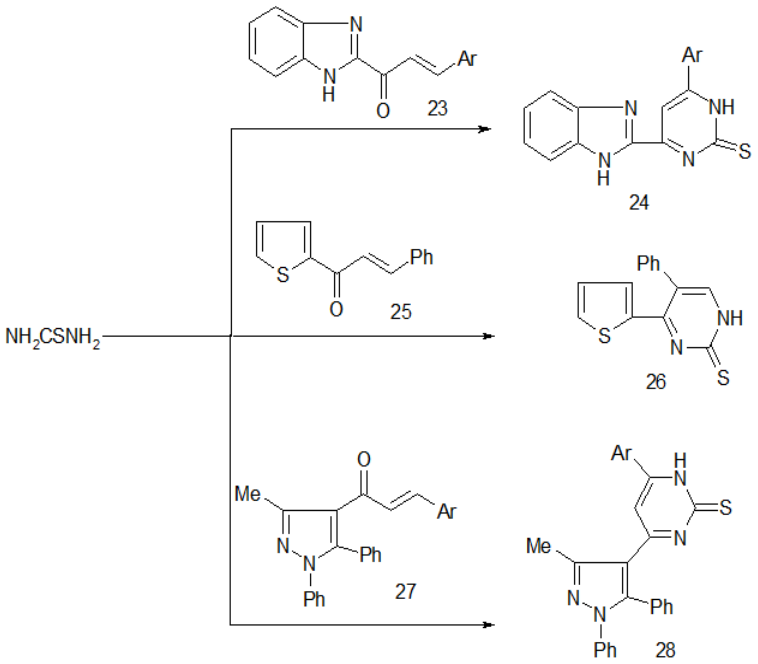
Reaction of β-aroylacrylic acids 21 with thiourea in the presence of ethanolic sodium ethoxide afforded the corresponding 6-aryl-4-carboxy-4,5-dihydropyrimidine-2(1H)-thiones 22[18].



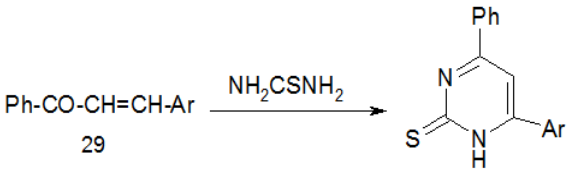
21 22

Ar = C_6H_5, 3,4-$Cl_2C_6H_3$ 2,5-C_6H_3(Me)(Cl)

Reaction of thiourea with 2-cinnamoyl benzimidazole (23), benzal-α-acetothienone (25) and 4-cinnamoyl-3-methyl-1,5-diphenylpyrazole (27) afforded pyrimidine-2-thiones 24, 26 and 28[19, 20, 21], respectively.



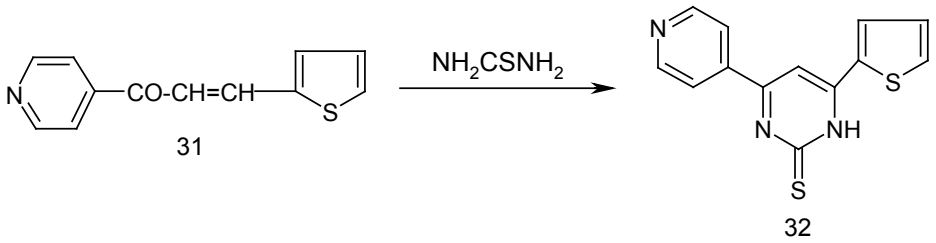
4,6-Disubstituted-2(1H)-pyrimidinethione 30[22] has been prepared by treatment of 4-nitrobenzylidene-acetophenone (29) with thiourea.



29 30

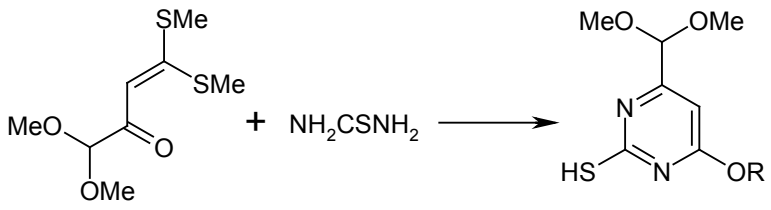
Ar = 4 -$O_2NC_6H_4$

On the other hand, the chalcone 31 was reacted with thiourea to afford pyrimidinethione 32[23].



31 32

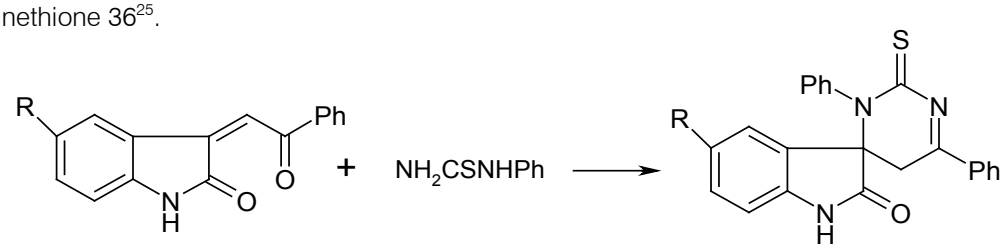
Treatment of α-oxoketene dithioacetal 33 with thiourea in the presence of sodium methoxide furnished the respective 6-alkoxy-4-[bis(methoxy)methyl]-2-mercaptopyrimidines (34) [24].



33 34

R = Me, Et

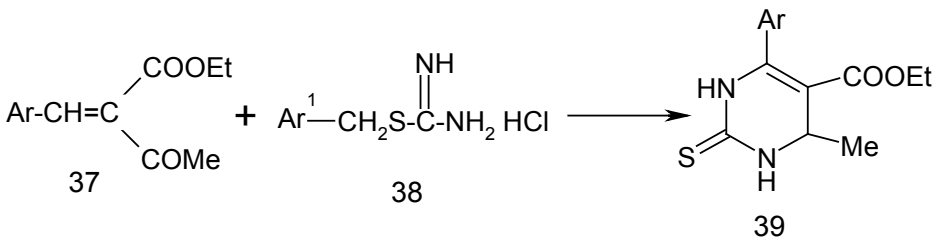
Condensation of compound 35 with phenylthiourea in ethanol under microwave irradiation yielded spiroindol pyrimidinethione 36[25].



35 36

R = Cl, Me

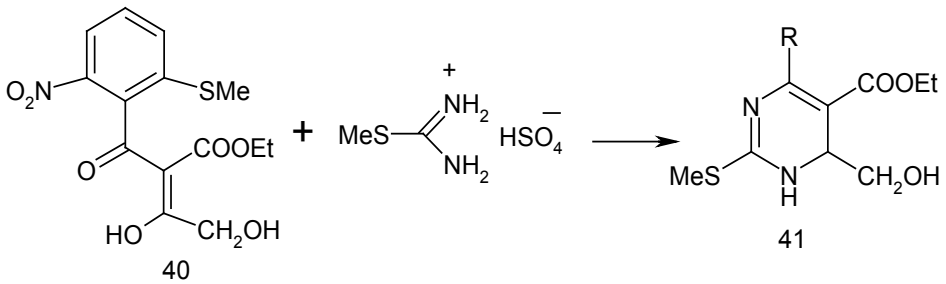
Treatment of *p*-nitrobenzylidine ethyl acetoacetate (37) with *p*-methoxybenzylthioamidine hydrochloride (38) gave pyrimidinethione 39[26].



37 38 39

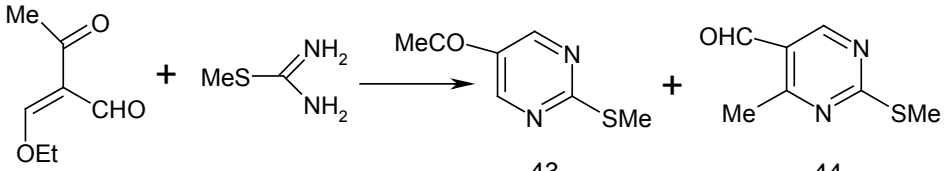
Ar = 4- $O_2NC_6H_4$; Ar^1 = 4- $MeOC_6H_4$

Reaction of ethyl 4-(acetyloxy)-2-[2-(methylthio)-3-nitrophenyl methylene-3-oxobutanoate (40) and 2-methyl-2-thio pseudourea sulphate in the presence of sodium acetate afforded ethyl (hydroxymethyl) pyrimidine carboxylate derivative 41[27,28].



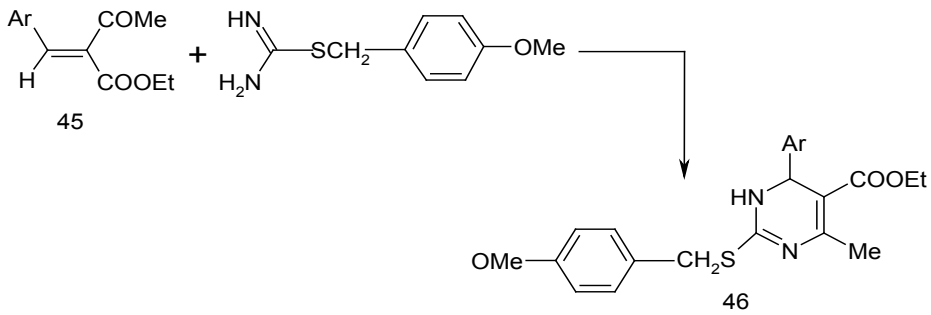
40 41

Condensation of 4-ethoxy-3-formyl-3-buten-2-one (42) with methyl thiourea afforded a mixture of 5-acetyl-2-methylthiopyrimidine (43) and 5-formyl-4-methyl-2-methylthiopyrimidine (44)[29,30].



42 43 44

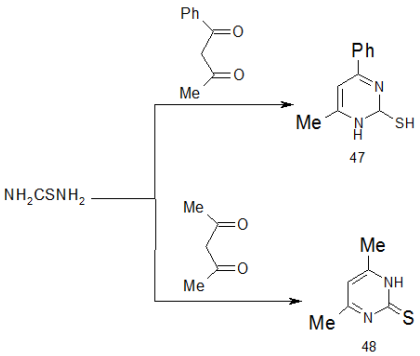
Treatment of α-acetylcinnamic esters 45 with S-(p-methoxybenzyl) thiourea in the presence of sodium hydroxide yielded 4-methyl-5-pyrimidine carboxylic acid esters 46[31].



45 46

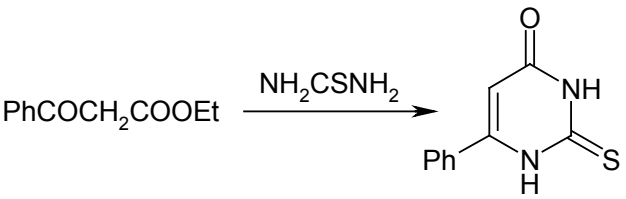
b. *With Dicarbonyl Compounds*

Reaction of thiourea with benzoylacetone[32] and acetylacetone[33,34,35] gave pyrimidine derivatives 47 and 48, respectively.



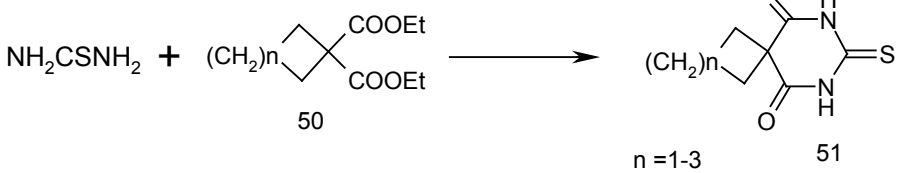
47 48

Reaction of ethyl benzoylacetate and thiourea in ethanolic sodium acetate afforded pyrimidinethione 49[36].



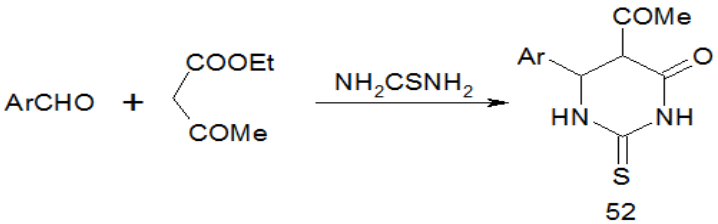
49

Interaction of thiourea with 1,1-cycloalkane-dicarboxylic acid diethyl esters (50) gave spiropyrimidinethione 51[37].



50 n =1-3 51

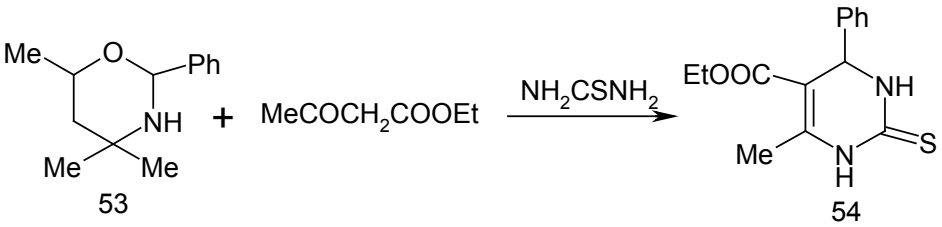
Ternary condensation of aromatic aldehyde, ethyl acetoacetate and thiourea produced tetrahydropyrimidine-2-thiones 52[38].



52

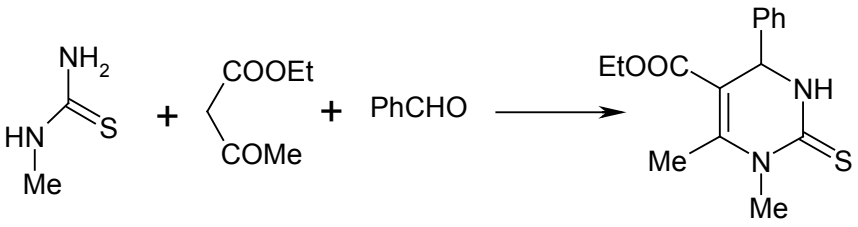
Ar = 4 -F-C_6H_4; 2,4 -F_2-C_6H_3

Reaction of oxazinane 53 with a mixture of ethyl acetoacetate and thiourea in the presence of anhydrous acetonitrile and trifluoroacetic acid furnished ethyl 6-methyl-4-phenyl-1,2,3,4-tetrahydropyrimidine-2-thione-5-carboxylate 54[39].



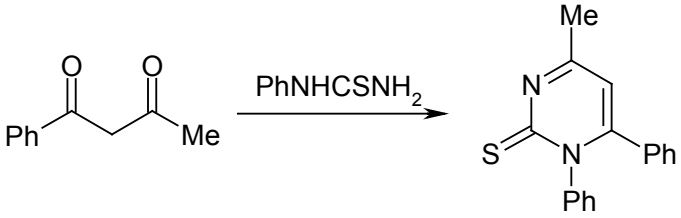
53 54

1,6-Dimethyl-4-phenyl-2-thioxo-3,4-dihydropyrimidine-5-carboxylic acid ethyl ester (55) was synthesized by condensation of ethyl acetoacetate, benzaldehyde and N-methylthiourea[40].



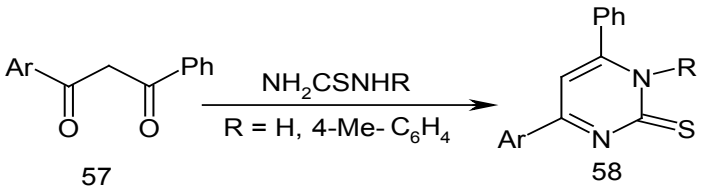
55

Further, 1-phenyl-1,3-butanedione was reacted with *N*-phenylthiourea in the presence of hydrochloric acid to produce 1,6-diphenyl-4-methyl-2-pyrimidinethione (56)[41].

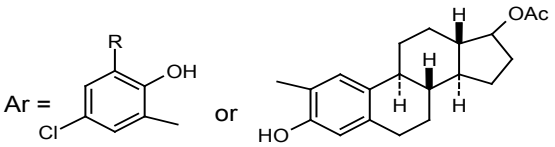


56

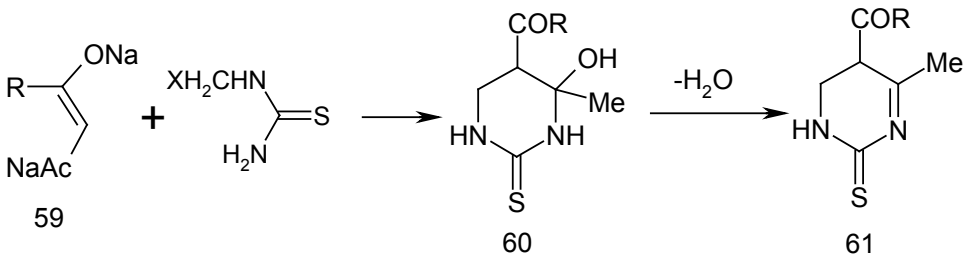
Diaroylmethane derivatives 78 were treated with thiourea to give pyrimidine-2-thione derivatives 79[18,42].



57 58

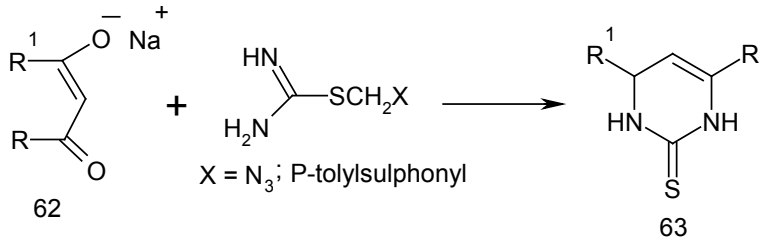


Heterocyclization of thiourea derivative with the enolate of 1,3-dicarbonyl derivative 59 yielded hydroxyhexahydropyrimidines 60 which underwent dehydration to afford tetrahydropyrimidines 61[43].



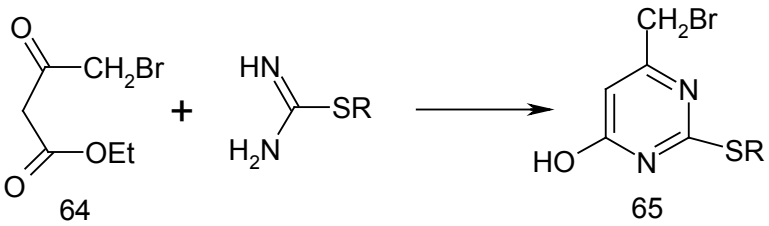
59 60 61

Reaction of 1,3-dicarbonyl compound 62 with (azidomethyl) thiourea or [(*p*-tolylsulphonyl)methyl] thiourea gave pyrimidine derivative 63[44].



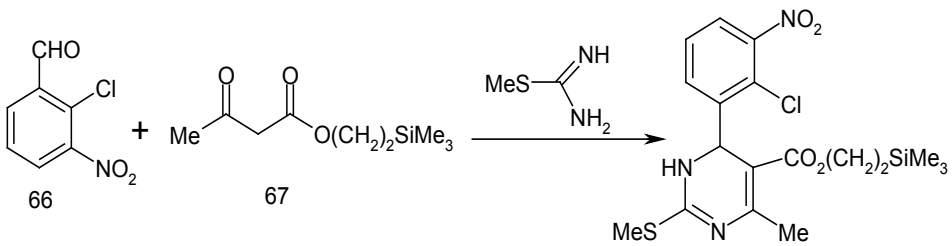
62 63

Condensation of ethyl γ-bromoacetoacetate 64 with S-methyl or S-benzyl isothiourea gave pyrimidine derivatives 65[45].



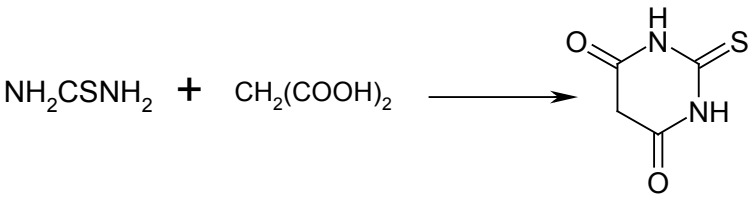
64 65

Condensation of 2-chloro-3-nitrobenzaldehyde 66 with acetoacetate derivative 67 and methyl thiourea yielded 3,4-dihydropyrimidine carboxylate 68[46].



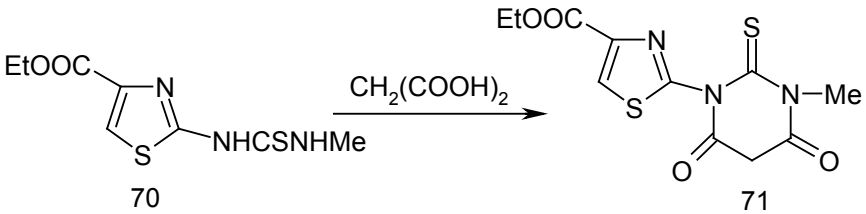
66 67 68

Dioxopyrimidinethione 69[47-49] was obtained by the reaction of thiourea with malonic acid.



69

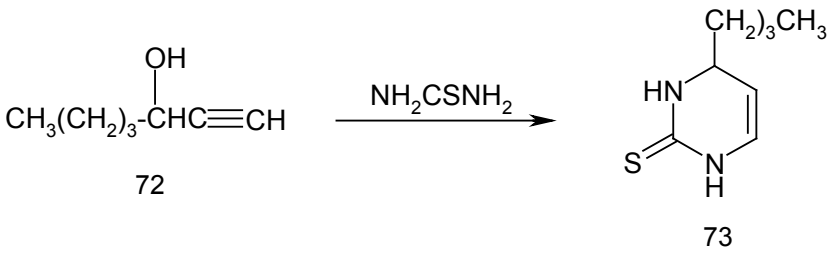
Treatment of thioazolyl thiourea derivative 70 with malonic acid, in the presence of acetyl chloride, gave pyrimidine derivative 71[50].



70 71

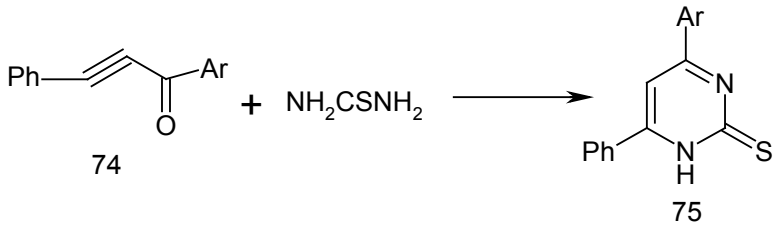
c. *With Acetylenic Compounds*

Cyclocondensation of acetylene derivative 72 with thiourea produce pyrimidinethione 73[51].



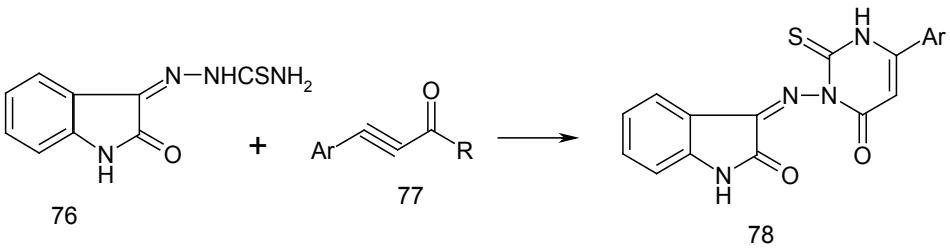
72 73

Reaction of aroylphenylacetylenes 74 with thiourea in the presence of ethanolic sodium ethoxide afforded 4-aryl-6-phenylpyrimidine-2(1H)thiones 75[52].



74 75

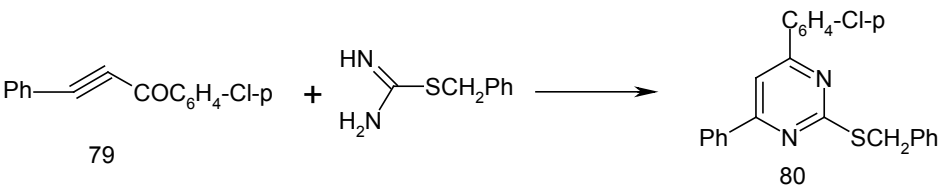
Treatment of isatin-3-thiosemicarbazone (76) with acetylenic ester 77 in the presence of ethanolic sodium ethoxide yielded 3-[2-oxo-2H,3H-benzo(b) pyrrolidine-3-iminyl]-4-oxo-2-thioxo-1,2,4-trihydropyrimidine (78)[53, 54].



76 77 78

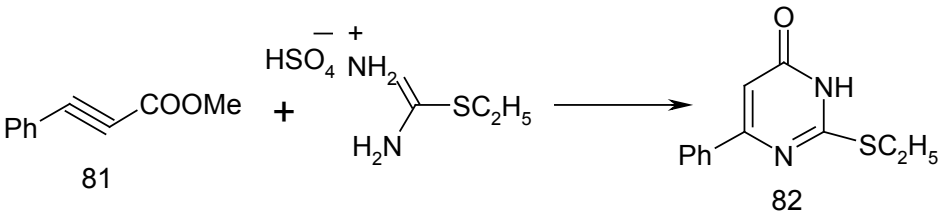
R = OMe, OEt ; Ar = 4-Cl- C_6H_4 , 4-MeO- C_6H_4

S-benzylisothiourea hydrochloride was reacted with p-chlorobenzoylphenylacetylene (79) to give 2-benzylthio-4-(*p*- chlorophenyl)-6-phenylPyrimidine(80)[4].



79 80

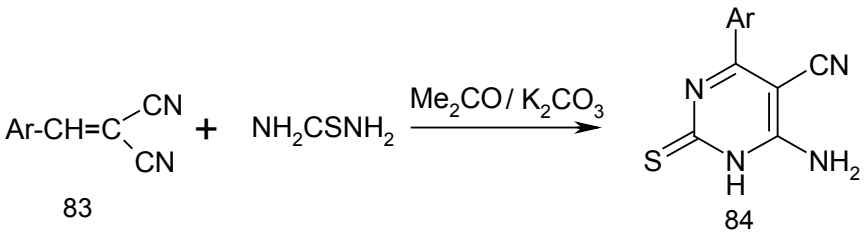
When S-ethylisothiourea sulphate was allowed to react with methyl propiolate 81, in the presence of sodium acetate, gave 1,6-dihydro-2-ethylthio-4-phenyl- pyrimidin-6-one (82)[55].



81 82

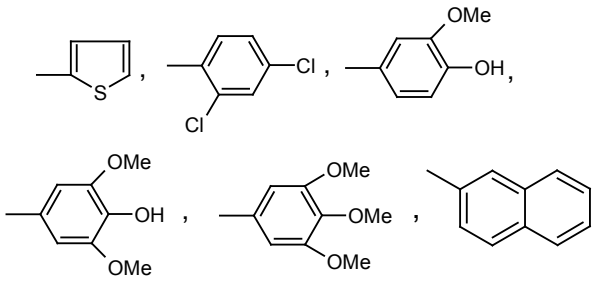
d. *With Arylidenes*

4-Amino-6-aryl-5-cyanopyrimidine-2(3H)-thiones 84[56,57] were obtained by the reaction of β-arylidene malononitrile 83 with thiourea in the presence of anhydrous potassium carbonate.

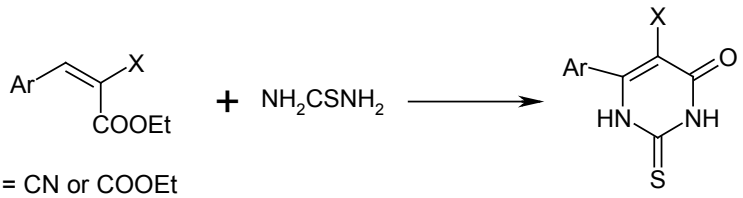


83 84

Ar =



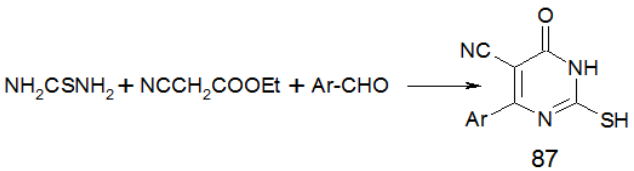
4-Oxo-2-thioxopyrimidine derivatives 86 were obtained by the reaction of arylidines 85[58,59] with thiourea.



X = CN or COOEt

85 86

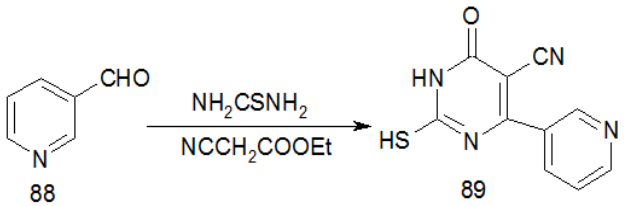
2-Mercapto-4-aryl-5-cyanopyrimidin-6(1H) ones (87)[60,61] were obtained by reaction of ethyl cyanoacetate, thiourea with aromatic aldehydes in ethanolic sodium ethoxide.



87

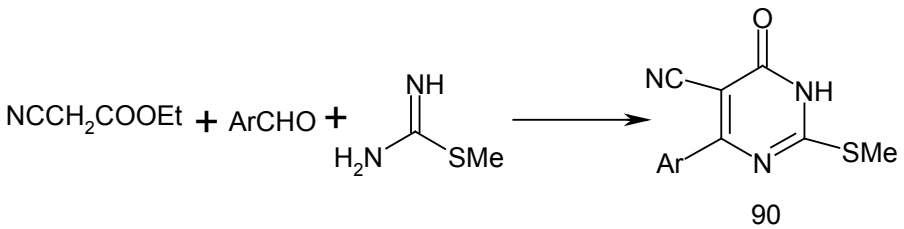
Ar = 2, 4-$Cl_2C_6H_3$, 4-$(Me)_2N$-C_6H_4

5-Cyano-2-mercapto-6(1H)pyrimidinone derivative 89[62] was obtained by reaction of 3-pyridine carboxyaldehyde (88), thiourea and ethyl cyanoacatate.



88 89

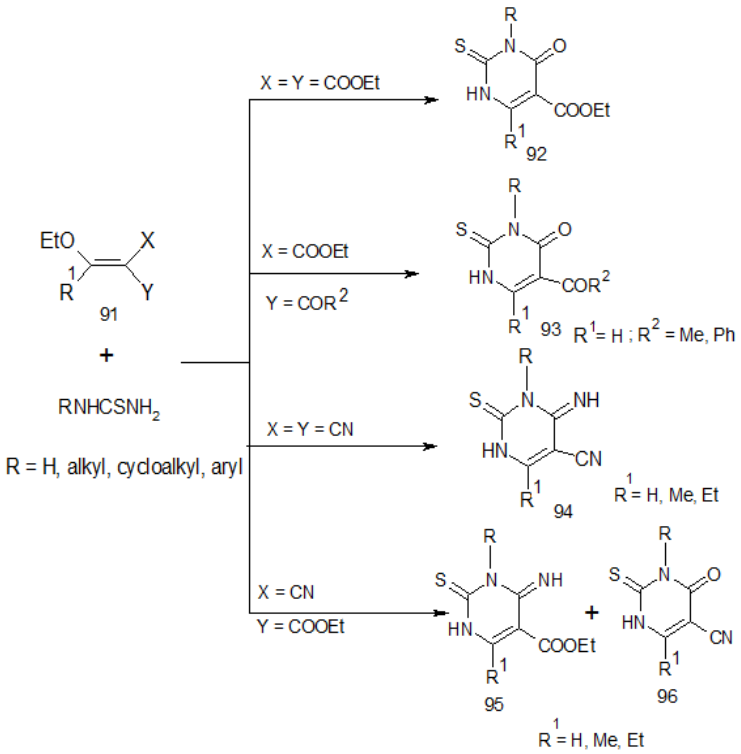
Reaction of ethyl cyanoacetate with aromatic aldehyde and methyl thiourea gave the corresponding 4-aryl-5-cyano-2-methylthio-6-oxopyrimidine derivative 90[63].



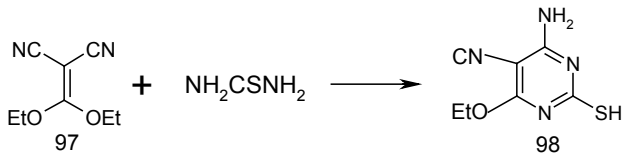
90

e. *With Ethoxymethylene Compounds*

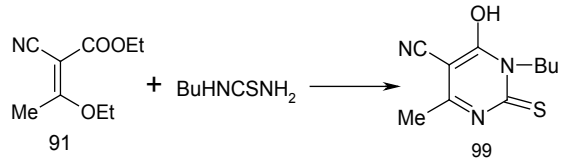
Reaction of ethoxymethylene derivatives 91 with thiourea derivatives gave pyrimidine derivatives 92, 93, 94, 95 and 96 respectively[64].



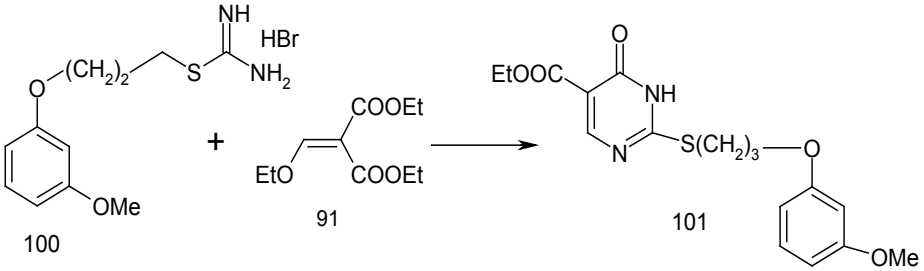
Reaction of diethoxymethylenemalononitrile (97) with thiourea afforded pyrimidine derivative 98[65,66].



Butyl-5-cyano-6-hydroxy-4-methyl-2-thiopyrimidine (99)[67] was synthesized by the reaction of ethyl α-ethoxyethylidinecyanoacetate (91) with *N*-butyl-thiourea.

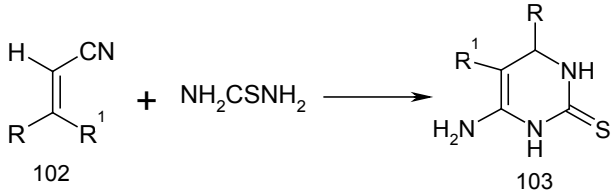


Treatment of S-[3-(methoxyphenoxy)propyl] isothiourea hydrobromide (100) with ethoxymethylidinemalonate (91) gave pyrimidine derivatives 101[68].

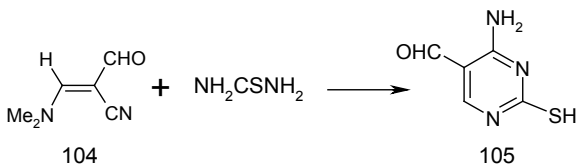


f. *With Acrylonitrile Derivatives*

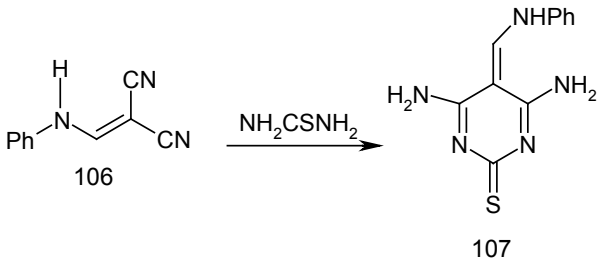
Reaction of cyanoolefine 102 with thiourea gave the aminopyrimidine derivatives 103[69-71].



Interaction of acrylonitrile derivative 104 with thiourea yielded thiopyrimidine 105[72].

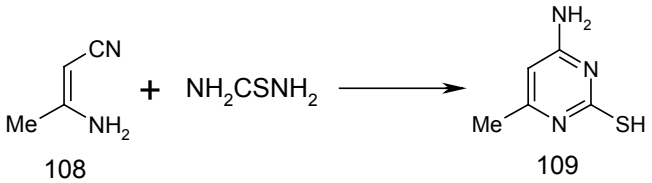


Pyrimidine-2-thione derivatives 107 was prepared via interaction between β-enaminonitrile 106 with thiourea[73,74].

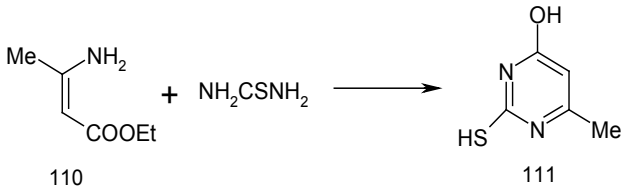


g. *With Enamine derivatives*

Reaction of 2-amino-1-cyanopropene (108) with thiourea gave thiopyrimidine 109[65].

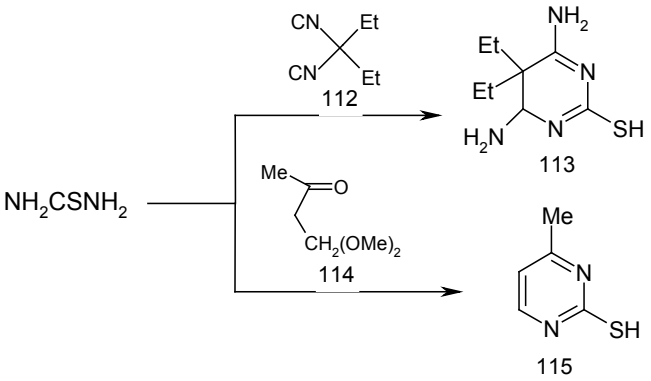


Also, interaction of 3-aminocrotonate (110) with thiourea gave thioxo-pyrimidine 111[75].

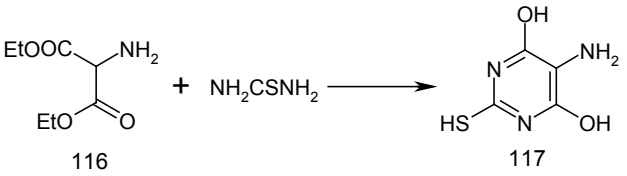


h. *With Different Compounds*

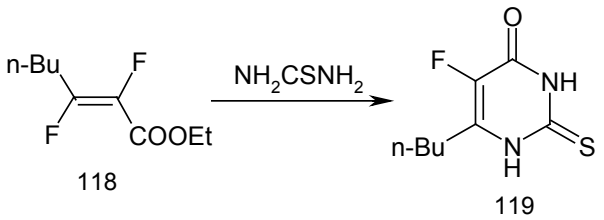
Reaction of thiourea with diethylmalononitrile (112)[69]and ketone derivative 114 afforded pyrimidine derivative 113 and 115 respectively.



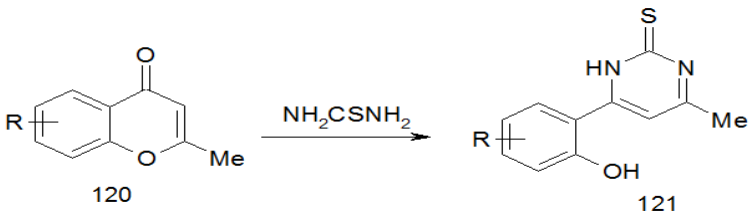
The condensation of thiourea with diethyl 2-aminomalonate 116 afforded 5-amino-2-mercapto-pyrimidine-4,6-diol (117)[76].



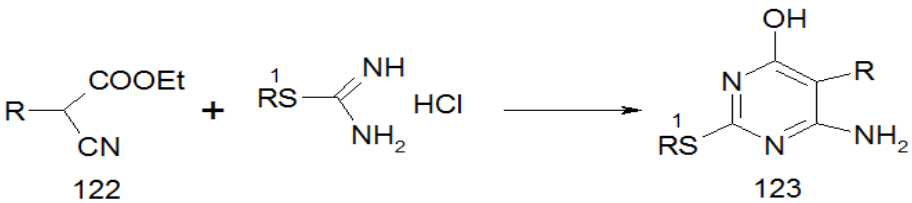
Reaction of ethyl 3-*n*-butyl-*trans*-2,3-difluoro-2-acrylate (118) with thiourea afforded the corresponding 6-*n*-butyl-5-fluoro-2-thiouracil (119)[77].



Condensation of 2-methylchromones 120 with thiourea afforded 4-methyl-6-substituted-phenyl-(1H) pyrimidinethiones 121[78].

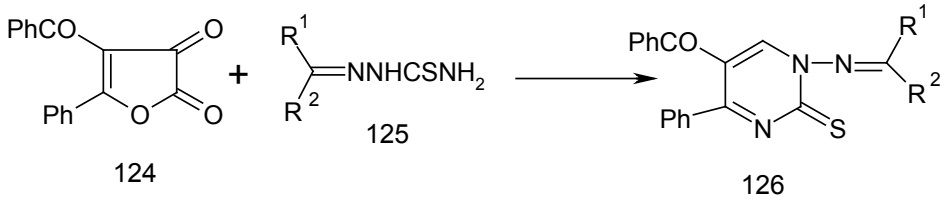


Reaction of ethyl cyanoacetate derivatives 122 with S-alkyl thiourea derivatives yielded pyrimidine derivatives 123[79].



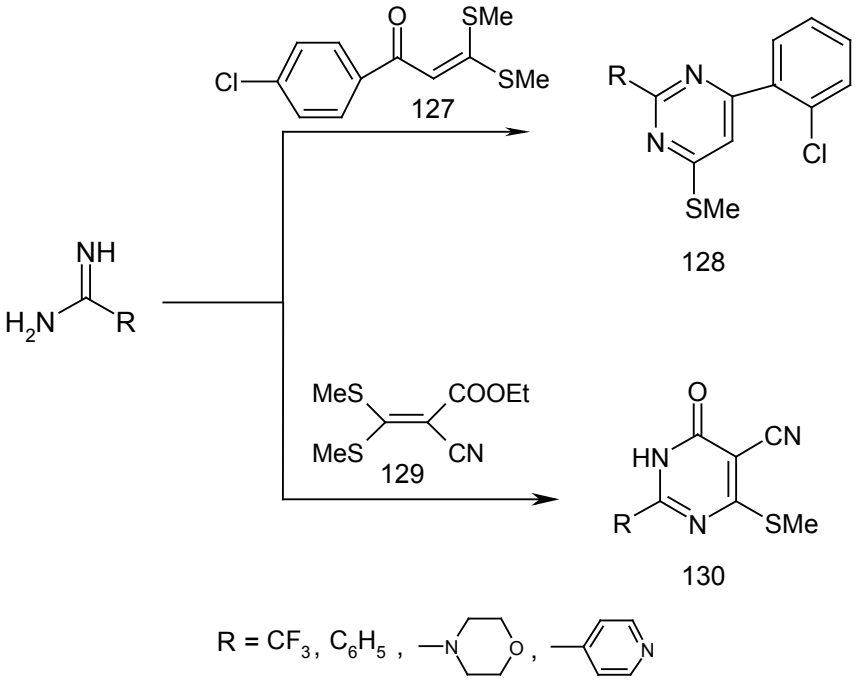
a, R = NHCOMe; b, R = $NHNH_2Ph$

Furan-2,3-dione 124 and thiosemicarbazones 125 combined with loss of carbon dioxide and water to yield 1-methyleneaminopyrimidine-2-thione derivative 126[80].

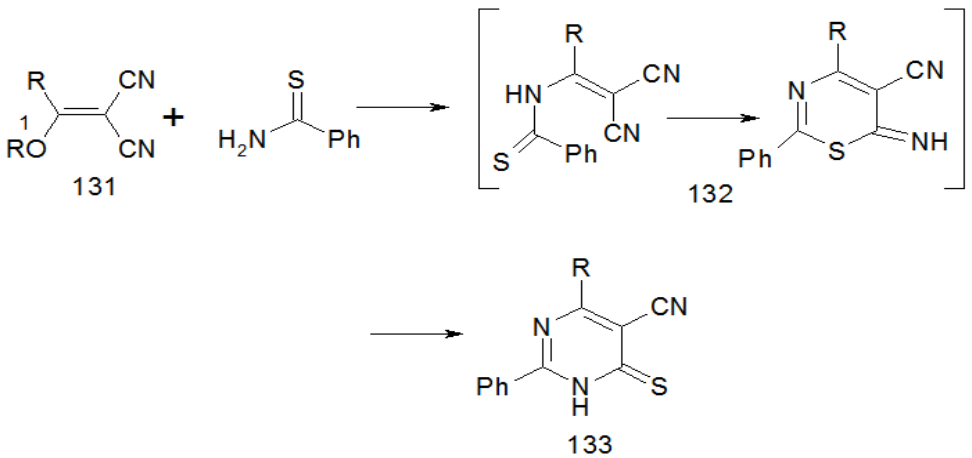


ii. *From Guanidine Derivatives*

Guanidine derivatives are considered as basic unit for the preparation of 4-thiopyrimidines. Thus, reaction of guanidine derivatives with benzoylethylene derivative 127 and acrylate derivative 129 afforded pyrimidine derivatives 128 and 130[81,82] respectively.

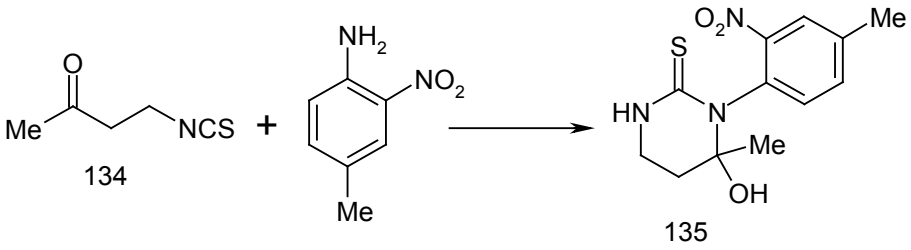


Treatment of 3-alkoxy-3-aryl(or alkyl)-2-cyanoacrylonitriles (131) with thiobenzamide and sodium isopropoxide in 2-propanol yielded 6-thioxo-3,4-dihydropyrimidine derivatives 133 through the formation of 3-aryl(or alkyl)-2-cyano-3-thiobenzamide cyanoacrylonitriles (132)[83].

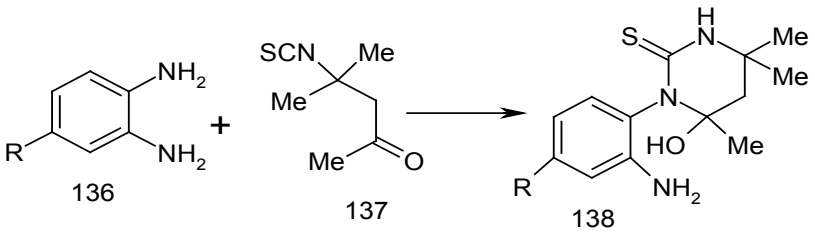


iii. *From Isothiocyanate Derivatives*

Isothiocyanate derivatives are used for the synthesis of 2- and 4-pyrimidinethiones. Thus, 1-(2-nitro-4-methylphenyl)-6-hydroxy-6-methyl-1,4,5,6-tetrahydropyrimidine-2(3H)thione (135)[84] was prepared by the reaction of 4-isothiocyanatobutan-2-one (134) with 4-methyl-2-nitroaniline.

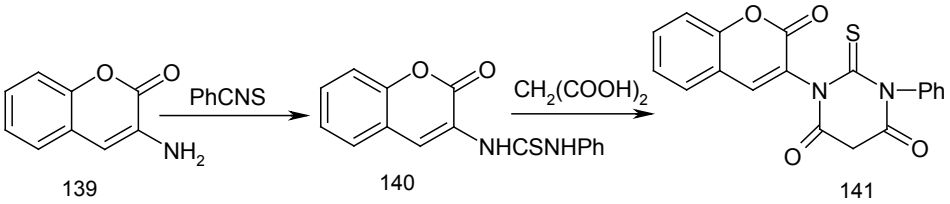


Phenylenediamines 136 was allowed to react with 4-isothiocyanato-4-methyl-2-pentanone (137) at room temperature to give aryltetrahydropyrimidine-2-thiones 138[85].

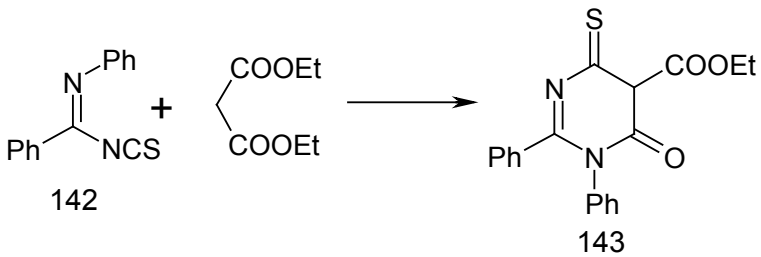


R = H, Me, OMe

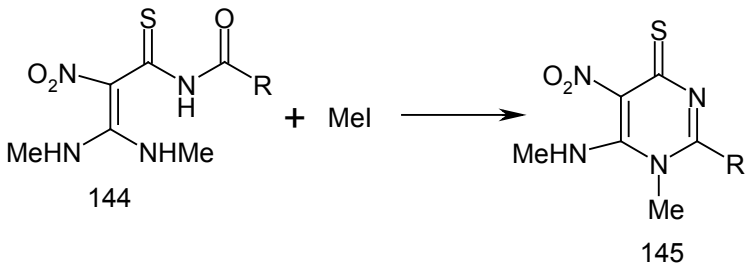
Treatment of 3-aminocoumarin (139) with phenyl isothiocyanate in ethanol afforded coumarinylphenylthiourea 140 which underwent cyclocondensation with malonic acid in acetyl chloride to give coumarnylphenylthiobarbituric acid 141[86].



When isothiocyanate derivative 142 was allowed to react with diethyl malonate gave pyrimidinethione 143[87].

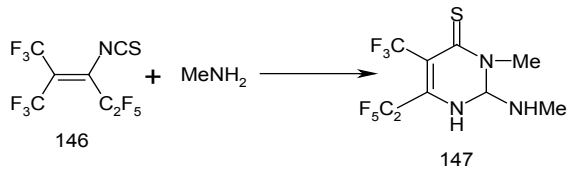


2-Aryl-1-methyl-5-nitro-6-methylaminopyrimidine-4-thiones (145)[88] were synthesized by the reaction of nitrokenaminal acylisocyanate C-adducts 144 with methyl iodide.



R = C_6H_5 ; 4-ClC_6H_4 ; 4-MeO-C_6H_3-CH=CH- ; C_6H_4-CH=CH-

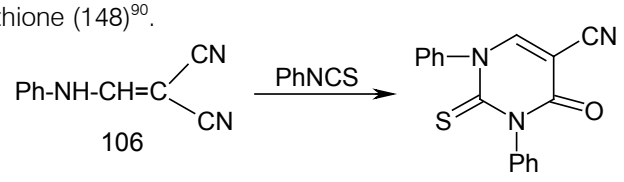
Treatment of perfluoro-2-methylpent-2-en-3-yl isothiocyanate (146) with methylamine afforded 3-methyl-2-methyl-amino-6-pentafluroethyl-5-trifluorome-thyl-3H-pyrimidine-4-thione (147)89.



146 147

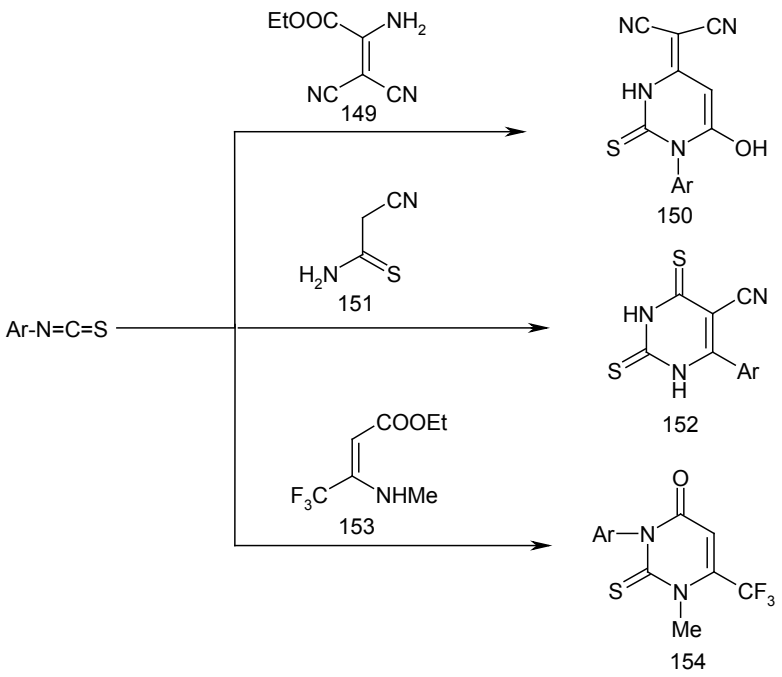
b) Synthesis from C-C-C-N and C-N fragments

Pyrimidinethiones synthesized by this manner may be contain thioxo group at 2 or 4 position. Thus, treatment of β-enaminonitrile 106 with phenyl isothiocyanate in ethanol containing sodium hydroxide furnished 5-cyano-1,3-diphenyl-4-oxo-pyrimidine-2-thione (148)[90].

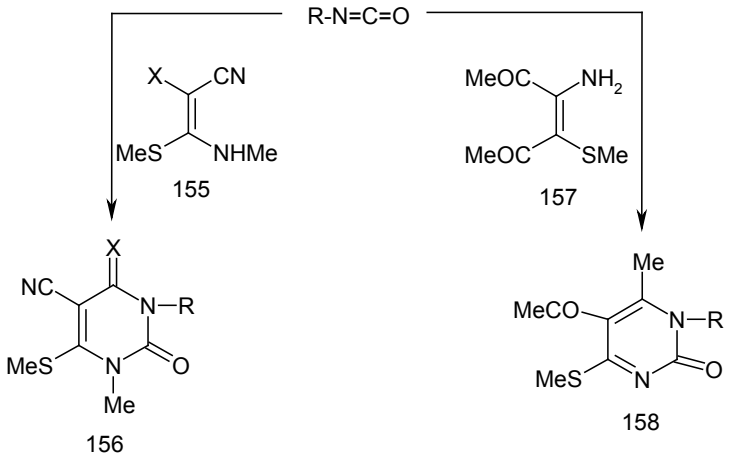


106 148

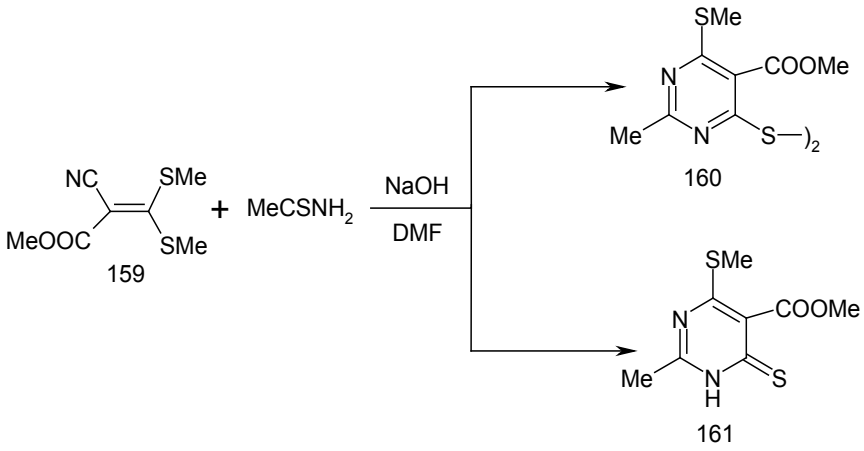
On the other hand, phenylisothiocyante derivatives was reacted with ethyl enaminonitrile 149[91], cyanothioacetamide 151[92] and methylamino acrylate 153 to give pyrimidinethio- ne derivatives 150, 152 and 154, respectively.



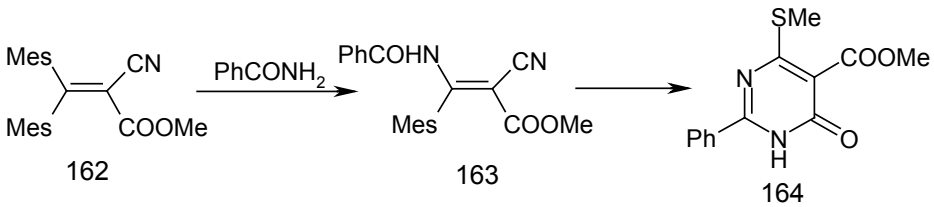
Reaction of isocyanate derivative with ketene S,N-acetals 155[93] and amino ethylene derivative 157[94] yielded pyrimidine derivatives 156 and 158, respectively.



Treatment of methyl-2-cyano-3,3-bis[methylthio]propenate (159) and thioacetamide in NaOH/DMF afforded bis [5-(methoxycarbonyl)-2-methyl-6-methylthio-4-pyrimidine] disulphide (160) and 5-(methoxycarbonyl))-2-methyl-4-(methyllthio)-1(H)-pyri-midinethione 161[95].

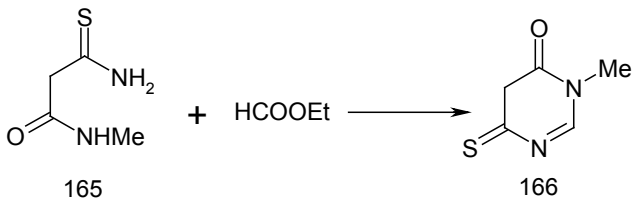


Reaction of methyl 2-cyano-3,3-bis(methylthio) acrylate (162) with benzamide in the presence of sodium hydride gave methyl 3-benzoylamino-2-cyano-3-(methylthio)acrylate (163), which readily converted to methyl 3,4-dihydro-6-(methylthio)-4-oxo-2-phenyl-pyrimidine-5-carboxylate (164)[96].

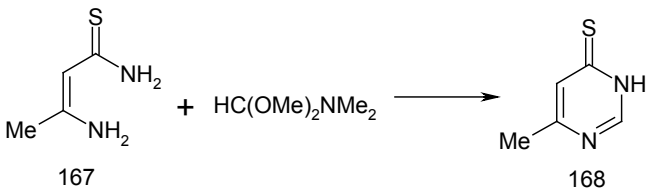


c) *Synthesis from N-C-C-C-N and C-fragments*

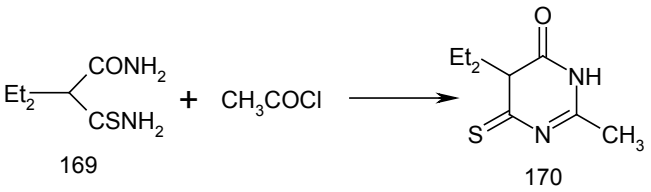
3-Amino-N-methyl-3-thioxopropanamide (165) allowed to react with ethyl formate to yield 3-methyl-6-thioxo-5,6-dihydropyrimidin-4-one (166)[97].



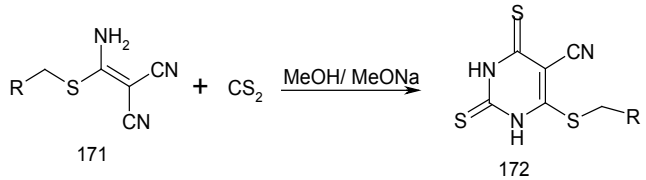
Cyclization of β-aminothiocrotamide (167) with dimethyl formamide dimethyl acetal afforded 6-methyl-4(3H)-pyrimidinethione (168)[98].



Treatment of 2-ethyl-2-thiocarbomylbutyramide (169) with acetyl chloride yielded pyrimidinethione 170[99].

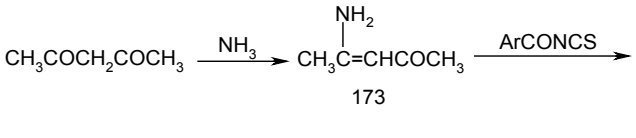


Cyclocondensation of enaminonitrile 171 with carbon disulfide gave pyrimidinethione derivatives 172[100].

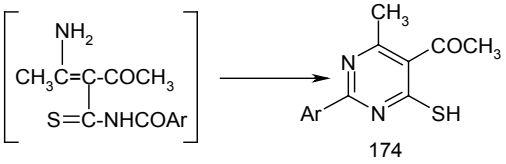


d) Synthesis from C-C-N and C-N-C fragments:

Reaction of acetylacetone with ammonia gave α,β-unsaturated aminoketone 173. When an equimolarcular amounts of 173 and aroylisothiocyanate were heated in dioxan afforded 4-mercapto-6-methyl-2-aryl-5-acetylpyrimidines 174[101-104].

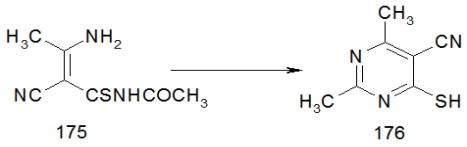


173



174

The adduct of β-aminocrotononitrile and acetylisothiocyanate 175 underwent base catalyzed cyclization to yield pyrimidine derivative 176[105,106].



175 176

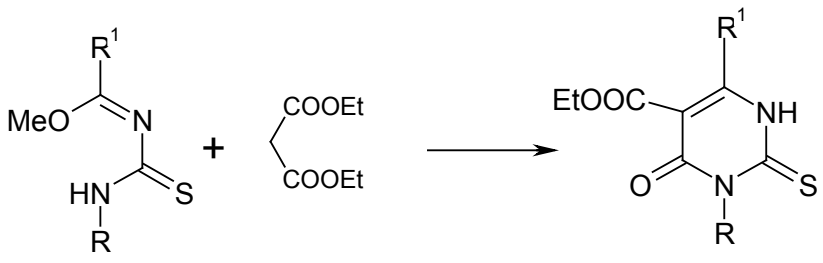
Reaction of 177 with thiocyanate derivatives in acetone gave pyrimidinethiones 178[107].

177 178

R = Ph, Me

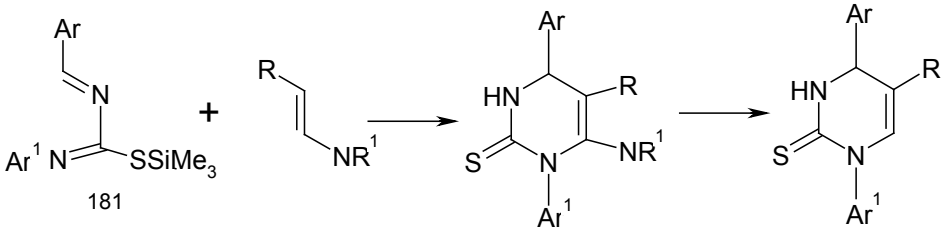
e) Synthesis from N-C-N-C and C-C fragments

Ethyl pyrimidine-5-carboxylate 180 was prepared by the reaction of 179 with diethyl malonate in the presence of ethanolic sodium ethoxide[108].



179 180

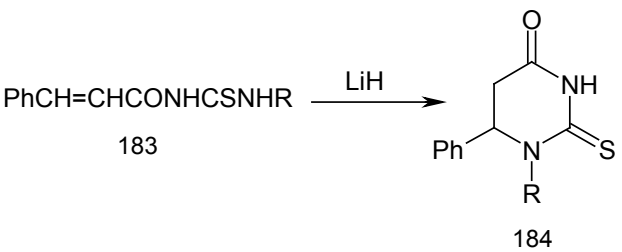
Reversed polarization in 2-trimethylsilylthio-1,3-diene 181 allows percyclic reaction with acyclic enamines to give pyrimidinethione 182[109].



181 182

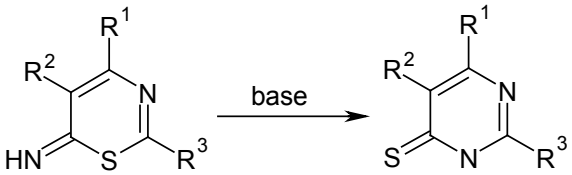
f) Miscellaneous Methods

cyclization of n-(4-substitutedphenyl)-n\-3-phenylprop enoylthiourea (183) with lithium hydride yielded thiouracil 184[110].



183 184

6-imino-6*H*-1,3-thiazines 185 underwent Dimroth rearrangement when treated with a base to form thioxopyrimidines 186[111].



185 186

III. Applications of Pyrimidinethiones

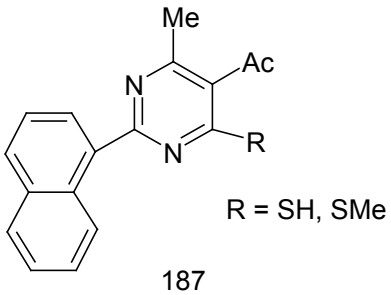
One important class of pyrimidine is 2-thiopyrimidine (2-TP) and its derivatives, which are also well known as 2-mercaptopyrimidine compounds. In 2-TP ring sulfur atom serves as an interesting replacement for the existing oxygen atom bonded to C-2 in uridine base. Studies evaluated primary activity of 2-TP

derivatives against Mycobacterium tuberculosis (Mtb). 2-TPs also serve as important precursors for asymmetric synthesis of allylic sulfides/sulfonates.

Recently, international applications revealed that, 2-TP derivatives possess potent activity against inflammation and immune disorders. Thus, search for novel, potent and selective 2-TP derivatives is desirable in order to substitute drugs having major side effects such as peptic-ulcer formation and gastro-intestinal damage. Various mono-, di-, tri- and tetra-cyclic, di/tetrahydro-2-TP derivatives have been synthesized and evaluated for anti-inflammatory and analgesic activity (both in *vivo* and in *vitro*)[1].

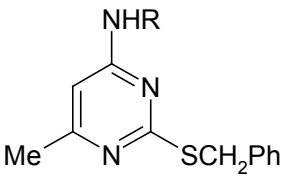
The widespread use of thiols as drugs, cosmetics, corrosion inhibitors, agents in photographic and vulcanization processes and chemical analysis of varied metal ions as well as different bio-oriented compounds[112].

Pyrimidine derivatives 187 exhibited bactericidal activity in vitro against *Salmonella spp*., *St. albus*, and *B. subtilis*[113].



187

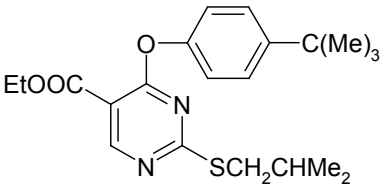
2-Benzylthio-4-substitutedamino-6-methylpyrimidines 188 were screened against selected bacteria which showed a moderate activity against *Bacillus subtilis* and *Neisseria*[114].



R = C_6H_5, 4 -Me-C_6H_5, 4 -Br-C_6H_4

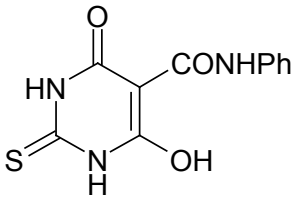
188

Phenoxypyrimidinecarboxylate 189 is a better herbicide against *Podosphaera lucotricha* on apples[115].



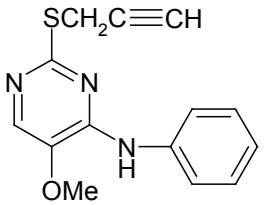
189

Pyrimidinecarboxanilide 190 is effective neoplasm inhibitors in vivo tests in mice[116].



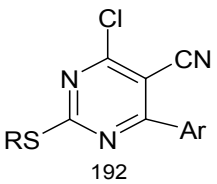
190

4-Anilinopyrimidine 191 at 60 ppm gave complete control of *Pseudo- cercosporella herbotrichoides* on wheat[117].



191

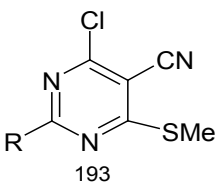
4-Chloropyrimidines 192 and 193 were submitted for preliminary evaluation of their in vitro activity against *M. tuberculosis*, human isolates of *Klebsiella pneumoniae*, *Pseudomonas aeruginosa*, *S. faecalis*, *Staphylococcus aureus*, *E. coli* and antimycotic activity against *Candida albicans*, *Cryptococcus neoformans*, *Sporothrix schenckii*, *Aspergillus fumigatus* and *T. mentagrophytes*[118].



192

R = Me, Et, n-Pr, 4-Cl-$C_6H_4CH_2$

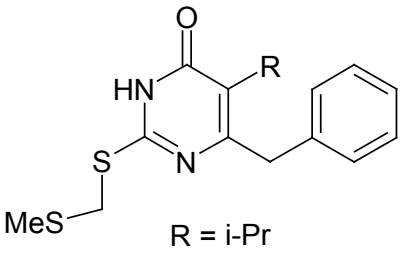
Ar = 2-thienyl, 2-furyl, 2,4- $F_2C_6H_3$, 3- FC_6H_4



193

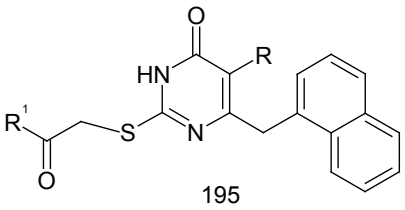
R = SMe, S-$CH_2C_6H_5$

5-Isopropyl-2-[(methylthiomethyl)thio]-6-(benzyl) -pyrimidin-4-(1H)-one (194) elicited potent anti-HIV activity with an IC_{50} value less than 1 nM for inhibition of HIV replication[119].



194

6-(1-Naphthylmethyl) pyrimidin-4(3H)-ones 195 were evaluated for cytotoxicity and anti-HIV activity in MT-4 cells using the MTT method, which exhibited extremely potent inhibitory activity against HIV replication[120].



195

R = Me, Et, i-Pr

R^1 = Me, MeO, OEt, C_6H_5, 4- Cl- C_6H_4 ,

4- F- C_6H_4 , 4- Me- C_6H_4 , 4- MeO- C_6H_4

Antitumor activity screening for 10-nitro-4-(p-nitrophenyl)-1,3,4,5,6,7-hexahydro-2H-benzo[6,7] cyclo-hepta[1,2-d]-pyrimidine-2-thione (196) utilizing 59 different human tumor cell lines, representing leukemia, melanoma, and cancers of the lung, colon, brain, ovary, breast, prostate as well as kidney, was carried out. From the in vitro observed data it has been noticed that, compound 196 seem to be active against all the tested cell lines[121].

Kinetics Studies and Mechanism Evolution of the Cyclization of Ethylene Diamine and Propylene Glycol over Alumina Supported Nanocrystalline Mn-Ferrite

By Rajeev Dixit

Devi Ahilya University, Indore

Abstract- Kinetics of Cyclization of propylene glycol and ethylene diamine to 2-methyl pyrazine has been studied over alumina-supported nanocrystalline $MnFe_2O_4$ catalyst in a differential flow fixed bed reactor in the temperature range 473 – 573 K. The partial pressures of propylene glycol and ethylene diamine were varied and rates were measured for the formation of 2 Methyl Pyrazine. Product selectivity as well as rate of formation of 2-methyl pyrazine was influenced by partial pressure of reactants. The rate equation R = k KP.KE PP PE / (1+ K P PP+K E PE) 2 deduced, on the basis of adsorption of PG and ED in gas phase represented the data most satisfactorily.

Kinetics Studies and Mechanism Evolution of the Cyclization of Ethylene Diamine and Propylene Glycol over Alumina Supported Nanocrystalline Mn-Ferrite

Rajeev Dixit

Abstract- Kinetics of Cyclization of propylene glycol and ethylene diamine to 2-methyl pyrazine has been studied over alumina-supported nanocrystalline MnFe2O4 catalyst in a differential flow fixed bed reactor in the temperature range 473 – 573 K. The partial pressures of propylene glycol and ethylene diamine were varied and rates were measured for the formation of 2 Methyl Pyrazine. Product selectivity as well as rate of formation of 2-methyl pyrazine was influenced by partial pressure of reactants. The rate equation R = k KP.KE PP PE / (1+ K P PP+K E PE) 2 deduced, on the basis of adsorption of PG and ED in gas phase represented the data most satisfactorily.

Keywords: *cyclization, differential flow fixed bed reactor, adsorption, alumina-supported, nanocrystalline, 2 methyl pyrazine.*

I. Introduction

Nanosize materials are known to exhibit certain properties that are different from their bulk counterparts [1] such materials possess higher surface area, band gap, coercivity, acidity / alkalinity and coordination of atoms. The chemical properties also vary because of the changes in the electron density as a function of particle size, resulting thereby in binding modes of the adsorbate molecules that are different than that observed in the case of corresponding bulk materials. Additionally, in case of supported catalysts, the electronic interaction between the nano-dispersed metal crystallites and the support materials are known to influence the chemisorptions properties. Providing support to the nanocrystalline metal oxides avoids their agglomeration in actual reaction conditions and helps achieve highly dispersed and uniform size particles. Anpo *at al*. and Maira *at al.* [2-3] In addition to large surfaces, support helps in the shape selectivity and also provides an inert envelope to protect from the chemical effect of the reaction medium.

2-MP is the pivotal intermediate for obtaining 2-cyanopyrazine, which on hydrolysis yields pyrazinamide, a well-known anti-tubercular drug. Conventionally, chromite catalysts are used for vapour phase synthesis of 2-MP. There are reports on the use of Palladized Zn-Cr oxide Forni *at al.* [4] ZSM-5 Kulkarni *at al.* [5] Modified copper-chromite Ilnam *at al.* [6] binary catalyst based on oxides of Zn and variable valence metals Balpanov *at al.* [7] Zn-modified zeolites Anand *at al.* [8] Zn-modified ferrite Anand *at al.* [9] and $CuO/ZnO/SiO_2$ Subramanyam *at al.* [10] as catalysts for synthesis of 2-MP from ED and PG. To the best of our knowledge, there is no report on the kinetics of cyclization of propylene glycol (PG) and ethylene diamine (ED) to produce 2-MP over alumina supported nanocrystalline manganese ferrite. The present problem of kinetic study of synthesis of 2-MP from PG and ED was therefore undertaken with a view (1) to collect data on the kinetics of the vapour phase synthesis of 2MP over alumina support Mn-ferrite (AMF) catalyst (2) to find a suitable rate law, which can explain the data satisfactorily, and (3) to predict a mechanism of the reaction. The catalyst has been characterized using IR, XRD, SEM, besides Surface Area measurement and Acidity measurement with the objective of understanding structure and nature of bonding over the catalyst surface.

In the present investigation of the kinetics of 2 MP synthesis over alumina supported catalyst, we have followed the usual procedure of calculation of partial pressure of reactants and rate of formation of 2-MP and subjected these data to different rate models based on surface reactions. From the derived rate equation, a tentative mechanism of the reaction has been suggested. An endeavour has also been made to support the present mechanism with the help of information to the author from literature.

II. Experimental

a) Catalyst Preparation

For preparation of alumina supported $MnFe_2O_4$, 16g of sized alumina (6/10 B.S.S. mesh size) was soaked in the dilute solution of manganese and iron salts (3.4 g of $MnCl_2.4H_2O$ and 4.3g of $Fe(NO_3)_3.9H_2O$ in 1 liter of water) for 3-4 hours. 1N NaOH was added to this system to allow precipitation of mixed hydroxides of the metals. The system was allowed to digest at 80°C for 4h. The catalyst was decanted and washed

Author : *Devi Ahilya University, Indore. e-mail: rajeevdixit08@gmail.com*

repeatedly with distilled water till free from chloride and nitrate ions. The material was oven dried and calcined at 500°C for 6h at atmospheric pressure to get alumina supported $MnFe_2O_4$ (AMF) catalyst.

b) Differential Reactor

In this reactor, only a small amount of catalyst is used so as to keep the conversion level low. This permits direct evaluation of reaction rates. Because of small contact time, the composition remains practically constant throughout the catalyst bed and rates obtained are initial rates. The initial rates obtained under these conditions are extremely helpful in simplifying rate equations. This technique is also helpful in dealing reactions with large heat effects.

The experimental set-up for kinetic measurement is similar to that described in chapter two. 0.1 g of catalyst was used for kinetic studies.

c) Experimental Procedure

The collection of data for kinetic studies of the vapour phase cyclization of ED and PG were collected at atmospheric pressure in a vertical, down flow, fixed bed reactor. The upper half of the reactor worked as pre-heater and the lower half as the reactor. The fresh catalyst was charged in the center of the reactor. Activation was attained by heating the catalyst in air at 773K for 4h and then cooling to the desired temperatures in a current of nitrogen and finally exposing to feed stream a mixture of ED, PG and water. Besides, functioning as a solvent, steam reduces the dealkylation of 2-MP to pyrazine, avoids charring, and reduces formation of aromatics. The liquid products were collected using a cold-water condenser. A blank run without any catalyst indicated negligible thermal conversion.

d) Identification and analysis of products

Before collecting data on a differential reactor few experiments were performed in a macro-reactor taking 10 g of catalysts and feeding ED, PG and water in the weight ratio of 1:1:2. About 50 ml of the product mixture was collected and was subjected to fractional distillation. The product boiling in the range 130-140°C was collected. A record of FT-IR spectrum of the distillate showed band in the region 2900-3200 cm^{-1}. Band appeared below 3000 cm^{-1} were assigned to C-H stretching modes of CH_3 group while those appeared above 3000 cm^{-1} were assigned to C-H stretching modes of ring hydrogen. There appeared medium to strong bands in the region 1000-1700 cm^{-1} characteristic of C-H / N-H bending modes and ring vibrations. These observations confirmed presence of 2-MP in the product. Further confirmation was made by comparing the FID retention time of 2-MP in the above mentioned distillate with that of standard 2-MP. Quantitative analysis was made on the basis of GLC peak area measurements. A Chemito model 7610 GLC machine was used for quantitative analysis. The analysis of product composition with differential reactor was made with GLC only.

e) Catalyst Characterization

The XRD records of alumina supported $MnFe_2O_4$ (AMF), $MnFe_2O_4$ (MF) were recorded over Rigaku X-ray powder diffractometer using Cu-K_α radiation as source are reproduced. The recordings confirm the crystallinity of the samples and appearance of most of the peaks of support as well as catalyst Cullity *at al*. [11] (Figure 1).

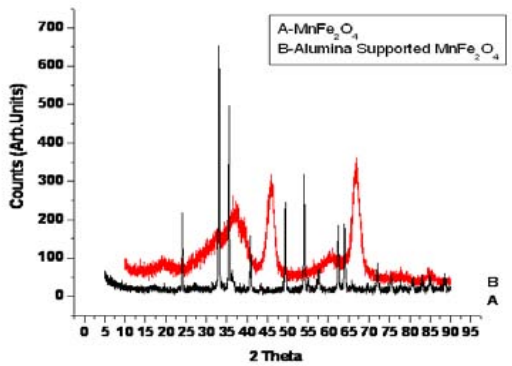

Figure 1 : X Ray Diffractogram of Mn Fe_2O_4 and Alumina supported $MnFe_2O_4$

Ammonia desorption experiments were carried out to measure the acidity of the catalyst using ammonia as an adsorbate. Detailed procedure is described elsewhere Cullity *at al.* [12] The BET surface areas were measured by N_2 adsorption at liquid N_2 temperature using BET surface area analyzer (Model SAA-2002, S.P.Consultant, Mumbai) and was found to be 206.6 $m^2 g^{-1}$. The FTIR spectrum of the alumina supported manganese ferrite catalyst was recorded on Perkin Elmer series 1600 FTIR spectrometer and are reproduced. Scanning electron microscopy (SEM) pictures were obtained using JEOL JSM-5600 instrument and are reproduced. (Figure 2 and 3).

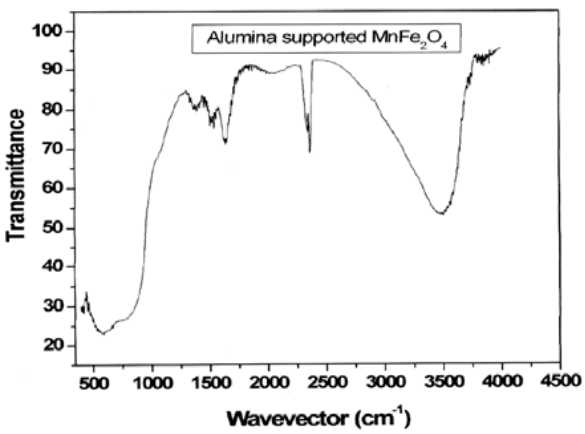

Figure 2 : FTIR Spectrum of Alumina supported $MnFe_2O_4$

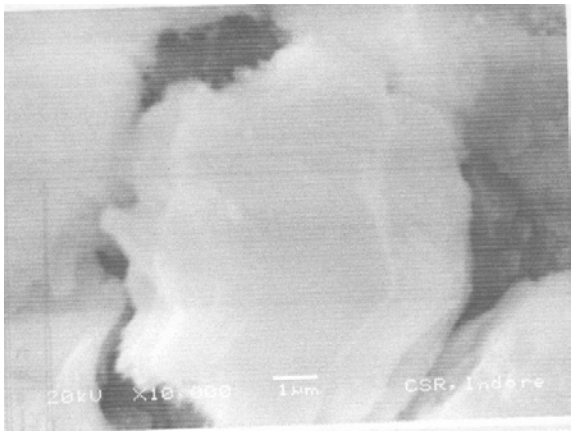

Figure 3 : SEM image of Alumina supported MnFeO4

III. Results and Discussion

a) Nomenclature

The reaction rates were calculated from the relation

$$R = F.\frac{Xp}{S}$$

Where F is the flow rate of reactants, Xp is the percent composition of particular product in the reaction mixture as obtained from GLC and S is the surface area of the catalyst.

P_p = partial pressure of propylene glycol

P_E = partial pressure of ethylene diamine

K_p = adsorption equilibrium constant for adsorption of propylene glycol

K_E = adsorption equilibrium constant of ethylene diamine

k = rate constant of the reaction

b) Effect of partial pressure of reactants on rates

All kinetic measurements were performed under low conversion (below 10 % conversion of PG). All measurements were taken after a study state condition was reached in the catalytic activity. Some standard experiments were performed from time to time to confirm that catalytic activity was constant and did not change with time. No reaction was observed at 350 °C in absence of catalyst even after several hours.

c) Effect of partial pressure of propylene glycol on rates

Effect of partial pressure of propylene glycol on rates was studied by varying the same while keeping the partial pressure of ethylene diamine constant. Total pressure was kept constant by introducing some amount of inert gas in the feed. The data thus obtained are presented at 473 K, 523 K and 573 K [Figure 4, Table 1].

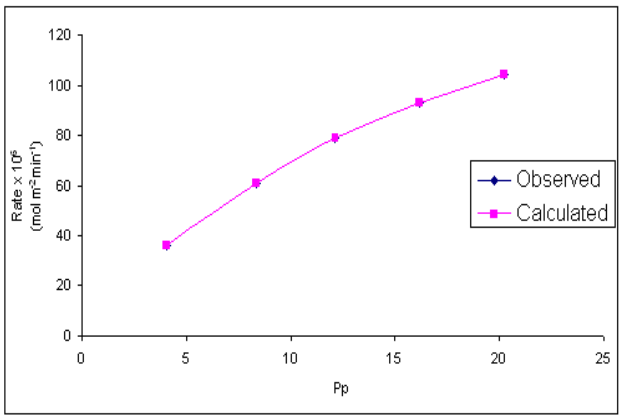

Figure 4 : Effect of Partial Pressure of Propyline Glycol (Pp) on rate of formation of 2 - MP Temp. 573 K

Table 1 : Effect of patial pressure of propylene glycol on rates

S.No.	Partial pressures of PG	Rate x 10^6 (moles s^{-1} m^{-2}) 473 K Observed	473 K Calculated	523 K Observed	523 K Calculated
1	4.05	2.11	2.11	17.70	17.70
2	8.10	3.60	3.60	29.38	29.38
3	12.15	4.72	4.72	37.67	37.67
4	16.21	5.58	5.58	43.86	43.86
5	20.26	6.23	6.23	48.65	48.65

Weight of catalyst : 0.1g, Partial pressure of ethylene diamine :9.11 kPa

None of the plots were linear between rate and partial pressure. All plots are bend towards pressure axis.

d) Effect of partial pressure of ethylene diamine on rates

Effect of variation of partial pressure of ethylene diamine on rates was studied at 473, 523 and 573 K under constant partial pressure of propylene glycol. The results are presented for the temperatures of 473 and 523. The graphical representation is shown for the temperature of 573 K .In this case also plots were not linear and bend towards pressure axis. (Figure 5 Table 2).

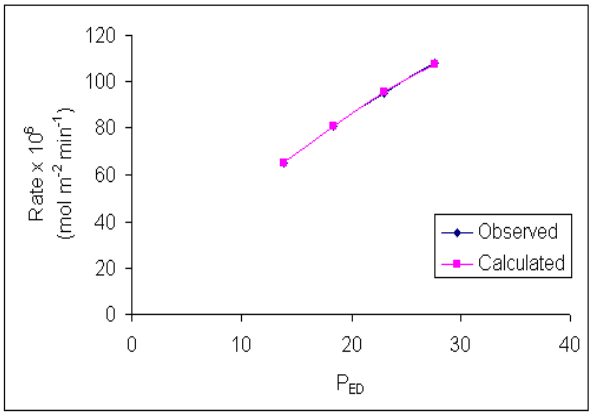

Figure 5 : Effect of Partial Pressure of Ethylene Diamine (P_{ED}) on rate of formation of 2 - MP Temp. 573 K

Table 2 : Effect of partial pressure of ethylene diamine on rates

S.No.	Partial pressures of ED	Rate x 10^6 (moles s^{-1} m^{-2}) 473 K		523 K	
		Observe	Calculated	Observed	Calculated

4	27.56	6.20	6.00	50.06	50.06

Weight of catalyst: 0.1g, Partial pressure of propylene glycol: 4.05 kPa

e) Effect of temperature on rates

Effect of temperature on rates is studied. Activation energy was calculated from arrhenius plot are shown. The rates increased with temperature. (Figure 6, Table 3).

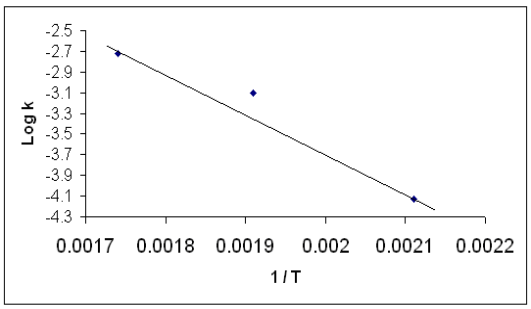

Figure 6 : Log k vs 1/T

Table 3 : Reaction rate constant and adsorption equilibrium constants

Temperature(K)	1/T	k	Log k	K_A	K_B
473	0.00211	0.000074	- 4.13	38.61	29.51
523	0.00191	0.00077	- 3.10	22.61	11.41
573	0.00174	0.0019	- 2.72	12.49	5.68

IV. Treatment of Rate Data

The activation energy was found to be 34.32 k cal. mol^{-1}. In the present study of the vapour phase kinetics of cyclization of propylene glycol and ethylene diamine to 2-methylpyrazine over alumina supported mangenese ferrite catalyst, we collected data under conditions that conversion was bellow 10 %. Rate data collected under this condition can be termed as initial rates. Besides we used only 0.1 g of catalyst so as to minimise mass transfer and diffusional effects. Since mass transfer from gas phase to the catalyst surface and diffusion through the catalyst bed were not rate controlling, the possibility of surface adsorption of reactants and surface reactions as rate controlling steps were left. We tested two most popular models applied for such cases namely Langmuir-Hinselwood model and Reidel model. The farmer assumes reaction between adsorbed PG and adsorbed ED, while the latter assumes reaction between an adsorbed reactant and another one remaining in gas phase. The rate laws derived on the basis of these two models are presented. (Table 4).

Table 4 : Models Tested for Cyclization of Propylene Glycol and Ethylenediamine

Model No.	Langmuir-Hinshelwood model	Resulting rate equation
1.	$CH_3\underset{\displaystyle OH}{\underset{|}{C}}H\text{-}CH_2\text{-}OH + S \rightarrow CH_3\text{-}\underset{\displaystyle OH}{\underset{|}{C}}H\text{-}CH_2OH\text{-}S$ $NH_2\text{-}CH_2\text{-}CH_2\text{-}NH_2 + S \rightarrow NH_2\text{-}CH_2\text{-}CH_2\text{-}NH_2\text{-}S$ $CH_3\underset{\displaystyle OH}{\underset{|}{C}}H\text{-}CH_2\text{-}OH\text{-}S + NH_2\text{-}CH_2\text{-}CH_2\text{-}NH_2\text{-}S \rightarrow$ 	$R=kK_PK_EP_PP_E/(1+K_pP_p+K_EP_E)^2$
2.	$CH_3\underset{\displaystyle OH}{\underset{|}{C}}H\text{-}CH_2OH + S \rightarrow CH_3\text{-}\underset{\displaystyle OH}{\underset{|}{C}}H\text{-}CH_2OH\text{-}S$ $CH_3\underset{\displaystyle OH}{\underset{|}{C}}H\text{-}CH_2\text{-}OH\text{-}S + NH_2\text{-}CH_2\text{-}CH_2\text{-}NH_2 \rightarrow$ 	$R= k\ K_P\ P_PP_E\ /\ 1+\ K_E\ (P_E)$

S = Surface, P_P = Partial pressure of Propylene Glycol, P_E = Partial pressure of Ethylene diamine, K = Equilibrium Constant, k = Rate Constant

As the rate constants are physical quantities their values can not be negative. An inspection of Table 4 reveals that positive constants are found only for Reidel model assuming one reactant adsorbed on the surface and another one remaining in gas phase. A plot of observed rates along with calculated rates obtained from reidel model are shown. (Figure 7).

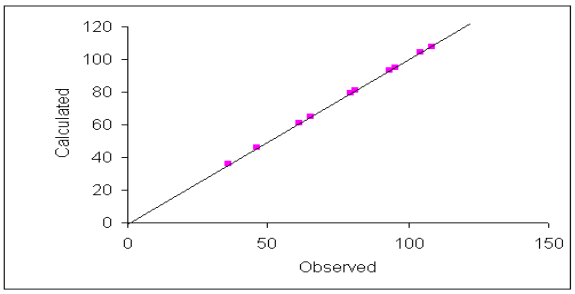

Figure 7 : Calculated Rates v/s Observed Rates

Reasonable agreement between observed rates and calculated rates confirm the validity of Reidel model. Further confirmation of the model was obtained by ploting observed rates vs calculated rates. The plot is found to be a straight line with an inclination of 45 degree passing through origin. This again confirms the validity of the model. A plot of observed rates vs. residuals is shown. The plot does not show any hetroscedic pattern (Figure 8).

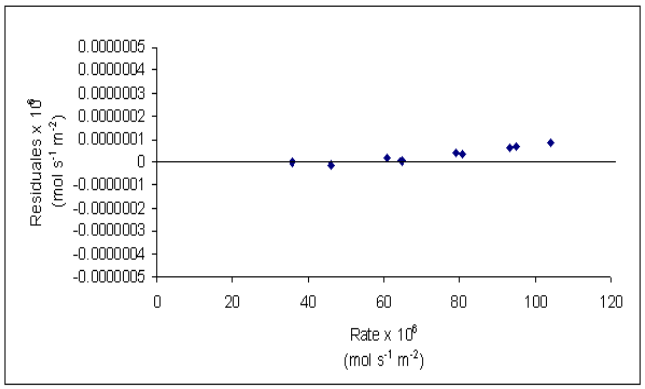

Figure 8 : Residuals v/s Calculated Rates

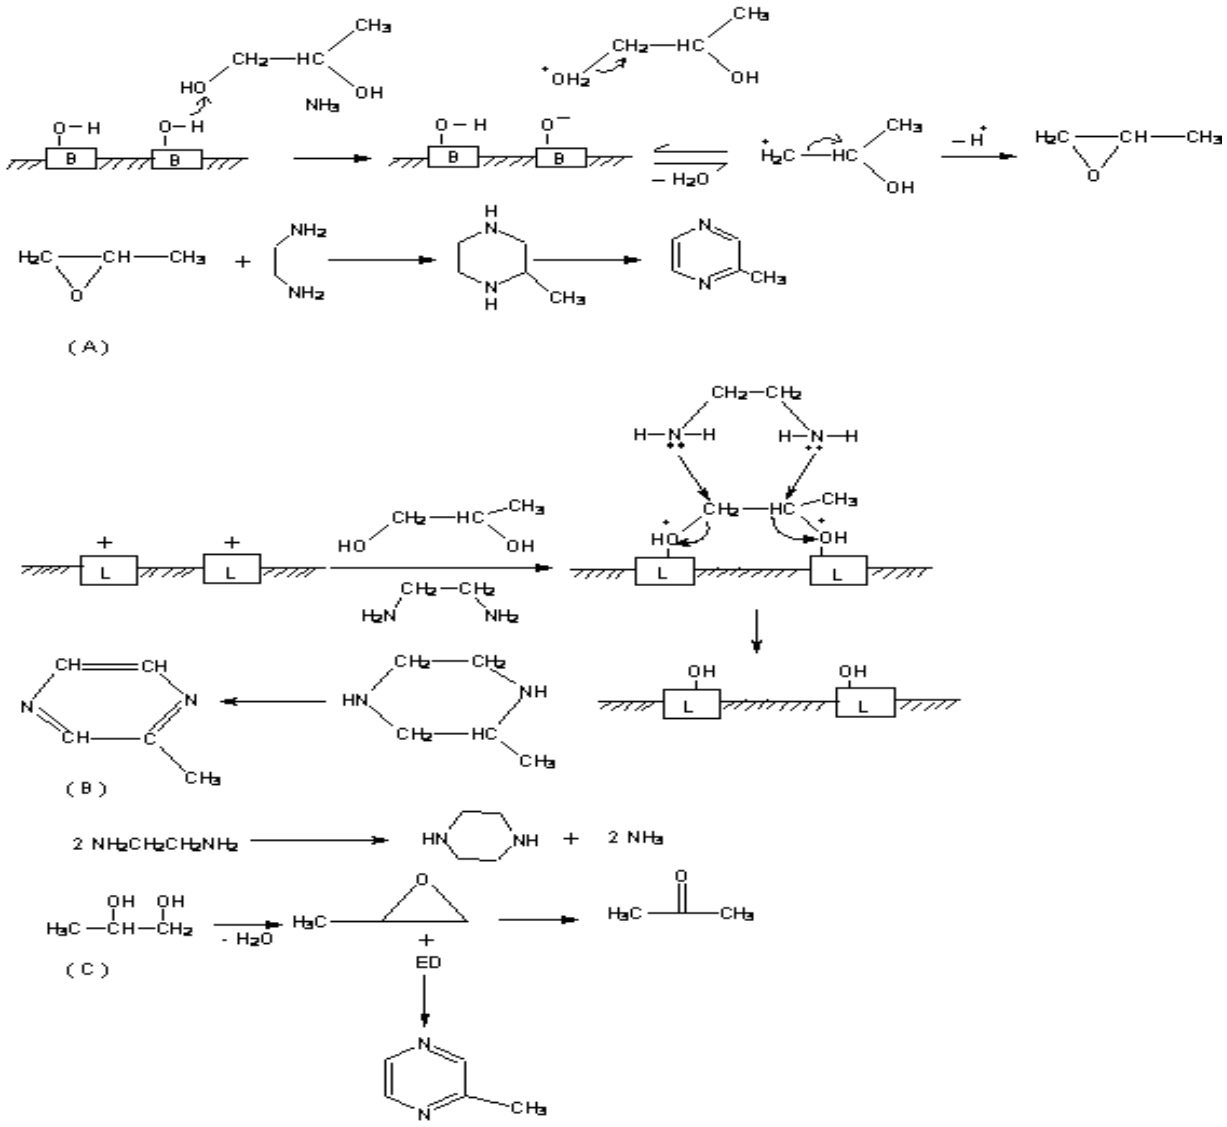
V. Mechanism of the Process

2-methyl pyrazine was found to be major product in the present study. Acetone was also detected in traces. When 2-methylpiperazine alone was passed over the catalyst in the reactor, 2-MP was found to be the only product. When PG alone was fed over the catalyst we obtained acetone as the major product. Passing hydrogen peroxide in the feed stream has no effect, indicating that free radical mechanism was not operative. Based on these observations, analysis of products and on the fact that kinetics follows a Reidel type of mechanism, an attempt is made here to predict a mechanism for the reaction.

Kulkarni et al [5] have proposed a mechanism for synthesis of 2-MP from PG and ED over ZSM –5 catalyst. According to these authors, PG is adsorbed over the catalyst, gets protonated, looses a molecules of water and is converted into carbonium ion. The carbonium ion looses a proton and produces propylene oxide. Propylene oxide can react with ED to produce 2-methyl piperazine, which is dehydrogenated to produce 2-methyl pyrazine. Although, this sounds well, it does not support the Reidel type of mechanism in which PG is adsorbed on the surface and reacts with ED present in Gas phase.

VI. Reaction Mechanism

The present catalyst contains both Lewis as well as Brönsted sites. While Lewis sites come from $MnFe_2O_4$, Brönsted sites come from hydroxyl group of alumina. It seems Lewis as well as Brönsted sites activate reaction of PG and ED. In case of Brönsted sites PG is adsorb first, gets protonated, looses a molecule of water and produces a carboniumion. The carbonium ion looses a proton and produces propylene oxide. Propylene oxide can react with ED to produce 2-methyl piperazine, which is dehydrogenated to produce 2-methyl pyrazine. In order to confirm this we passed 2-methylpiperazine alone over the catalyst in the reactor, and obtained 2-MP as the only product. Propylene oxide can also rearrange to produce acetone. In fact, when PG alone was fed over the catalyst we obtained acetone as the major product. This mechanism is consistent with the mechanism proposed by Kulkarni et.al [5] for synthesis of 2-MP from PG and ED over ZSM–5 catalyst. The mechanism over Brönsted sites is shown. Over Lewis acidic sites above type of mechanism is rather unlikely, because of (1) absence of, Brönsted sites (2) high possibility of ED over PG for adsorption over Lewis Sites (ED is stronger base then PG). However, because of much higher concentration of PG & H_2O over ED, it is possible that they displace few adsorbed ED molecules and produce Brönsted sites. Once such Brönsted sites are produced, the mechanism will follow the usual route of PG protonation, dehydration, formation of propylene oxide and reaction with ED to produce 2-methyl piperazine followed by its dehydrogenation to give 2-methyl pyrazine. This mechanism is consistent with the mechanism proposed by Forni and Paolo in their studies on TPD–TPR–MS Mechanistic study of the synthesis of 2-methylpyrazine over palladized Zn–Cr Oxide. The mechanism over Lewis sites is shown. When ED alone was fed over the catalyst ammonia and pyrazine were obtained. The mechanism of by products formation is shown. (Scheme 1 (a), (b) and (c)).



Scheme 1 : Reaction mechanism of vapour phase catalytic synthesis of 2-MP over alumina Supported manganese ferrite catalysts (a) bronsted sites (b) Lewis sites (c) formation of by products

Isolation and Characterization of a New Phytotoxic Molecule from Culture Fluids of Verticillium Dahliae

By Hassan Laouane, My Hassan Sedra & Hassan B. Lazrek

M.D. University, India

Abstract- The verticillium dahliae liquid culture was extracted with butanol. The BE was able to induce necrosis of cutting stem of olive tree at 40 µg/ml the same toxicity was obtained with acetone precipitate (AP) at 50 µg/ml. The CPG profile of the fraction obtained by purification of BE on preparative TLC showed the presence of two peaks. The identification of these two compounds was based on the mass spectrum and confirmed by the data from library of mass spectra NIST (National Institute of Standards and Technology), and were assigned as two isomers: E-cinnamyl acetate (major product, VdT) and Z-cinnamyl acetate (minor product).

I. Introduction

Phytotoxins are microbial metabolites which, at low concentration are harmful to plants. Many different fungi and bacteria are known to produce a wide range of metabolites in culture, which are toxic to plants. These include certain substance with varied biochemical structures, belonging to certain groups with height molecular weight such as quinines, polyketides, sterols, terpenoids, glycopeptides and glycoproteins (Mansoori and Smith, 2005; Buchner et al., 1987; Nachmias et al., 1982, 1987). Small molecules such as fusaric acid (Chawla and Wenzel 1987a; 1987b) eutypine and sterehirsutinal (Perrin-Cherioux et al., 2004) also have been described.

The most important disease of olive-tree growing in several Mediterranean Basin countries is Verticillium wilt (Zazzarini and Tosi, 1994; Cirulli et al., 1998; Tosi and Zazzarini, 1998; Vigouroux et al., 1975; Matallah et al., 1996; Saydam and Copu 1972; Ahmad et al., 1988), which is caused by Verticillium dahliae (Kleb). The later is a pathogenic agent of large variety of plants (Koike et al., 1995).

In Morocco, the disease was first observed in the region of Meknes (Serrhini, 1992). Since then, it has spread extensively in the main olive-growing belt of Morocco (Lachger and Sedra, 1996; Sedra, 2002). The very sensitive variety, "Picholine marocain", is widely cultivated, being approximately 98% of the total olive cultivation in Morocco and 5% of international cultivated territory of olive tree.

The difficulty of the verticillium dahliae control depends on the absence of host specificity and extreme pathogenicity's variability.

Most effective and economical means of reducing the disease impact are offered by varietal resistance. But, critical evaluation of olive trees and of segregating material for resistance to *V. dahliae* under field is time-consuming and expensive. In the same context, reports of the *in vitro* production of phytotoxins by *Verticillium* spp. (Green, 1954; Mc Lead, 1961; Malysheva and Zel'tser, 1968; Keen and Long, 1972; Cronshaw and Pegg, 1976; Nachmias *et al*., 1982), and their potential use as tools for rapid screening for resistance in different hosts (Michail and Can 1966; Irland and Leath, 1987) have been of great interest.

In this context, a toxic precipitate with acetone from the culture verticillium filtrate was obtained (Nachmias et al., 1982). This precipitate contains molecules with high molecular weight such as a protein-lipopolysaccharide toxin (Nachmias et al., 1985). The toxin with low molecular weight of this fungus had never been determined. The main objectives of this study were to show the presence of low molecular weight toxin in the filtrate after precipitation of all macromolecules by methanol. The filtrate was extracted with butanol and we have tested the toxicity of this fraction on stem cuttings of olive tree cultivar and compared with the toxicity of acetone precipitate obtained according to the method used by Nachmias in 1982.

II. Materials and Methods

a) Fungal Culture

V. dahliae (V10) was provided by the laboratory of INRA-Marrakech Phytopathology. A isolate kept in sterile sand was sown on PDA and incubated for 8 days at 25 ° C. Part of colony was suspended in sterile water. The Czapek medium (5 L) was made (for 1 L): 30 g of sucrose, 1 g of K2HPO4, 2 g of NaNO3, 0.5 g KCl, 0.5 g of MgSO4, 0.01 g of FeSO4. The pH was adjusted to 7 with NaOH and HCl. The medium was distributed as aliquots of 100 ml in 250 ml Erlenmeyer flasks which were then autoclaved at 121 ° C for 20 min. Each flask was inoculated with 1 ml of conidia suspension

Authors α σ ρ : Unité de Chimie biomoléculaire et Médicinale (URAC 16). Département de Chimie, Faculté des Sciences Semlalia Université Cadi Ayyad, Boulvard Moulay Abdelah B.P 2390 40000 Marrakech, Maroc. Laboratoire de Phytopathologie, Génétique et Lutte Intégrée INRA- Marrakech, Maroc. e-mail: hblazrek50@gmail.com

(10^6 conidia/ml) and incubated at room temperature (25 ° C) on a rotary shaker maintained at 80 rpm for 15 days. After centrifugation at 4200 g for 20 min and the supernatant was used for the butanol extraction. All chemicals and solvents were pure and were purchased from Sigma-Aldrich and Fluka.

b) Butanolic Extract (BE)

The obtained supernatant was evaporated under reduced pressure at 45 ° C to 250 ml. An equal volume of methanol was added and the mixture was kept for 48 hours at 4 ° C. The precipitate was filtered off and washed with methanol / water (1:1, v / v). The white precipitate was discarded, while the fractions resulting from filtrate and rinsing were mixed and evaporated under vacuum at 45 ° C to a volume of about 200 ml (F1). A glass column (3.5 x 60 cm) was filled with a mixture of 24 g of norite and 37.5 g of Celite homogenized in distilled water.

The concentrated fraction (F1, 200ml) was then passed through this column, and was washed with 100 ml of distilled water. The filtrates were collected (about 300 ml) and subjected to extraction with n-butanol (3 x 100 ml). The butanolic extract (BE) was evaporated to dryness, and gave 200mg of crude toxin (Figure 1). The later was subjected to purification by preparative TLC and analysed by GC-MS.

c) Acetone Precipitate (AP)

According to the procedure outlined by Nachmias et al. (1982, 1985), the crude toxin (AP) was obtained by precipitation with acetone from the in vitro culture of the V. Dahliae. A sterile Czapek liquid medium (100 ml) in Roux bottles was inoculated with 1 ml of conidia suspension (10^6conidia/ml) and incubated at room temperature (25°C) on a rotatory shaker maintained at 80 rpm for 15 days. The culture medium was centrifuged at 4200g for 20 mn, and the supernatant was concentrated under vacuum at 45°C in an evaporator. The concentrated fraction (one tenth of original volume) was dealt with four volumes of cold acetone (-18°C) and permitted to stand overnight at this temperature. The AP was collected by centrifugation at 10000g for 10 min at 5°C. The supernatant was discarded and the pellet was air dried and stored at 4°C.

d) Phytotoxin Bioassays

Stem cuttings were taken from the Picholine marocaine olive tree cultivar, which is susceptible to *V. dahliae* and represents about 98% of the cultivated varieties in Morocco. The bioassays were made according to the method described by Sedra (2002) and Amraoui (2005); the young stem were taken from olive tree susceptible to *verticillium dahliae* (Picholine marocaine), and then one stem was put in sterile glass test tubes, with the stem bases dipped in a *40 µg/ml* solution of the butanolic extract. The second assay was carried out in the same manner with the acetone precipitate (AP) at *50µg/ml as a positive control*. The tubes were kept at 25-27 °C in a growth chamber and were exposed to a 12 h photoperiodicity.

The tests were triplicated. The cuttings were rated after a 10 days period. Thereafter, appearance of symptoms of *Verticillium* wilt were observed: brown leaves, leaf necrosis, wilted stem with chlorosis, necrosis and leaf curl.

e) Preparative TLC and GC-MS Analysis of BE Fraction

A sample of the BE extract was purified on a silica gel TLC preparative plate (Kiesegel, 60 F 254) with a mixture of CH_2Cl_2/MeOH (9.5:0.5, v/v) as eluent. The silica gel band revelled with UV at 254 nm (Rf = 0.95) was scratched and the obtained powder was washed with methanol. The filtrate was analysed by gas chromatography on a Varian 3800 analyzer fitted with a fused silica capillary column BP5 (0.25 mm id, 25 m, 0.25 µm coating thickness), directly coupled to a Saturn 2000 MSD mass spectrometer. The GC/MSD was operated under the following conditions: injector temperature 220°C; transfer line 240°C; oven temperature programmed from 60 °C to 240 °C (3°C/min); carrier gas He at 1.0 ml/min; injection 0.1µl.

Compound identification was done by GC coupled to MS and a computer system that managed a library of mass spectra NIST (National Institute of Standards and Technology).

III. Results

a) Stem Cutting Assays

In susceptible reactions, cuttings displayed *Verticillium* wilt-like symptoms after uptake of the AP (acetone precipitate) and B.E (butanolic extract). The high toxicity of AP was obtained at 50 µg/ml, with 80% of mortality. The same toxicity symptoms observed with butanolic extract at 40 µg/ml with 80% of mortality (figure 2).

Leaves first became chlorotic, then developed necrosis that usually began at the margins of leaflets and progressed inward. Leaflets often curled inward or twisted around the midvein as they became necrotic and dried. Sometimes, leaflets or entire petioles abscised while the stem remained green and upright, and new green leaves emerged. The earliest symptoms were observed 5 days after treatment, and severe symptoms developed after 10 days. In contrast, no symptoms were observed on controls with water. These observations provide the first evidence that the butanolic extract is a toxic fraction composed with new phytotoxic compound present in the *Verticillium. dahliae* culture medium.

b) Extraction and Identification of the Natural Toxin

The purification of BE using the preparative TLC, according the method used by Akor and Anjori (2009), gave two major bonds (Rf = 0.95 and Rf=0.96

after migration using 95/5 methylene chloride/methanol as solvent). These compounds were analysed by GC-Mass spectroscopy according to the method used by Imelouane (2009) for identification of essential oil of *Lavadula dentata* and thyme (*Thymis vilgaris*) from Eastern Morocco. The figure 3 shows the chromatographic profiles. The identification of these two compounds was based on the mass spectrum and confirmed by the data from library of mass spectra NIST (National Institute of Standards and Technology), and were assigned as: two isomers E and Z of cinnamyl acetate ($C_{10}H_{12}O_2$) with an abundance of 70% and 30% respectively (figure 4).

IV. Discussion

The BE have potential for use to induce symptoms of *verticillium dahliae*. Both the stem cutting assay could be reduce the time required for a selection compared with the currently used root-soak method.

Studies of metabolite production by *Verticillium albo-atrum* and *Verticillium dahliae* showed that they both produce high molecular weight toxic substances in liquid culture media (Nachmias *et al*., 1982, 1985, 1987; Riaan *et al*., 1994; Clovis *et al.,* 2006). Some of these toxins, are peptidic nature, were purified from culture fluids of potato isolates of *Verticillium dahliae* (Buchner *et al*., 1989), and induced interveinal chlorosis, followed by necrosis, when injected into excised leaves from disease-susceptible potatoes. In the present work, we showed that *Verticillium dahliae*, which is a plant pathogenic agent, is capable of producing a toxin that can able to induce the characteristic symptom of *verticillium dahliae* disease. Moreover, BE showed to be more toxic than either the AP fraction. The BE induced severe symptoms more rapidly. The purification of BE using the preparative TLC gave two major compounds which were analysed by GC-Mass spectroscopy and were assigned as two isomers E and Z of cinnamyl acetate ($C_{10}H_{12}O_2$) with an abundance of 70% and 30% respectively.

In our laboratory we have synthesised the major product, E-cinnamyl acetate (laouane 2011). This product was used in a screening program and we showed that 'Picholine Languedoc' has developed a susceptibility to the phytotoxin at 20 µg/mL, moreover, the same symptoms were obtained only at 10 µg/mL for 'Picholine Marocaine'.

This result suggests that the *verticillium dahliae* produces low molecular weight toxic substances in liquid culture. In addition, the stem cutting assay could provide an additional tool for screening plants for resistance to *verticillium dahliae*.

Susceptible olive tree (picholine marocaine) cutting treated with BE developed typical symptoms for *Verticillium Dahliae*-infected olive tree in the field (Lachger and Sedra, 1996, Serhini, 1992). This result supports that the BE is producing the same symptoms as those produced by fungal inoculation. Others host plants showed similar symptoms (Clovis S *et al* , 2006; Nachmias *et al.,* 1987; Scheffer, R. P., 1976; Irland, K. F. and K. T. Leath, 1987) when treated with toxins and fungal filtrate.

V. Conclusion

In the present study we described for the first time a protocol for the extraction and the determination of the structure of a new phytotoxin produced by a strain of Verticillium Dahliae which is pathogenic on olive tree. We have provided evidence that the butanolic fraction play a role in the development of the Verticillium wilt disease symptoms in susceptible olive tree more rapidily. The butanolic fraction showed the presence of two isomers: E-cinnamyl acetate (major product, VdT) and Z-cinnamyl acetate (minor product). The toxicity of E-cinnamyl acetate (major product, VdT) was confirmed on steam cutting olive tree.

Methylation of Aniline over Mn-Cu Ferrites Catalysts

By Rajeev Dixit, P Gupta, Samidha Saxena & Reena Dwivedi

Devi Ahilya University, Indore

Abstract- The structural and catalytic properties of the mixed spinel ferrite system $Mn_{1-x}Cu_xFe_2O_4$ (x=0, 0.25, 0.5,0.75, 1.0) have been investigated by X-Ray diffraction, Mössbauer and catalytic activity measurements. The variation of lattice parameter, crystallite size, and Mössbauer parameters of the product formed with the variation in the concentration of Cu has been studied. XRD Study revealed the formation of phase pure spinels with FCC cubic structure with particle size ranging from 5.21 nm to 20 nm. Lattice constant values showed constant decrease with increasing concentration. Mössbauer spectra showed the presence of Fe^{3+} at both octahedral and tetrahedral sites. These ferrites were used as catalysts in the alkylation of Aniline. A maximum conversion of 80.5 % of aniline with selectivity of 98.6 % towards N-methylaniline (NMA) has been obtained at a temperature 673 K, Methanol : Aniline molar ratio of 5:1 and weight hour space velocity (WHSV) of 0.2 h-1. It was found that the yield is maximum for $CuFe_2O_4$. The result is supported by acidity measurements.

Keywords: mn-cu ferrites; ferrospinel; methylation; aniline; cubic structure.

Lattice constant values showed constant decrease with increasing concentration. Mössbauer spectra showed the presence of Fe^{3+} at both octahedral and tetrahedral sites. These ferrites were used as catalysts in the alkylation of Aniline. A maximum conversion of 80.5 % of aniline with selectivity of 98.6 % towards N-methylaniline (NMA) has been obtained at a temperature 673 K, Methanol : Aniline molar ratio of 5:1 and weight hour space velocity (WHSV) of 0.2 h-1. It was found that the yield is maximum for $CuFe_2O_4$. The result is supported by acidity measurements.

Keywords: mn-cu ferrites; ferrospinel; methylation; aniline; cubic structure.

I. Introduction

Alkyl anilines are valuable intermediates for the manufacture of pharmaceuticals, drugs, dyes and agrochemicals. These compounds may be prepared by catalytic alkylation of aniline with various alkylating reagents: There are reports on alkylation of aniline in liquid phase under pressure[1], in vapour phase using oxides[2], Raney-Nickel[3], zeolites[4], AEL type molecular sieves[5], clays[6-10] and few spinels[11-14].

The unusual properties exhibited by nanoparticle and their promising technological applications have attracted much interest in recent years. [15]. There particles are shown to posses low saturation magnetization, Ms, enhance coercivity, H_c, and higher curie temperature, T_c, as compared to bulk materials, [16-21]. This phenomenon have been ascribed to random canting of surface spins [22], pinning of spins at particles surface or presence of a dead layer around magnetic core materials [23] and interparticle interactions [24]. It has been shown that certain ferrites with nanosized particles, posses metastable state and the cation distribution is different from that of bulk ferrites, where divalent metal occupies only tetrahedral, A, site and Fe^{+3} occupies only octahedral, B, site. In addition to these physical effects, nanoparticle ferrites are found to be excellent catalyst of alkylation and cyclization reactions with very high conversion and selectivity. The high performances of ferrite cata1yst have been attributed to cations distribution of different particles size, lattice parameters and acido-basic characters of ferrite catalyst. To the best of our know1edge, there is no report on the methylation of aniline over copper-manganese ferrites (Cu-Mn ferrite). The present problem of the methylation of aniline over Cu-Mn ferrites was there fore undertaken with a view to optimize the Cu-Mn-Fe composition and process conditions over the catalyst for maximum conversion of aniline. Besides these, catalysts have been characterized by XRD and Mössbauer spectroscopy, BET surface area and acidity measurements. The cation distribution obtained from Mössbauer study has been used to explain acidity and cata1ytic activity of the catalysts.

II. Experimental

a) Preparation of the Sample

Nanoparticle of $Cu_{1-x}Mn_x Fe_2O_4$ (x = 0, 0.25, 0.5, 0.75, 1.0) were prepared by co- precipitation method. Required quantities of $MnCl_2$, Fe $(NO_3)_3.9H_2O$ and $Cu(NO)_3.3H_2O$ were dissolved in excess of distilled water. The pH of the solution was adjusted to 9 with dilute solution of NaOH. Excess of water fast stirring and slow addition of NaOH solution are must for getting small size particles. The resulting mixture was heated at a temperature of 333 K along with stirring for one hour. Then, it was kept for settling in the heating mode at 333 K for half an hour for digestion. The product was washed by repeated decantation with 1.5 dm^3 portions of water until the supernatant is free of Cl^- (about 10-15 washings was required). The precipitate was filtered through Buchner funnel, dried in oven at 393 K and calcined at 673 K. The material was sieved through a 6/10 mesh sieve. After sieving the bigger size clusters were kept for acidity and catalytic activity evaluation while smaller size clusters obtained after sieving, were ground into fine powders and were used fur XRD and Mössbauer experiment.

b) Characterization of Samples

X-Ray diffraction pattern were recorded using Cu - K_α radiation (angle range 20° to 65°) as the source

Authors α ρ ω : Catalysis and Nanomaterials Research Laboratory School of Chemical Sciences, Devi Ahilya University, Indore.
Author σ : IPS Academy, Indore. e-mail: rajeevdixit08@gmail.com

on a Rigaku X-Ray diffractometer. Diffraction patterns show the sharp lines corresponding to single-phase spinel for the samples as the entire peaks match well with the characteristic reflections of the corresponding ferrite. The average particle size was measured by broadening of the (311) peak and applying Debye - Scherer equation. Lattice cell parameters were also calculated using Bragg's equation.

c) Mössbauer Measurements

Samples were crushed to obtain fine powder in order to observe Mössbauer spectra. The Mössbauer absorber was prepared by spreading the paste of powdered sample and vacuum grease over perplex glass that is used as the sample holder. The absorption spectra were recorded in transmission geometry at room temperature with constant acceleration Mössbauer drive along with a 256 multichannel analyzer, using Austin Science Inc, USA Mössbauer. A single line source ^{57}Fe(Rh) with initial activity of 10 mCi was used. Several runs were taken in order to check the reproducibility of the spectra. Total counts collected were about 10^6 or more. The Mössbauer spectrometer was calibrated using a 0.001 inch enriched α-Fe foil. The outer lines are separated through 10.68 mm/s. This is an excellent agreement with an ideal absorption spectrum and calibration was done accordingly. The experimental data were computer fitted using the least square-fitting program assuming Lorentzian line shape with χ^2 minimization technique. The solid line through the data points is the result of the computer fit of the data.

d) Acidity Measurement

Acidity measurement were performed by ammonia desorption method. This experiment was carried out in order to measure the acidity of the ferrite catalyst using ammonia as an adsorbate. 1 g of the catalyst was packed in between two plugs of glass wool in a Pyrex tube down flow fixed bed reactor and heated to 773 K under a nitrogen gas flow rate of 0.5 cm^3/s for 1.5 hour. The reactor wag coo1ed to room temperature and adsorption was conducted at this temperature during which the sample was exposed to ammonia for 1.5 hours. In order to remove physically adsorbed ammonia from the purged sample again nitrogen gas was allowed to pass through it at the rate of 0.5 $cm^3\ h^{-1}$as the same rate at 353 K for 1 hour. The acid strength distribution was obtained raising the catalyst temperature from 353 K -773 K during the flow of nitrogen gas and absorbing the evolved ammonia in distilled water containing phenolphthalein as an indicator. Titrating the water solution with standard 0.1 M HCl solution in different temperature ranges lead to quantitative estimation.

e) Catalytic Activity

The alkylation unit consists of three parts i.e. feed system, reactor and product recovery unit. The reactor was charged with a known weight (5g) of catalyst and was clamped in the assembly holder. The tubular heater was also clamped in the stand. The reactor was then joined to the product recovery unit and syringe pump filled with known volume of reactant mixture. The catalyst was activated at 773 K by passing air and then brought down to desired temperature by cooling down in the current of N_2. The mixture of reactant was fed by a 10 ml syringe pump. The liquid product was condensed with the help of cold-water condenser, a cold trap and was analyzed by shimadzu gas chromatography using SE-30 column and FID detector.

III. Results and Discussion

a) XRD analysis

XRD patterns shown in Fig 3.1 reveals the formation of spinel phase of ferrite as all the composition showed the characteristic reflection of the spine1 phase. All the peaks of $MnFe_2O_4$ and $CuFe_2O_4$ matched well with those as reported for the same in JCPDS Card No.10-319; 3-864. The reflections at the planes (111), (220), (311), (222), (400), (422), (511), (440) can be detected with d values of 4.89, 2.97, 2.53, 2.42, 2.08, 1.71, 1.61, 1.49 respectively. Accordingly the lattice cell parameters were also calculated that matched well with the values as reported in the JCPDS card numbers given above. Lattice cell parameter shows a linear decrease from 8.49 A^0 to 8.39 A^0 with the introduction of Cu in $MnFe_2O_4$ as could be seen clearly from the fig 3.2 and may be attributed to the replacement of Mn^{2+} (0.80 A) by smaller Cu^{+2} (0.69 A). This also confirms the formation of solid solution. The mean crystallite size was calculated by broadening of the (311) diffraction peak and applying Scherer formula and the range is in between 7.2 nm - 20 nm. Surface area was also estimated from the crystallite size data assuming the crystallites to be of spherical shapes. They depend on the size of the particle as is clear from the reported values in Table 3.1. The average particle size and lattice cell parameter for the above mixed ferrite nanoparticles are also reported in Table 1.

b) Mössbauer

Mössbauer absorption spectra for the samp1es i.e. x = 0, 0.5, 1.0 were recorded at room temperature as shown in Fig. 3. The spectra were fitted using NORMOS fitting program and hyperfine parameters e.g. isomer shift δ, quadrupole splitting, Δ, line width, Γ, and hyperfine field, H_{int}, thus obtained are listed in Table 3.2. The Mössbauer spectra exhibit broad magnetic hyperfine sp1it sextets. In case of $MnFe_2O_4$ an additional doublet is seen which can be attributed to super paramagnetic behavior exhibited by smaller size

particles. The doublet was fitted with two sub spectra . The isomer shift was found to be 0.24-0.27 mm/s which can be attributed to Fe^{3+} ions in tetrahedral and octahedral sites. The sextets were fitted with two sub spectra. One sextet is due to Fe^{3+} ion at the tetrahedral A site and the outer sextet is due to Fe^{3+} at the octahedra1 B sites, which indicates the ferrimagnetic behavior of the samp1es. All of them shows isomer shift values in the range 0.22 mm/s to 0.34 mm/s, which could be attributed to the Fe^{3+} ions present at both the A and B sites of the spinel structure. This indicates that Mn^{2+} is also distributed between tetrahedral site and octahedral site. Similar metastable structure has been proposed by Rath et al [25] in nanocrystalline Mn ferrite. However, the case is different in bulk ferrites where Mn^{2+} prefers tetrahedral site while Fe^{3+} prefers octahedral site.

Distribution of Mn^{2+} on both the sites has also been reported for $MnFe_2O_4$ nanoparticles by Mahmoud et al. [26]. On addition of Cu^{2+} which can occupy both the sites but prefers the octahedral site, slight broadening of the line width and reduction in the intensity of the central lines is observed. These results agree with those reported earlier in the literature. The tetrahedral and octahedral positions of iron in the ferrospinels could a1so be distinguished on the basis of Magnetic hyperfine field, MHF. It has been mentioned that the internal MHF field experienced at A sites is smaller than that exerted at B sites: Usually, contribution of Fe^{2+} to the hyperfine field is significantly smaller than that of Fe^{3+} i.e. ferric ions. Also the isomer shift values for ions located at the tetrahedral site are generally smaller than those at octahedral site. It has also been reported that Fe^{3+} ions are at A site while Fe^{3+}/ Fe^{2+} both can reside at B site alternately. The observed isomer shift value confirms the presence of Fe^{3+} ions at both the sites while no Fe^{2+} is present in any of the composition. The intensity ratio A and B sites gives the ratio of the number of Fe atoms at A and B sites respectively. Quadrupole splitting has value near by zero for both the sites. As in the presence of strong magnetic interaction, the distribution of quadrupole interaction that arises from chemical disorder, produces an appreciable broadening of the individual Zeeman lines for both tetrahedral and octahedral patterns, but doesn't produces an observable quadrupole line shifts. Data extracted from the fits are reported in table 2.

c) Effect of acidity and process variable

The performance of various Mn-Cu ferrite catalysts along with their acidity, XRD surface area, particle size, and lattice constants is presented in Table 3.1. It can be seen that conversion of aniline as well as acidity of different catalysts increase with increase in copper content of the ferrites. Similar trend can be seen for surface area. The increase XRD surface is due to decrease in particle size of the sample with increase in Cu content. Consistency in lattice parameters of all the ferrites confirms them to possess same lattice type as concluded in section.

The order of catalytic activity of ferrospinels towards overall conversion was found to be CF> MCF-3>MCF-2>MCF-l>MF. It can be concluded from these resu1ts that. catalytic performance of the ferrites under consideration is proportional to surface area as well as acidity. An examination of the acidity reveals CF to be the better catalyst as its acidity value is larger and it also increases with increasing x as is clear from the reported values in Table 3.1. It also shows CF to be the better catalyst, as its aniline conversion (%) is larger.

The effect of methanol to aniline mo1ar ratio on the performance of copper ferrite is depicted in Figure 3.4. The conversion increases at lower molar ratio and tends towards limiting conversion at higher molar ratio, Maximum conversion of 82 % of aniline was obtained at methanol to aniline mo1ar ratio of 5 with NMA selectivity of 80 %.

The temperature effect on alkylation for MF at constant molar ratio was also studied in the temp range 473-773 K and resu1ts are presented in Table 3.5. Negligible conversion can be seen below 473 K whi1e the conversion effectively occurs in the range 673 K - 700 K. The best performance by the catalyst was shown at temperature 673 K with conversion of 62 and 15 % for N-methyl aniline and N-N-dimethyl aniline respectively, and selectivity of 79 and 62 % for NMA and NNDMA respectively. Conversions decreased due to charring and deposition of carbon on the catalyst surface at temperature higher than 673 K.

IV. Conclusion

$Mn_{l-x}Cu_xFe_xO_4$ (x = 0., 0.25 0.5 0.75 1.0) mixed ferrite nanopartic1es were obtained in a broad range of Cu concentration 0.0 < x <1.0 by coprecipitation and digestion method. Room temperature Mössbauer spectra of these fine partic1es exhibit slightly high va1ue of hyperfine field and broadening of the zeeman spectral lines shows strong ferromagnetic behavior of the three compositions. The occupancy ratio between Fe cation at A and B sites of the spinel structured is deduced from the fitted data of the Mössbauer spectra.

These mixed ferrite spinel systems were also studied for the alkylation of aniline using methanol as the alkylating agent. These systems effectively alkyl ate aniline to N-methyl aniline and N-N-dimethyl aniline under optimized reaction condition. Highest activity is obtained for CF whereas MF and MCF-1 were mildly activated. Substitution of Cu in MF leads to the increase in va1ue of acidity and the aniline conversion. This behavior suggests for Mn-Cu mixed ferrite system to be a good catalyst.

Global Journals Inc. (US) Guidelines Handbook 2013

www.GlobalJournals.org

FELLOWS

FELLOW OF ASSOCIATION OF RESEARCH SOCIETY IN SCIENCE (FARSS)

Global Journals Incorporate (USA) is accredited by Open Association of Research Society (OARS), U.S.A and in turn, awards "FARSS" title to individuals. The 'FARSS' title is accorded to a selected professional after the approval of the Editor-in-Chief/Editorial Board Members/Dean.

- The "FARSS" is a dignified title which is accorded to a person's name viz. Dr. John E. Hall, Ph.D., FARSS or William Walldroff, M.S., FARSS.

FARSS accrediting is an honor. It authenticates your research activities. After recognition as FARSB, you can add 'FARSS' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and repute to your name. You may use it on your professional Counseling Materials such as CV, Resume, and Visiting Card etc.

The following benefits can be availed by you only for next three years from the date of certification:

FARSS designated members are entitled to avail a 40% discount while publishing their research papers (of a single author) with Global Journals Incorporation (USA), if the same is accepted by Editorial Board/Peer Reviewers. If you are a main author or co-author in case of multiple authors, you will be entitled to avail discount of 10%.

Once FARSB title is accorded, the Fellow is authorized to organize a symposium/seminar/conference on behalf of Global Journal Incorporation (USA). The Fellow can also participate in conference/seminar/symposium organized by another institution as representative of Global Journal. In both the cases, it is mandatory for him to discuss with us and obtain our consent.

You may join as member of the Editorial Board of Global Journals Incorporation (USA) after successful completion of three years as Fellow and as Peer Reviewer. In addition, it is also desirable that you should organize seminar/symposium/conference at least once.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time.This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The FARSS can go through standards of OARS. You can also play vital role if you have any suggestions so that proper amendment can take place to improve the same for the benefit of entire research community.

As FARSS, you will be given a renowned, secure and free professional email address with 100 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders,Auto-Responders, Email Delivery Route tracing, etc.

The FARSS will be eligible for a free application of standardization of their researches. Standardization of research will be subject to acceptability within stipulated norms as the next step after publishing in a journal. We shall depute a team of specialized research professionals who will render their services for elevating your researches to next higher level, which is worldwide open standardization.

The FARSS member can apply for grading and certification of standards of their educational and Institutional Degrees to Open Association of Research, Society U.S.A.
Once you are designated as FARSS, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria. After certification of all your credentials by OARS, they will be published on your Fellow Profile link on website https://associationofresearch.org which will be helpful to upgrade the dignity.

The FARSS members can avail the benefits of free research podcasting in Global Research Radio with their research documents. After publishing the work, (including published elsewhere worldwide with proper authorization) you can upload your research paper with your recorded voice or you can utilize chargeable services of our professional RJs to record your paper in their voice on request.

The FARSS member also entitled to get the benefits of free research podcasting of their research documents through video clips. We can also streamline your conference videos and display your slides/ online slides and online research video clips at reasonable charges, on request.

The FARSS is eligible to earn from sales proceeds of his/her researches/reference/review Books or literature, while publishing with Global Journals. The FARSS can decide whether he/she would like to publish his/her research in a closed manner. In this case, whenever readers purchase that individual research paper for reading, maximum 60% of its profit earned as royalty by Global Journals, will be credited to his/her bank account. The entire entitled amount will be credited to his/her bank account exceeding limit of minimum fixed balance. There is no minimum time limit for collection. The FARSS member can decide its price and we can help in making the right decision.

The FARSS member is eligible to join as a paid peer reviewer at Global Journals Incorporation (USA) and can get remuneration of 15% of author fees, taken from the author of a respective paper. After reviewing 5 or more papers you can request to transfer the amount to your bank account.

MEMBER OF ASSOCIATION OF RESEARCH SOCIETY IN SCIENCE (MARSS)

The ' MARSS ' title is accorded to a selected professional after the approval of the Editor-in-Chief / Editorial Board Members/Dean.

The "MARSS" is a dignified ornament which is accorded to a person's name viz. Dr. John E. Hall, Ph.D., MARSS or William Walldroff, M.S., MARSS.

MARSS accrediting is an honor. It authenticates your research activities. After becoming MARSS, you can add 'MARSS' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and repute to your name. You may use it on your professional Counseling Materials such as CV, Resume, Visiting Card and Name Plate etc.

The following benefitscan be availed by you only for next three years from the date of certification.

MARSS designated members are entitled to avail a 25% discount while publishing their research papers (of a single author) in Global Journals Inc., if the same is accepted by our Editorial Board and Peer Reviewers. If you are a main author or co-author of a group of authors, you will get discount of 10%.

As MARSS, you will be given a renowned, secure and free professional email address with 30 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders,Auto-Responders, Email Delivery Route tracing, etc.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time.This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The MARSS member can apply for approval, grading and certification of standards of their educational and Institutional Degrees to Open Association of Research, Society U.S.A.

Once you are designated as MARSS, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria.

It is mandatory to read all terms and conditions carefully.

AUXILIARY MEMBERSHIPS

Institutional Fellow of Global Journals Incorporation (USA)-OARS (USA)

Global Journals Incorporation (USA) is accredited by Open Association of Research Society, U.S.A (OARS) and in turn, affiliates research institutions as "Institutional Fellow of Open Association of Research Society" (IFOARS).

The "FARSC" is a dignified title which is accorded to a person's name viz. Dr. John E. Hall, Ph.D., FARSC or William Walldroff, M.S., FARSC.

The IFOARS institution is entitled to form a Board comprised of one Chairperson and three to five board members preferably from different streams. The Board will be recognized as "Institutional Board of Open Association of Research Society"-(IBOARS).

The Institute will be entitled to following benefits:

The IBOARS can initially review research papers of their institute and recommend them to publish with respective journal of Global Journals. It can also review the papers of other institutions after obtaining our consent. The second review will be done by peer reviewer of Global Journals Incorporation (USA) The Board is at liberty to appoint a peer reviewer with the approval of chairperson after consulting us.

The author fees of such paper may be waived off up to 40%.

The Global Journals Incorporation (USA) at its discretion can also refer double blind peer reviewed paper at their end to the board for the verification and to get recommendation for final stage of acceptance of publication.

The IBOARS can organize symposium/seminar/conference in their country on behalf of Global Journals Incorporation (USA)-OARS (USA). The terms and conditions can be discussed separately.

The Board can also play vital role by exploring and giving valuable suggestions regarding the Standards of "Open Association of Research Society, U.S.A (OARS)" so that proper amendment can take place for the benefit of entire research community. We shall provide details of particular standard only on receipt of request from the Board.

The board members can also join us as Individual Fellow with 40% discount on total fees applicable to Individual Fellow. They will be entitled to avail all the benefits as declared. Please visit Individual Fellow-sub menu of GlobalJournals.org to have more relevant details.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

After nomination of your institution as "Institutional Fellow" and constantly functioning successfully for one year, we can consider giving recognition to your institute to function as Regional/Zonal office on our behalf.
The board can also take up the additional allied activities for betterment after our consultation.

The following entitlements are applicable to individual Fellows:

Open Association of Research Society, U.S.A (OARS) By-laws states that an individual Fellow may use the designations as applicable, or the corresponding initials. The Credentials of individual Fellow and Associate designations signify that the individual has gained knowledge of the fundamental concepts. One is magnanimous and proficient in an expertise course covering the professional code of conduct, and follows recognized standards of practice.

Open Association of Research Society (US)/ Global Journals Incorporation (USA), as described in Corporate Statements, are educational, research publishing and professional membership organizations. Achieving our individual Fellow or Associate status is based mainly on meeting stated educational research requirements.

Disbursement of 40% Royalty earned through Global Journals : Researcher = 50%, Peer Reviewer = 37.50%, Institution = 12.50% E.g. Out of 40%, the 20% benefit should be passed on to researcher, 15 % benefit towards remuneration should be given to a reviewer and remaining 5% is to be retained by the institution.

We shall provide print version of 12 issues of any three journals [as per your requirement] out of our 38 journals worth $ 2376 USD.

Other:

The individual Fellow and Associate designations accredited by Open Association of Research Society (US) credentials signify guarantees following achievements:

- The professional accredited with Fellow honor, is entitled to various benefits viz. name, fame, honor, regular flow of income, secured bright future, social status etc.

- In addition to above, if one is single author, then entitled to 40% discount on publishing research paper and can get 10%discount if one is co-author or main author among group of authors.
- The Fellow can organize symposium/seminar/conference on behalf of Global Journals Incorporation (USA) and he/she can also attend the same organized by other institutes on behalf of Global Journals.
- The Fellow can become member of Editorial Board Member after completing 3yrs.
- The Fellow can earn 60% of sales proceeds from the sale of reference/review books/literature/publishing of research paper.
- Fellow can also join as paid peer reviewer and earn 15% remuneration of author charges and can also get an opportunity to join as member of the Editorial Board of Global Journals Incorporation (USA)
- • This individual has learned the basic methods of applying those concepts and techniques to common challenging situations. This individual has further demonstrated an in–depth understanding of the application of suitable techniques to a particular area of research practice.

Note :

"

- In future, if the board feels the necessity to change any board member, the same can be done with the consent of the chairperson along with anyone board member without our approval.
- In case, the chairperson needs to be replaced then consent of 2/3rd board members are required and they are also required to jointly pass the resolution copy of which should be sent to us. In such case, it will be compulsory to obtain our approval before replacement.
- In case of "Difference of Opinion [if any]" among the Board members, our decision will be final and binding to everyone.

"

Process of submission of Research Paper

The Area or field of specialization may or may not be of any category as mentioned in 'Scope of Journal' menu of the GlobalJournals.org website. There are 37 Research Journal categorized with Six parental Journals GJCST, GJMR, GJRE, GJMBR, GJSFR, GJHSS. For Authors should prefer the mentioned categories. There are three widely used systems UDC, DDC and LCC. The details are available as 'Knowledge Abstract' at Home page. The major advantage of this coding is that, the research work will be exposed to and shared with all over the world as we are being abstracted and indexed worldwide.

The paper should be in proper format. The format can be downloaded from first page of 'Author Guideline' Menu. The Author is expected to follow the general rules as mentioned in this menu. The paper should be written in MS-Word Format (*.DOC,*.DOCX).

The Author can submit the paper either online or offline. The authors should prefer online submission.Online Submission: There are three ways to submit your paper:

(A) (I) First, register yourself using top right corner of Home page then Login. If you are already registered, then login using your username and password.

(II) Choose corresponding Journal.

(III) Click 'Submit Manuscript'. Fill required information and Upload the paper.

(B) If you are using Internet Explorer, then Direct Submission through Homepage is also available.

(C) If these two are not conveninet , and then email the paper directly to dean@globaljournals.org.

Offline Submission: Author can send the typed form of paper by Post. However, online submission should be preferred.

Preferred Author Guidelines

MANUSCRIPT STYLE INSTRUCTION (Must be strictly followed)

Page Size: 8.27" X 11'"

- Left Margin: 0.65
- Right Margin: 0.65
- Top Margin: 0.75
- Bottom Margin: 0.75
- Font type of all text should be Swis 721 Lt BT.
- Paper Title should be of Font Size 24 with one Column section.
- Author Name in Font Size of 11 with one column as of Title.
- Abstract Font size of 9 Bold, "Abstract" word in Italic Bold.
- Main Text: Font size 10 with justified two columns section
- Two Column with Equal Column with of 3.38 and Gaping of .2
- First Character must be three lines Drop capped.
- Paragraph before Spacing of 1 pt and After of 0 pt.
- Line Spacing of 1 pt
- Large Images must be in One Column
- Numbering of First Main Headings (Heading 1) must be in Roman Letters, Capital Letter, and Font Size of 10.
- Numbering of Second Main Headings (Heading 2) must be in Alphabets, Italic, and Font Size of 10.

You can use your own standard format also.
Author Guidelines:

1. General,

2. Ethical Guidelines,

3. Submission of Manuscripts,

4. Manuscript's Category,

5. Structure and Format of Manuscript,

6. After Acceptance.

1. GENERAL

Before submitting your research paper, one is advised to go through the details as mentioned in following heads. It will be beneficial, while peer reviewer justify your paper for publication.

Scope

The Global Journals Inc. (US) welcome the submission of original paper, review paper, survey article relevant to the all the streams of Philosophy and knowledge. The Global Journals Inc. (US) is parental platform for Global Journal of Computer Science and Technology, Researches in Engineering, Medical Research, Science Frontier Research, Human Social Science, Management, and Business organization. The choice of specific field can be done otherwise as following in Abstracting and Indexing Page on this Website. As the all Global

Journals Inc. (US) are being abstracted and indexed (in process) by most of the reputed organizations. Topics of only narrow interest will not be accepted unless they have wider potential or consequences.

2. ETHICAL GUIDELINES

Authors should follow the ethical guidelines as mentioned below for publication of research paper and research activities.

Papers are accepted on strict understanding that the material in whole or in part has not been, nor is being, considered for publication elsewhere. If the paper once accepted by Global Journals Inc. (US) and Editorial Board, will become the copyright of the Global Journals Inc. (US).

Authorship: The authors and coauthors should have active contribution to conception design, analysis and interpretation of findings. They should critically review the contents and drafting of the paper. All should approve the final version of the paper before submission

The Global Journals Inc. (US) follows the definition of authorship set up by the Global Academy of Research and Development. According to the Global Academy of R&D authorship, criteria must be based on:

1) Substantial contributions to conception and acquisition of data, analysis and interpretation of the findings.

2) Drafting the paper and revising it critically regarding important academic content.

3) Final approval of the version of the paper to be published.

All authors should have been credited according to their appropriate contribution in research activity and preparing paper. Contributors who do not match the criteria as authors may be mentioned under Acknowledgement.

Acknowledgements: Contributors to the research other than authors credited should be mentioned under acknowledgement. The specifications of the source of funding for the research if appropriate can be included. Suppliers of resources may be mentioned along with address.

Appeal of Decision: The Editorial Board's decision on publication of the paper is final and cannot be appealed elsewhere.

Permissions: It is the author's responsibility to have prior permission if all or parts of earlier published illustrations are used in this paper.

Please mention proper reference and appropriate acknowledgements wherever expected.

If all or parts of previously published illustrations are used, permission must be taken from the copyright holder concerned. It is the author's responsibility to take these in writing.

Approval for reproduction/modification of any information (including figures and tables) published elsewhere must be obtained by the authors/copyright holders before submission of the manuscript. Contributors (Authors) are responsible for any copyright fee involved.

3. SUBMISSION OF MANUSCRIPTS

Manuscripts should be uploaded via this online submission page. The online submission is most efficient method for submission of papers, as it enables rapid distribution of manuscripts and consequently speeds up the review procedure. It also enables authors to know the status of their own manuscripts by emailing us. Complete instructions for submitting a paper is available below.

Manuscript submission is a systematic procedure and little preparation is required beyond having all parts of your manuscript in a given format and a computer with an Internet connection and a Web browser. Full help and instructions are provided on-screen. As an author, you will be prompted for login and manuscript details as Field of Paper and then to upload your manuscript file(s) according to the instructions.

To avoid postal delays, all transaction is preferred by e-mail. A finished manuscript submission is confirmed by e-mail immediately and your paper enters the editorial process with no postal delays. When a conclusion is made about the publication of your paper by our Editorial Board, revisions can be submitted online with the same procedure, with an occasion to view and respond to all comments.

Complete support for both authors and co-author is provided.

4. MANUSCRIPT'S CATEGORY

Based on potential and nature, the manuscript can be categorized under the following heads:

Original research paper: Such papers are reports of high-level significant original research work.

Review papers: These are concise, significant but helpful and decisive topics for young researchers.

Research articles: These are handled with small investigation and applications

Research letters: The letters are small and concise comments on previously published matters.

5.STRUCTURE AND FORMAT OF MANUSCRIPT

The recommended size of original research paper is less than seven thousand words, review papers fewer than seven thousands words also.Preparation of research paper or how to write research paper, are major hurdle, while writing manuscript. The research articles and research letters should be fewer than three thousand words, the structure original research paper; sometime review paper should be as follows:

Papers: These are reports of significant research (typically less than 7000 words equivalent, including tables, figures, references), and comprise:

(a)Title should be relevant and commensurate with the theme of the paper.

(b) A brief Summary, "Abstract" (less than 150 words) containing the major results and conclusions.

(c) Up to ten keywords, that precisely identifies the paper's subject, purpose, and focus.

(d) An Introduction, giving necessary background excluding subheadings; objectives must be clearly declared.

(e) Resources and techniques with sufficient complete experimental details (wherever possible by reference) to permit repetition; sources of information must be given and numerical methods must be specified by reference, unless non-standard.

(f) Results should be presented concisely, by well-designed tables and/or figures; the same data may not be used in both; suitable statistical data should be given. All data must be obtained with attention to numerical detail in the planning stage. As reproduced design has been recognized to be important to experiments for a considerable time, the Editor has decided that any paper that appears not to have adequate numerical treatments of the data will be returned un-refereed;

(g) Discussion should cover the implications and consequences, not just recapitulating the results; conclusions should be summarizing.

(h) Brief Acknowledgements.

(i) References in the proper form.

Authors should very cautiously consider the preparation of papers to ensure that they communicate efficiently. Papers are much more likely to be accepted, if they are cautiously designed and laid out, contain few or no errors, are summarizing, and be conventional to the approach and instructions. They will in addition, be published with much less delays than those that require much technical and editorial correction.

The Editorial Board reserves the right to make literary corrections and to make suggestions to improve briefness.

It is vital, that authors take care in submitting a manuscript that is written in simple language and adheres to published guidelines.

Format

Language: The language of publication is UK English. Authors, for whom English is a second language, must have their manuscript efficiently edited by an English-speaking person before submission to make sure that, the English is of high excellence. It is preferable, that manuscripts should be professionally edited.

Standard Usage, Abbreviations, and Units: Spelling and hyphenation should be conventional to The Concise Oxford English Dictionary. Statistics and measurements should at all times be given in figures, e.g. 16 min, except for when the number begins a sentence. When the number does not refer to a unit of measurement it should be spelt in full unless, it is 160 or greater.

Abbreviations supposed to be used carefully. The abbreviated name or expression is supposed to be cited in full at first usage, followed by the conventional abbreviation in parentheses.

Metric SI units are supposed to generally be used excluding where they conflict with current practice or are confusing. For illustration, 1.4 l rather than 1.4 × 10-3 m3, or 4 mm somewhat than 4 × 10-3 m. Chemical formula and solutions must identify the form used, e.g. anhydrous or hydrated, and the concentration must be in clearly defined units. Common species names should be followed by underlines at the first mention. For following use the generic name should be constricted to a single letter, if it is clear.

Structure

All manuscripts submitted to Global Journals Inc. (US), ought to include:

Title: The title page must carry an instructive title that reflects the content, a running title (less than 45 characters together with spaces), names of the authors and co-authors, and the place(s) wherever the work was carried out. The full postal address in addition with the e-mail address of related author must be given. Up to eleven keywords or very brief phrases have to be given to help data retrieval, mining and indexing.

Abstract, used in Original Papers and Reviews:

Optimizing Abstract for Search Engines

Many researchers searching for information online will use search engines such as Google, Yahoo or similar. By optimizing your paper for search engines, you will amplify the chance of someone finding it. This in turn will make it more likely to be viewed and/or cited in a further work. Global Journals Inc. (US) have compiled these guidelines to facilitate you to maximize the web-friendliness of the most public part of your paper.

Key Words

A major linchpin in research work for the writing research paper is the keyword search, which one will employ to find both library and Internet resources.

One must be persistent and creative in using keywords. An effective keyword search requires a strategy and planning a list of possible keywords and phrases to try.

Search engines for most searches, use Boolean searching, which is somewhat different from Internet searches. The Boolean search uses "operators," words (and, or, not, and near) that enable you to expand or narrow your affords. Tips for research paper while preparing research paper are very helpful guideline of research paper.

Choice of key words is first tool of tips to write research paper. Research paper writing is an art.A few tips for deciding as strategically as possible about keyword search:

- One should start brainstorming lists of possible keywords before even begin searching. Think about the most important concepts related to research work. Ask, "What words would a source have to include to be truly valuable in research paper?" Then consider synonyms for the important words.
- It may take the discovery of only one relevant paper to let steer in the right keyword direction because in most databases, the keywords under which a research paper is abstracted are listed with the paper.
- One should avoid outdated words.

Keywords are the key that opens a door to research work sources. Keyword searching is an art in which researcher's skills are bound to improve with experience and time.

Numerical Methods: Numerical methods used should be clear and, where appropriate, supported by references.

Acknowledgements: Please make these as concise as possible.

References

References follow the Harvard scheme of referencing. References in the text should cite the authors' names followed by the time of their publication, unless there are three or more authors when simply the first author's name is quoted followed by et al. unpublished work has to only be cited where necessary, and only in the text. Copies of references in press in other journals have to be supplied with submitted typescripts. It is necessary that all citations and references be carefully checked before submission, as mistakes or omissions will cause delays.

References to information on the World Wide Web can be given, but only if the information is available without charge to readers on an official site. Wikipedia and Similar websites are not allowed where anyone can change the information. Authors will be asked to make available electronic copies of the cited information for inclusion on the Global Journals Inc. (US) homepage at the judgment of the Editorial Board.

The Editorial Board and Global Journals Inc. (US) recommend that, citation of online-published papers and other material should be done via a DOI (digital object identifier). If an author cites anything, which does not have a DOI, they run the risk of the cited material not being noticeable.

The Editorial Board and Global Journals Inc. (US) recommend the use of a tool such as Reference Manager for reference management and formatting.

Tables, Figures and Figure Legends

Tables: Tables should be few in number, cautiously designed, uncrowned, and include only essential data. Each must have an Arabic number, e.g. Table 4, a self-explanatory caption and be on a separate sheet. Vertical lines should not be used.

Figures: Figures are supposed to be submitted as separate files. Always take in a citation in the text for each figure using Arabic numbers, e.g. Fig. 4. Artwork must be submitted online in electronic form by e-mailing them.

Preparation of Electronic Figures for Publication

Even though low quality images are sufficient for review purposes, print publication requires high quality images to prevent the final product being blurred or fuzzy. Submit (or e-mail) EPS (line art) or TIFF (halftone/photographs) files only. MS PowerPoint and Word Graphics are unsuitable for printed pictures. Do not use pixel-oriented software. Scans (TIFF only) should have a resolution of at least 350 dpi (halftone) or 700 to 1100 dpi (line drawings) in relation to the imitation size. Please give the data for figures in black and white or submit a Color Work Agreement Form. EPS files must be saved with fonts embedded (and with a TIFF preview, if possible).

For scanned images, the scanning resolution (at final image size) ought to be as follows to ensure good reproduction: line art: >650 dpi; halftones (including gel photographs) : >350 dpi; figures containing both halftone and line images: >650 dpi.

Color Charges: It is the rule of the Global Journals Inc. (US) for authors to pay the full cost for the reproduction of their color artwork. Hence, please note that, if there is color artwork in your manuscript when it is accepted for publication, we would require you to complete and return a color work agreement form before your paper can be published.

Figure Legends: Self-explanatory legends of all figures should be incorporated separately under the heading 'Legends to Figures'. In the full-text online edition of the journal, figure legends may possibly be truncated in abbreviated links to the full screen version. Therefore, the first 100 characters of any legend should notify the reader, about the key aspects of the figure.

6. AFTER ACCEPTANCE

Upon approval of a paper for publication, the manuscript will be forwarded to the dean, who is responsible for the publication of the Global Journals Inc. (US).

6.1 Proof Corrections

The corresponding author will receive an e-mail alert containing a link to a website or will be attached. A working e-mail address must therefore be provided for the related author.

Acrobat Reader will be required in order to read this file. This software can be downloaded

(Free of charge) from the following website:

www.adobe.com/products/acrobat/readstep2.html. This will facilitate the file to be opened, read on screen, and printed out in order for any corrections to be added. Further instructions will be sent with the proof.

Proofs must be returned to the dean at dean@globaljournals.org within three days of receipt.

As changes to proofs are costly, we inquire that you only correct typesetting errors. All illustrations are retained by the publisher. Please note that the authors are responsible for all statements made in their work, including changes made by the copy editor.

6.2 Early View of Global Journals Inc. (US) (Publication Prior to Print)

The Global Journals Inc. (US) are enclosed by our publishing's Early View service. Early View articles are complete full-text articles sent in advance of their publication. Early View articles are absolute and final. They have been completely reviewed, revised and edited for publication, and the authors' final corrections have been incorporated. Because they are in final form, no changes can be made after sending them. The nature of Early View articles means that they do not yet have volume, issue or page numbers, so Early View articles cannot be cited in the conventional way.

6.3 Author Services

Online production tracking is available for your article through Author Services. Author Services enables authors to track their article - once it has been accepted - through the production process to publication online and in print. Authors can check the status of their articles online and choose to receive automated e-mails at key stages of production. The authors will receive an e-mail with a unique link that enables them to register and have their article automatically added to the system. Please ensure that a complete e-mail address is provided when submitting the manuscript.

6.4 Author Material Archive Policy

Please note that if not specifically requested, publisher will dispose off hardcopy & electronic information submitted, after the two months of publication. If you require the return of any information submitted, please inform the Editorial Board or dean as soon as possible.

6.5 Offprint and Extra Copies

A PDF offprint of the online-published article will be provided free of charge to the related author, and may be distributed according to the Publisher's terms and conditions. Additional paper offprint may be ordered by emailing us at: editor@globaljournals.org .

Before start writing a good quality Computer Science Research Paper, let us first understand what is Computer Science Research Paper? So, Computer Science Research Paper is the paper which is written by professionals or scientists who are associated to Computer Science and Information Technology, or doing research study in these areas. If you are novel to this field then you can consult about this field from your supervisor or guide.

TECHNIQUES FOR WRITING A GOOD QUALITY RESEARCH PAPER:

1. Choosing the topic: In most cases, the topic is searched by the interest of author but it can be also suggested by the guides. You can have several topics and then you can judge that in which topic or subject you are finding yourself most comfortable. This can be done by asking several questions to yourself, like Will I be able to carry our search in this area? Will I find all necessary recourses to accomplish the search? Will I be able to find all information in this field area? If the answer of these types of questions will be "Yes" then you can choose that topic. In most of the cases, you may have to conduct the surveys and have to visit several places because this field is related to Computer Science and Information Technology. Also, you may have to do a lot of work to find all rise and falls regarding the various data of that subject. Sometimes, detailed information plays a vital role, instead of short information.

2. Evaluators are human: First thing to remember that evaluators are also human being. They are not only meant for rejecting a paper. They are here to evaluate your paper. So, present your Best.

3. Think Like Evaluators: If you are in a confusion or getting demotivated that your paper will be accepted by evaluators or not, then think and try to evaluate your paper like an Evaluator. Try to understand that what an evaluator wants in your research paper and automatically you will have your answer.

4. Make blueprints of paper: The outline is the plan or framework that will help you to arrange your thoughts. It will make your paper logical. But remember that all points of your outline must be related to the topic you have chosen.

5. Ask your Guides: If you are having any difficulty in your research, then do not hesitate to share your difficulty to your guide (if you have any). They will surely help you out and resolve your doubts. If you can't clarify what exactly you require for your work then ask the supervisor to help you with the alternative. He might also provide you the list of essential readings.

6. Use of computer is recommended: As you are doing research in the field of Computer Science, then this point is quite obvious.

7. Use right software: Always use good quality software packages. If you are not capable to judge good software then you can lose quality of your paper unknowingly. There are various software programs available to help you, which you can get through Internet.

8. Use the Internet for help: An excellent start for your paper can be by using the Google. It is an excellent search engine, where you can have your doubts resolved. You may also read some answers for the frequent question how to write my research paper or find model research paper. From the internet library you can download books. If you have all required books make important reading selecting and analyzing the specified information. Then put together research paper sketch out.

9. Use and get big pictures: Always use encyclopedias, Wikipedia to get pictures so that you can go into the depth.

10. Bookmarks are useful: When you read any book or magazine, you generally use bookmarks, right! It is a good habit, which helps to not to lose your continuity. You should always use bookmarks while searching on Internet also, which will make your search easier.

11. Revise what you wrote: When you write anything, always read it, summarize it and then finalize it.

12. Make all efforts: Make all efforts to mention what you are going to write in your paper. That means always have a good start. Try to mention everything in introduction, that what is the need of a particular research paper. Polish your work by good skill of writing and always give an evaluator, what he wants.

13. Have backups: When you are going to do any important thing like making research paper, you should always have backup copies of it either in your computer or in paper. This will help you to not to lose any of your important.

14. Produce good diagrams of your own: Always try to include good charts or diagrams in your paper to improve quality. Using several and unnecessary diagrams will degrade the quality of your paper by creating "hotchpotch." So always, try to make and include those diagrams, which are made by your own to improve readability and understandability of your paper.

15. Use of direct quotes: When you do research relevant to literature, history or current affairs then use of quotes become essential but if study is relevant to science then use of quotes is not preferable.

16. Use proper verb tense: Use proper verb tenses in your paper. Use past tense, to present those events that happened. Use present tense to indicate events that are going on. Use future tense to indicate future happening events. Use of improper and wrong tenses will confuse the evaluator. Avoid the sentences that are incomplete.

17. Never use online paper: If you are getting any paper on Internet, then never use it as your research paper because it might be possible that evaluator has already seen it or maybe it is outdated version.

18. Pick a good study spot: To do your research studies always try to pick a spot, which is quiet. Every spot is not for studies. Spot that suits you choose it and proceed further.

19. Know what you know: Always try to know, what you know by making objectives. Else, you will be confused and cannot achieve your target.

20. Use good quality grammar: Always use a good quality grammar and use words that will throw positive impact on evaluator. Use of good quality grammar does not mean to use tough words, that for each word the evaluator has to go through dictionary. Do not start sentence with a conjunction. Do not fragment sentences. Eliminate one-word sentences. Ignore passive voice. Do not ever use a big word when a diminutive one would suffice. Verbs have to be in agreement with their subjects. Prepositions are not expressions to finish sentences with. It is incorrect to ever divide an infinitive. Avoid clichés like the disease. Also, always shun irritating alliteration. Use language that is simple and straight forward. put together a neat summary.

21. Arrangement of information: Each section of the main body should start with an opening sentence and there should be a changeover at the end of the section. Give only valid and powerful arguments to your topic. You may also maintain your arguments with records.

22. Never start in last minute: Always start at right time and give enough time to research work. Leaving everything to the last minute will degrade your paper and spoil your work.

23. Multitasking in research is not good: Doing several things at the same time proves bad habit in case of research activity. Research is an area, where everything has a particular time slot. Divide your research work in parts and do particular part in particular time slot.

24. Never copy others' work: Never copy others' work and give it your name because if evaluator has seen it anywhere you will be in trouble.

25. Take proper rest and food: No matter how many hours you spend for your research activity, if you are not taking care of your health then all your efforts will be in vain. For a quality research, study is must, and this can be done by taking proper rest and food.

26. Go for seminars: Attend seminars if the topic is relevant to your research area. Utilize all your resources.

27. Refresh your mind after intervals: Try to give rest to your mind by listening to soft music or by sleeping in intervals. This will also improve your memory.

28. Make colleagues: Always try to make colleagues. No matter how sharper or intelligent you are, if you make colleagues you can have several ideas, which will be helpful for your research.

29. Think technically: Always think technically. If anything happens, then search its reasons, its benefits, and demerits.

30. Think and then print: When you will go to print your paper, notice that tables are not be split, headings are not detached from their descriptions, and page sequence is maintained.

31. Adding unnecessary information: Do not add unnecessary information, like, I have used MS Excel to draw graph. Do not add irrelevant and inappropriate material. These all will create superfluous. Foreign terminology and phrases are not apropos. One should NEVER take a broad view. Analogy in script is like feathers on a snake. Not at all use a large word when a very small one would be sufficient. Use words properly, regardless of how others use them. Remove quotations. Puns are for kids, not grunt readers. Amplification is a billion times of inferior quality than sarcasm.

32. Never oversimplify everything: To add material in your research paper, never go for oversimplification. This will definitely irritate the evaluator. Be more or less specific. Also too, by no means, ever use rhythmic redundancies. Contractions aren't essential and shouldn't be there used. Comparisons are as terrible as clichés. Give up ampersands and abbreviations, and so on. Remove commas, that are, not necessary. Parenthetical words however should be together with this in commas. Understatement is all the time the complete best way to put onward earth-shaking thoughts. Give a detailed literary review.

33. Report concluded results: Use concluded results. From raw data, filter the results and then conclude your studies based on measurements and observations taken. Significant figures and appropriate number of decimal places should be used. Parenthetical remarks are prohibitive. Proofread carefully at final stage. In the end give outline to your arguments. Spot out perspectives of further study of this subject. Justify your conclusion by at the bottom of them with sufficient justifications and examples.

34. After conclusion: Once you have concluded your research, the next most important step is to present your findings. Presentation is extremely important as it is the definite medium though which your research is going to be in print to the rest of the crowd. Care should be taken to categorize your thoughts well and present them in a logical and neat manner. A good quality research paper format is essential because it serves to highlight your research paper and bring to light all necessary aspects in your research.

Informal Guidelines of Research Paper Writing

Key points to remember:

- Submit all work in its final form.
- Write your paper in the form, which is presented in the guidelines using the template.
- Please note the criterion for grading the final paper by peer-reviewers.

Final Points:

A purpose of organizing a research paper is to let people to interpret your effort selectively. The journal requires the following sections, submitted in the order listed, each section to start on a new page.

The introduction will be compiled from reference matter and will reflect the design processes or outline of basis that direct you to make study. As you will carry out the process of study, the method and process section will be constructed as like that. The result segment will show related statistics in nearly sequential order and will direct the reviewers next to the similar intellectual paths throughout the data that you took to carry out your study. The discussion section will provide understanding of the data and projections as to the implication of the results. The use of good quality references all through the paper will give the effort trustworthiness by representing an alertness of prior workings.

Writing a research paper is not an easy job no matter how trouble-free the actual research or concept. Practice, excellent preparation, and controlled record keeping are the only means to make straightforward the progression.

General style:

Specific editorial column necessities for compliance of a manuscript will always take over from directions in these general guidelines.

To make a paper clear

· Adhere to recommended page limits

Mistakes to evade

- Insertion a title at the foot of a page with the subsequent text on the next page
- Separating a table/chart or figure - impound each figure/table to a single page
- Submitting a manuscript with pages out of sequence

In every sections of your document

· Use standard writing style including articles ("a", "the," etc.)

· Keep on paying attention on the research topic of the paper

· Use paragraphs to split each significant point (excluding for the abstract)

· Align the primary line of each section

· Present your points in sound order

· Use present tense to report well accepted

· Use past tense to describe specific results

· Shun familiar wording, don't address the reviewer directly, and don't use slang, slang language, or superlatives

· Shun use of extra pictures - include only those figures essential to presenting results

Title Page:

Choose a revealing title. It should be short. It should not have non-standard acronyms or abbreviations. It should not exceed two printed lines. It should include the name(s) and address (es) of all authors.

Abstract:

The summary should be two hundred words or less. It should briefly and clearly explain the key findings reported in the manuscript--must have precise statistics. It should not have abnormal acronyms or abbreviations. It should be logical in itself. Shun citing references at this point.

An abstract is a brief distinct paragraph summary of finished work or work in development. In a minute or less a reviewer can be taught the foundation behind the study, common approach to the problem, relevant results, and significant conclusions or new questions.

Write your summary when your paper is completed because how can you write the summary of anything which is not yet written? Wealth of terminology is very essential in abstract. Yet, use comprehensive sentences and do not let go readability for briefness. You can maintain it succinct by phrasing sentences so that they provide more than lone rationale. The author can at this moment go straight to shortening the outcome. Sum up the study, with the subsequent elements in any summary. Try to maintain the initial two items to no more than one ruling each.

- Reason of the study - theory, overall issue, purpose
- Fundamental goal
- To the point depiction of the research
- Consequences, including definite statistics - if the consequences are quantitative in nature, account quantitative data; results of any numerical analysis should be reported
- Significant conclusions or questions that track from the research(es)

Approach:

- Single section, and succinct
- As a outline of job done, it is always written in past tense
- A conceptual should situate on its own, and not submit to any other part of the paper such as a form or table
- Center on shortening results - bound background information to a verdict or two, if completely necessary
- What you account in an conceptual must be regular with what you reported in the manuscript
- Exact spelling, clearness of sentences and phrases, and appropriate reporting of quantities (proper units, important statistics) are just as significant in an abstract as they are anywhere else

Introduction:

The **Introduction** should "introduce" the manuscript. The reviewer should be presented with sufficient background information to be capable to comprehend and calculate the purpose of your study without having to submit to other works. The basis for the study should be offered. Give most important references but shun difficult to make a comprehensive appraisal of the topic. In the introduction, describe the problem visibly. If the problem is not acknowledged in a logical, reasonable way, the reviewer will have no attention in your result. Speak in common terms about techniques used to explain the problem, if needed, but do not present any particulars about the protocols here. Following approach can create a valuable beginning:

- Explain the value (significance) of the study
- Shield the model - why did you employ this particular system or method? What is its compensation? You strength remark on its appropriateness from a abstract point of vision as well as point out sensible reasons for using it.
- Present a justification. Status your particular theory (es) or aim(s), and describe the logic that led you to choose them.
- Very for a short time explain the tentative propose and how it skilled the declared objectives.

Approach:

- Use past tense except for when referring to recognized facts. After all, the manuscript will be submitted after the entire job is done.
- Sort out your thoughts; manufacture one key point with every section. If you make the four points listed above, you will need a least of four paragraphs.

- Present surroundings information only as desirable in order hold up a situation. The reviewer does not desire to read the whole thing you know about a topic.
- Shape the theory/purpose specifically - do not take a broad view.
- As always, give awareness to spelling, simplicity and correctness of sentences and phrases.

Procedures (Methods and Materials):

This part is supposed to be the easiest to carve if you have good skills. A sound written Procedures segment allows a capable scientist to replacement your results. Present precise information about your supplies. The suppliers and clarity of reagents can be helpful bits of information. Present methods in sequential order but linked methodologies can be grouped as a segment. Be concise when relating the protocols. Attempt for the least amount of information that would permit another capable scientist to spare your outcome but be cautious that vital information is integrated. The use of subheadings is suggested and ought to be synchronized with the results section. When a technique is used that has been well described in another object, mention the specific item describing a way but draw the basic principle while stating the situation. The purpose is to text all particular resources and broad procedures, so that another person may use some or all of the methods in one more study or referee the scientific value of your work. It is not to be a step by step report of the whole thing you did, nor is a methods section a set of orders.

Materials:

- Explain materials individually only if the study is so complex that it saves liberty this way.
- Embrace particular materials, and any tools or provisions that are not frequently found in laboratories.
- Do not take in frequently found.
- If use of a definite type of tools.
- Materials may be reported in a part section or else they may be recognized along with your measures.

Methods:

- Report the method (not particulars of each process that engaged the same methodology)
- Describe the method entirely
- To be succinct, present methods under headings dedicated to specific dealings or groups of measures
- Simplify - details how procedures were completed not how they were exclusively performed on a particular day.
- If well known procedures were used, account the procedure by name, possibly with reference, and that's all.

Approach:

- It is embarrassed or not possible to use vigorous voice when documenting methods with no using first person, which would focus the reviewer's interest on the researcher rather than the job. As a result when script up the methods most authors use third person passive voice.
- Use standard style in this and in every other part of the paper - avoid familiar lists, and use full sentences.

What to keep away from

- Resources and methods are not a set of information.
- Skip all descriptive information and surroundings - save it for the argument.
- Leave out information that is immaterial to a third party.

Results:

The principle of a results segment is to present and demonstrate your conclusion. Create this part a entirely objective details of the outcome, and save all understanding for the discussion.

The page length of this segment is set by the sum and types of data to be reported. Carry on to be to the point, by means of statistics and tables, if suitable, to present consequences most efficiently.You must obviously differentiate material that would usually be incorporated in a study editorial from any unprocessed data or additional appendix matter that would not be available. In fact, such matter should not be submitted at all except requested by the instructor.

Content

- Sum up your conclusion in text and demonstrate them, if suitable, with figures and tables.
- In manuscript, explain each of your consequences, point the reader to remarks that are most appropriate.
- Present a background, such as by describing the question that was addressed by creation an exacting study.
- Explain results of control experiments and comprise remarks that are not accessible in a prescribed figure or table, if appropriate.
- Examine your data, then prepare the analyzed (transformed) data in the form of a figure (graph), table, or in manuscript form.

What to stay away from

- Do not discuss or infer your outcome, report surroundings information, or try to explain anything.
- Not at all, take in raw data or intermediate calculations in a research manuscript.
- Do not present the similar data more than once.
- Manuscript should complement any figures or tables, not duplicate the identical information.
- Never confuse figures with tables - there is a difference.

Approach

- As forever, use past tense when you submit to your results, and put the whole thing in a reasonable order.
- Put figures and tables, appropriately numbered, in order at the end of the report
- If you desire, you may place your figures and tables properly within the text of your results part.

Figures and tables

- If you put figures and tables at the end of the details, make certain that they are visibly distinguished from any attach appendix materials, such as raw facts
- Despite of position, each figure must be numbered one after the other and complete with subtitle
- In spite of position, each table must be titled, numbered one after the other and complete with heading
- All figure and table must be adequately complete that it could situate on its own, divide from text

Discussion:

The Discussion is expected the trickiest segment to write and describe. A lot of papers submitted for journal are discarded based on problems with the Discussion. There is no head of state for how long a argument should be. Position your understanding of the outcome visibly to lead the reviewer through your conclusions, and then finish the paper with a summing up of the implication of the study. The purpose here is to offer an understanding of your results and hold up for all of your conclusions, using facts from your research and generally accepted information, if suitable. The implication of result should be visibly described. Infer your data in the conversation in suitable depth. This means that when you clarify an observable fact you must explain mechanisms that may account for the observation. If your results vary from your prospect, make clear why that may have happened. If your results agree, then explain the theory that the proof supported. It is never suitable to just state that the data approved with prospect, and let it drop at that.

- Make a decision if each premise is supported, discarded, or if you cannot make a conclusion with assurance. Do not just dismiss a study or part of a study as "uncertain."
- Research papers are not acknowledged if the work is imperfect. Draw what conclusions you can based upon the results that you have, and take care of the study as a finished work
- You may propose future guidelines, such as how the experiment might be personalized to accomplish a new idea.
- Give details all of your remarks as much as possible, focus on mechanisms.
- Make a decision if the tentative design sufficiently addressed the theory, and whether or not it was correctly restricted.
- Try to present substitute explanations if sensible alternatives be present.
- One research will not counter an overall question, so maintain the large picture in mind, where do you go next? The best studies unlock new avenues of study. What questions remain?
- Recommendations for detailed papers will offer supplementary suggestions.

Approach:

- When you refer to information, differentiate data generated by your own studies from available information
- Submit to work done by specific persons (including you) in past tense.
- Submit to generally acknowledged facts and main beliefs in present tense.

Administration Rules Listed Before Submitting Your Research Paper to Global Journals Inc. (US)

Please carefully note down following rules and regulation before submitting your Research Paper to Global Journals Inc. (US):

Segment Draft and Final Research Paper: You have to strictly follow the template of research paper. If it is not done your paper may get rejected.

- The **major constraint** is that you must independently make all content, tables, graphs, and facts that are offered in the paper. You must write each part of the paper wholly on your own. The Peer-reviewers need to identify your own perceptive of the concepts in your own terms. NEVER extract straight from any foundation, and never rephrase someone else's analysis.

- Do not give permission to anyone else to "PROOFREAD" your manuscript.

- Methods to avoid Plagiarism is applied by us on every paper, if found guilty, you will be blacklisted by all of our collaborated research groups, your institution will be informed for this and strict legal actions will be taken immediately.)
- To guard yourself and others from possible illegal use please do not permit anyone right to use to your paper and files.

Criterion for Grading a Research Paper (Compilation) by Global Journals Inc. (US)

Please note that following table is only a Grading of "Paper Compilation" and not on "Performed/Stated Research" whose grading solely depends on Individual Assigned Peer Reviewer and Editorial Board Member. These can be available only on request and after decision of Paper. This report will be the property of Global Journals Inc. (US).

Topics	Grades		
	A-B	**C-D**	**E-F**
Abstract	Clear and concise with appropriate content, Correct format. 200 words or below	Unclear summary and no specific data, Incorrect form Above 200 words	No specific data with ambiguous information Above 250 words
Introduction	Containing all background details with clear goal and appropriate details, flow specification, no grammar and spelling mistake, well organized sentence and paragraph, reference cited	Unclear and confusing data, appropriate format, grammar and spelling errors with unorganized matter	Out of place depth and content, hazy format
Methods and Procedures	Clear and to the point with well arranged paragraph, precision and accuracy of facts and figures, well organized subheads	Difficult to comprehend with embarrassed text, too much explanation but completed	Incorrect and unorganized structure with hazy meaning
Result	Well organized, Clear and specific, Correct units with precision, correct data, well structuring of paragraph, no grammar and spelling mistake	Complete and embarrassed text, difficult to comprehend	Irregular format with wrong facts and figures
Discussion	Well organized, meaningful specification, sound conclusion, logical and concise explanation, highly structured paragraph reference cited	Wordy, unclear conclusion, spurious	Conclusion is not cited, unorganized, difficult to comprehend
References	Complete and correct format, well organized	Beside the point, Incomplete	Wrong format and structuring
