## Theory of Everything

By Prince Jessii

*Trasker Institute of Scientific Research*

**Abstract-** After secretly working on several experiments and observations, Prince Jessii combines all the outcomes and results to present the “theory of everything” which is released this year ahead of the start of a new decade [2020] to open the eyes of everyone to the world of science [physics] and to release an urgent information. This theory tells the world what made them exist, how they existed, how they can still exist. It isn't fair if humans die every day with all the unfortunate events happening and still to come, when science [physics] is there to save them and prevent all unfortunate events from happening.

**Keywords:** GoD, dark energy, dark matter, energy, matter, space, dimension, universe.

# Theory of Everything

Prince Jessii

**Abstract-** After secretly working on several experiments and observations, Prince Jessii combines all the outcomes and results to present the “theory of everything” which is released this year ahead of the start of a new decade [2020] to open the eyes of everyone to the world of science [physics] and to release an urgent information. This theory tells the world what made them exist, how they existed, how they can still exist. It isn't fair if humans die every day with all the unfortunate events happening and still to come, when science [physics] is there to save them and prevent all unfortunate events from happening.

**Keywords:** GoD, dark energy, dark matter, energy, matter, space, dimension, universe.

## I. INTRODUCTION

“The theory of everything” is written to avoid high technical language and soundness to enable everyone in the world to understand it. All the results and outcomes of my observations and experiments are [1], [2], [3] in the reference list, you have to read it according to the sequence [1-2-3] before proceeding to this theory. If not done, you won't understand this theory.

*Dear Universe,*

This theory is the summary of all the results of my experiments and observations conducted in the environment of our universe.

It all started when I got attached to the space around us which I started observing closely. With the nature of space around us being different from that which surrounds the planets, I began to wonder the cause of this, at that moment you might say that space can be split or be different, but i eventually realized that it was gravity which is also space, but in its opposite form. Gravity was not understood properly, but it was explained in a proper way in reference [3]. You can imagine why everything in free fall is attracted to the center of the earth, there's a space fabric at the center/core of a planet and it's also the strongest [original] form of space which can be found at the outer space and with the fact that space cannot be split i.e there's only one environment of space placed in the universe of a magnitude of  $[1.50 \times 10^{10}]$ , gravity can now arise to reduce this magnitude of space in certain areas but it's the same thing acting on itself [read reference [1] and [3] ]. However, i started observing photons that comes from the sun which i can also see with my bare eyes with absolute focus but the light

seems to out-shine my eyes which allows me to see it for few seconds/minutes, the details of this light where already discovered by great scientists/physicist in the past, so i didn't bother experimenting on it, i just trusted their details, so i took the constants related to them. But there was another light, and this one comes and goes, it required another type of focus to see this one, the mystery about this light is that you can never see it where the rays of the sun appear, it was like the light from the sun outshines the other and it's brightness depends on how dark a place is i.e a room without light. I'm sorry if you don't see this, but you'll eventually know why and howi saw the light, some other humans see it too but don't know what it is, but scientists in the past observed this light and gave it a name, I'll address it as that name. So there are two lights, one is visible to everyone; the other isn't yet visible to humans at this moment. By observations, i realized that both lights move at the same speed, so i took the speed of light constant ( $3 \times 10^8$ ) so serious. Now after several observations and experiments with these lights, coupled with the GOD factor, i present your theory of everything which originates from these two lights and space [gravity].

My experiment and observations might not be enough for most people outside the scientific environment, so I'll use some verses from the holy book to boost your understanding in order to explain our universe from the point of creation to its end.

## II. DISCUSSION

### a) *The Big Bang*

All these, the reason you exist, everything around you, they all started from your creator and i can't tell you his face but i can say that he is made up of two lights and exist with both lights merged as shown in figure 1 below. His light is abundant and large enough to build a universe, as both lights are merged, it can also be unmerged. Surprisingly, he a scientist in a way and he wanted to create people [humans] who will serve and praise him all day and also be part of his light. But there one law, the ultimate law that governs this universe even he can't break or change. He knows that he is made up two lights and that one is superior and the other needs the superior to survive i.e. the life-span of the other depends on the superior. The superior is Dark-Energy and the other is Energy the inferior. Dark Energy is a pure bright white light and Energy is exactly the picture of light you see from the sun. Because his inferior light can fade, it was merged with the superior to

*Author:* Trasker Institute of Scientific Research.  
*e-mail:* princejessii8@gmail.com

make it exist forever and space is the point where these two lights merge, as shown in (figure 1). This means your creator is made up of the two lights with space.

He created everything [universe] under 7days beneath where he stays; he created earth first and then dropped it into the universe which he created later. From the holy book, he said "Let there be light" on the first day (Genesis 1), that light was dark-energy; this was done to obey the law. By creating a dimension made up of the inferior light, a dimension of the superior light must be created first and merged with it in order for the inferior dimension to exist forever. Besides creating new things every day for the 7days, the big bang of the universe happened on the third day where his inferior light was used to create the universe. By placing his

superior light first, he allowed his inferior light to cool on top of the superior light thereby forming the universe which contains all planetary bodies, everything in the universe that you see at the moment are the solidified form of the inferior light. Because they are his light, this could be done just by him thinking of what to create, the placement of these two lights created both dimensions PS merged together. The humans was all he had in mind, he just wanted to create children [humans] which will be part of his light. However, he was just worried about the humans obeying the ultimate law.

The Ultimate Law says "To keep the inferior light, it must become the superior light, in other words, it must be merged with the superior light".

Figure 1

Merging the two lights is a process to follow and because they are his lights, only he can provide a means which can be done automatically and also the means in which it can be reversed. But he wanted to test humans with a game; this was his thought at that moment.

"I want to test my creation [Humans], and I'll create them in my image [with the inferior light and superior light] and I'll provide them with a means of merging both lights automatically, but I'll also provide a means of unmerging both light dimensions as a

distraction. If the first human I'll create decides to unmerge both dimensions, he and his generations have to figure out how to merge it back which means I'll have to provide a clue for them. I'll create the stars and they'll be the only body that will still possess my inferior light itself, the humans will have to figure out the puzzle early enough, else everything made of my inferior light will eventually fade and disappear in space, then i can start this creation process all-over again."

The creation of the first human was done on the sixth day and later the first man chose to unmerge both

dimensions instead of merging his lights which he was created with. From the holy book [Genesis], he provided the means of merging as the tree of life and the means of unmerging the dimensions as the tree of knowledge of good and evil, when the first human ate from the tree of knowledge of good and evil, his eyes were opened, this was because both dimensions were unmerged and he was not yet merged with the superior light, so he could only see the light his body was made with and the other had to be invisible. Man can only see the superior light if he merges his body with the superior light.

The inferior light solidified to form land, air, water, vegetation, humans, animals etc. these were the essentials man needed to survive and increase the life-span of his body which is also a solidified form of the inferior light, to keep it to exist on a temporary basis. The land consists of natural resources which have been explored by man and are now used to produce more advanced type of matter to enhance living. Man advanced from local and natural means to a technological way, all with the help of the inferior light. Quantum mechanics, relativity, electromagnetism, waves, electricity, wind energy, etc, are all the physics of the inferior light with space. We've only succeeded in studying 50% of physics, the physics of the superior light was left out and sometimes when people or things [magic] defy the laws of physics, it feels like the laws aren't correct, but it wasn't known that those things that are done are also part of physics [the other 50%].

### III. METHODS

#### a) 137

After creating the universe, man is to multiply and fill the universe but wasn't aware of this game.

The code of the game he wanted humans to play was 137 which represents days in creation [read reference 3], another code similar to this is 666. From the Holy Book [Revelation 13;18], it says "this calls for wisdom, if anyone has insight, let him calculate the number of the beast for it is man's number, his number is 666".

The three spaces \_\_\_ has to be filled to form a code with the days in creation. Before then, we couldn't answer this question, but this paper gives you the knowledge of this. It's 666 because man was created on the sixth day and because it talks about just a particular day, to form the code the three spaces had to be filled with 6, but 137 talks about two days, so after inserting the two days, the total number of days had to be inserted to express it properly.

Our universe is made up of both lights. Using the clue, the stars were made to play the game of 137 to light-up dimension P and man is expected to play the game and light-up dimension S so that both dimensions can merge and be one [Read reference 3], but man has refused to play the game ever since the first man made

the mistake. Our creator [the only man to complete the game] had to be born in form of a man to teach us how to play and complete the game but we've still ignored him [John 1;9.....] ["The true light that gives light to every man was coming into the world"]. We take it for granted but the fact is that, we think 13.7 billion years has passed and his inferior light has not faded completely.

Remember, space is related to time [Read reference 2] and the nature of space where he stays is not the same on earth, 1000 years on earth is equal to 1 day were he stays, this means that if he's depending on the days it'll take for it to fade, ours will extend to more years. Our creator might or will decide to force it to fade before its time resulting into the apocalypse.

The fact that people die every day is enough to prove that the light fades. What are we waiting for? *Do we want the apocalypse to take us?*

NB; how to play the game is deeply religion but also science. I'll publish a book concerning that.

I present the summary of my experiments with the help of reference [1] [2] [3]

My experiment resulted into two fine structure constants with each representing each dimensions, I also discovered that the inverse of these fine structure constants is the visibility value of each of the dimensions at the point of unmerging PS and that one dimension "S" was lacking the game of 137. This is the visibility constant of the dimensions as regards to the electron [Matter]

However, let me lead you to some explanations before i use my experiments and calculations to present the theory of everything

We have two lights, Dark-Energy and Energy

We have two solidified form of the lights, Dark-Matter and Matter

We have space [gravity] which is associated with time to give space-time These 5 forms are everything in the universe i.e everything in the universe must be categorized or related as one of these forms.

Dark Energy and Dark Matter are for Dimension S and Energy and Matter are for Dimension P, Space [gravity] is the merging point of both dimensions

I presented Dark Energy as  $E_d$  and Energy as E, Dark-Matter as  $M_d$  and Matter as M, Space as S,

In reference [3], I presented the values of Dark-Energy and Dark-Matter as constants.

Matter and Energy cannot be defined as constants but their quantum state can be defined as constants. However, the constants of dark energy and dark matter are the same for both its higher state and quantum state.

### IV. RESULTS

#### a) *Theory of Everything*

From reference 3, our universe is all about the lights and the absorption of the lights by its

corresponding solidified form, and the main explanation of the equation  $1/\alpha_s + 137 = 1/\alpha_p$  i.e.  $1.388 + 137 = 138.8$  is the clue itself.

The stars which are the bigger state of an electron are the clue and as many as they are, they've played their game making dimension P to be visible, man times the number of stars existing is expected to play the game to make dimension S visible. With that, both dimensions will merge and dimension P won't be able to fade.

However, the current value of our universe is  $138.8/1.388 = 100$  and the original value of our universe is 1 i.e. when both dimensions merge  $138.8/138.8 = 1$

Keep this in mind; you'll see the effect with this illustration.

NB; the values and details of the constants in the representation below are in reference [3] and also remember that a solidified form of a light can only absorb the light which it was made with, to absorb the other light, it has to be as an attachment with the other solidified form (Read Reference 3).

Hang on and gradually follow the illustration below, I'll explain after it.

9. To solve the tendency issue; we use its fellow as an attachment.

$$e \xrightarrow{M_d} E_d$$

$$1.60 \times 10^{-19} \times 50 \times 4.5 \times 10^{18} = 36 \text{ (Quantum State)}$$

Absorption of the superior light by the solidified form of the Inferior light.

10. The (Higher state) of the previous will be  $M \times [M_d \times c]^2$   
i.e  $M \times [2.25 \times 10^{20}]$

$$M_d \xrightarrow{e} E$$

$$50 \times 1.60 \times 10^{-19} \times 4.5 \times 10^{16} = 0.36 \text{ (Quantum State)}$$

Absorption of the inferior light by the solidified form of the superior light.

The (Higher state) will be  $M_d \times [M \times c]^2$   
i.e  $50 \times [M \times (3 \times 10^8)]^2$

## V. EXPLANATION

Think of the theory of everything as the brain and heart of science [physics], you just have to connect all branches to link with it. When i talk about light in this paper or previous, it means the original lights used in creation and they are just two. Let's start with their solidified forms.

In physics, matter is expressed as a constant in quantum states, the higher states are combination of the different quantum states which results in higher states not been expressed as constants. For example, your body is made up of electrons; your body (matter) can't be expressed as a constant because the amount of electrons in your body is not the same in another body. As a result, we use the mass of the particular matter as a higher state but it is not constant because it changes and differs from other matter. The mass of the matter will now replace the "M" which represents matter in the equations it appeared in the illustration above. But it's the reverse in the case of dark matter; it is constant in both quantum and higher state, e.g. the dark matter that gives life to ants is the same value in humans, this is one of the properties that makes it superior. The value of dark matter at higher state will now be used for its quantum state. As a result, both solidified forms can't have similar values at both quantum and higher states but their lights itself can have similar values at quantum state. However, from the illustration above, the value of dark energy is gotten from a higher state as  $4.5 \times 10^{18}$  and it has this same value for its quantum state. Therefore we use its value at higher state for its quantum state. During the big bang, the inferior light solidified mainly into planetary bodies that contained the combination of any of these; land, water, gases, vegetation, creatures. The land contains natural resources including chemical elements. Man has now experimented on these things to produce more matter. Speaking about the process of the big bang and also production of matter by man, the photons from the light solidified into electrons, but as a result of forming different kinds of matter, electrons will have to deviate from the original solidified form to adjust to the requirements for forming a particular matter. This is the

reason why some kinds of electron would not absorb the inferior light on their own. But some electrons deviate and still tend to absorb the light. This is where the photoelectric effect comes in to explain; electrons have deviated, which means to absorb the light, the light has to adjust and impart at least the required amount of energy for the electron to be liberated to ensure absorption. It's the reverse in the case of dark-matter and the superior light (dark energy). In this case, the light can't be adjusted, only the dark matter, this is one of the properties that makes it superior.

However, these electrons can go as far as deviating to form an anti-electron (positron) which is the limit for deviation; to deviate to the opposite form of the exact value of  $(1.60 \times 10^{-19}C)$  but this time it is positive, its higher state is the anti-matter. In this case, a minus sign (-) can be put into the equations of energy and matter e.g.  $(E=-Mc^2)$  in the case were an anti-matter is involved. On the other hand, dark matter can go as far as deviating to the opposite form of (50), this is where i'll have to bring religion which is also science. For your information, in every game, there are obstacles to prevent your mission/aim. In the game of 137, the fallen angels are here in this world to stop our dark matter from absorbing the superior light resulting into "not playing the game". During their era, they were made to become part of the superior light automatically making them positive angels and were eventually given power to cause negative effects while absorbing the superior light which is a positive process just for the purpose of preventing man from playing the game. They are the only reason why one's dark-matter will deviate to the exact opposite form. If they or their effect collides with your dark-matter, dark-matter starts deviating to a negative form and the only way to absorb the superior light is to adjust back to the original form of your dark-matter, else it will remain in an opposite state which is negative and the absorption will not count.

*NB;* The elementary particles (quarks, leptons, mesons, neutrinos etc.) are all related to the [electron, proton and neutron]. This theory accounts for quantum state of matter as the electron which is the approved limit, this is why its brother [proton] also has the same charge

$[1.60 \times 10^{-19}]$  and its other (neutron) has no charge. The electron, proton, neutron are the approved quantum state, splitting further is not necessary in explaining TOE, it's just for the fun and enjoying physics.

Figure 2

Figure 2 is a star, its energy causes radiation which consists of photons, and each photon has an energy constant of  $4.5 \times 10^{16}$ . However, there are literally filters [ozone layer] at the surface of planets and these filters were created to reduce the intensity of the energy [radiation] from these photons by filtering to produce different rays [with wavelengths and frequencies] to build the electromagnetic spectrum.

Furthermore, without going deeply into electromagnetism, we have already discovered forms of energy [light] and they are made from the inferior light, the different kinds of energy [lights] also move as a collection of discrete wave packets (photons) and their energy will still be represented as "E" and this energy of a single photon is given as  $[E=hf]$  and  $f$ , frequency is given as the speed of light/wavelength  $[c/\lambda]$  according to Planck-Einstein. But it is not referring to the original inferior light, each photon from the original inferior light in which the stars possess has energy of a value of  $E=[4.5 \times 10^{16}]$  as a constant, i.e. the photon energy from the inferior light itself is constant. Also, when an electron emits a photon, the photon energy can be calculated as  $[E=hf]$ .

Discovering dark energy as the "light of God" and also "the superior", the energy from each photon has a constant of  $E_d = 4.5 \times 10^{18}$  and just like matter can be transformed back to its inferior light [energy] as  $E=Mc^2$ , dark matter [quantum and higher] transforming into its light [dark energy] as  $E_d = M_d c^2$  will still result into a constant  $[4.5 \times 10^{18}]$ . This is why dark energy is also found to be  $4.5 \times 10^{18}$  in a high state  $[S \times c]$

*The Inferior and Superior Light;* Energy is Dark-Energy when they're merged, but when they're not merged; energy takes the form of  $(4.5 \times 10^{16})$ . This means that for energy to exist on its own, it must deviate from the value of dark-energy by 100; this was the same rule that was applied when both light dimensions in our universe were

unmerged causing both visibility constants to differ by 100. However, taking the form of dark-energy, we get both energies as  $E_d = S \times c$  or  $E \times 100 = E_d = S \times c$ . Like i said before, "Space is the merging point, everything answers to it". Getting one of the lights from the space fabric constant (S) and the speed of light (c) shows that dark energy is the superior and energy constant can be gotten as the inferior by dividing dark energy by 100.

All these is just like a scenario where you pour water in a high concentrated juice then the water being poured becomes the juice itself (light inside light) and a scenario where you put a solidified juice (ice juice) into juice, it melts to become the juice again (matter becomes its corresponding light) and if you want a solidified water (ice) to become a solidified juice (ice juice), you allow the ice to melt to water then you pour into a high concentrated juice and allow it cool to form a solidified juice, the solidified water then becomes the solidified juice. (Matter becomes dark matter) and so on. For example, the stars were matter and became their light which they were made of, we were wondering where the energy from a death star goes; they all go back to mix up [merge] with the dark energy of your creator waiting on the other side for absorption through space which i explained in reference [3]. However, absorbing the light does not mean "to be consumed by the light". To be consumed by the light is another case, it happens when a matter is closer to the light; I'll use this to explain the concept of black holes.

Some planets were made as a solidified form of the light, apart from solidifying; these planets [the stars] were also made to absorb to become the light itself by its electrons absorbing photons from the light that formed it. Just like cancer cells influence some normal cells to become cancer cells, some electrons might be found not absorbing the light. After some time, they influence other electrons to be like them which are not absorbing, when majority of these electrons of a star are not absorbing, it results into the death of a star and the electrons are being consumed by the light. The light [energy] will rest on space and tear/rip the space fabric to form a hole, this hole enables it to go back to mix up with dark-energy on the other side. However, the space fabric repairs itself after some time and it'll be like nothing happened there, you can't see it mixing up yet, but you'll feel the big presence of dark energy on an area were a star died. The bottom line is that all stars will die one day.

It was observed that dark energy is the reason behind the expansion of the space fabric on the outer space  $[E_d = S \times c]$ , but it's a sign, that the space fabric will eventually deviate [expand] to a magnitude that can't hold the planetary bodies at a point on the outer space, just like the magnitude on earth or other planets. As a result, stars will begin to collide with planets of their size or small stars could fall inside big planets and the

energy of a big star like the sun can consume several planets. This is a hint to how everything we see will fade completely if both dimensions are not merged on time.

However, let me give you a shocking clue from the holy book [Revelation 21;23]....*"The city does not need the sun or moon to shine on it, for the light of God gives it light"*. This verse is to boost your knowledge that the stars were not needed for their purpose, they were just a clue for the game and the other light is to serve that purpose. I said in reference 3 that if man times the number of stars plays and completes the game, both dimensions will merge and the value of man's universe will be 1, this means that the value of the inferior light [ $4.5 \times 10^{16}$ ] will take the value of the superior light [ $4.5 \times 10^{18}$ ] and the same is applied for their solidified forms [electron and dark-matter]. However, if man times the number of stars decides to merge their dark matter with their matter, this will make both dimensions to merge and many constants will vanish for good and the only constants that will remain are the constants related directly to the superior light [S, c,  $E_d$ ,  $M_d$ , Light mode S], these are the ultimate constants.

## VI. CONCLUSIONS

New discoveries and inventions on new sources of energy will keep coming, but I've said it before that all things that your eyes can see are made up of the inferior light i.e. the light from the sun. Therefore, as a scientist, if you wake up one day and eventually discover how to generate or produce energy from things like saliva, urine, sperm etc., to power up a machine or something else, it shouldn't be a surprise to you, they are all made from that light [energy] and they're just waiting for you to discover how to use them. "Nothing is a waste".

Some of the religious people that are aware of the apocalypse through the holy book have already doubted that it'll come because of the amount of time that has passed, but I tell you, ever since I cracked the blueprint of the universe, my mindset changed with fear and we have a very big problem to solve, our universe that we see is fading. If you think your loved ones that have died in the past are gone for good, you're wrong, their solidified inferior light were forced to fade before its time or some reached the life-span and faded and their superior light part exist around which you can't see them because you've not merged. If found that you didn't complete the game, then your dark matter part will be subjected to the value [0.36] in the illustration. That is similar to the lake of fire that you hear, if put inside, your dark matter will absorb the inferior light and be part of it, that's the only thing that can wipe you out from existence to fade for good. In addition, I conducted a research with dark energy and cancer cells, and I say that dark energy is the ultimate cancer cure; the only way cancer can be cured permanently is to apply the reset button, which is the only thing they respect [the light that created the light that created them]. I

witnessed a complete curing of a cancer patient [anus] with dark energy and the cancer cells transformed into normal cells in seconds just like pressing a reset button in your phone. The time to put that smile on the faces of cancer patients is here. This is the same for other diseases.

Finally, if you follow the sequence of the light in this theory, absorption of light from its solidified form, absorption of the opposite light, deviating from negative to positive, keeping the light from fading temporary and permanently and so on, you will understand this universe. This is the background of every discovery and invention in this universe. It is how your city, phones and laptops etc are powered, it is how electricity and electromagnetism was discovered, it is what made different forms of matter and energy to exist, it is the father of all laws of physics and science, it is what made you exist, it helps you discover ways to treat and recover from your diseases and so on, just keep naming it. But it tells how everything ends and how you can prevent it. Generally, the message from this theory is that "All things are related"

From the holy book [John 1;3]....*"Through him all things were made; without him nothing was made that has been made. In him was life, and that life was the light of men. The light shines in the darkness, but the darkness has not understood it"*.

NB; "Whatever process you follow to "self-absorb" the superior light is the one and only true religion, regardless of whatever name you give it"

After reading this paper, you should have understood that verse.

Besides the constants h, c, k, e,  $\alpha_p$  and formula [ $E=Mc^2$ ], all theories, constants and values in this paper are novel and they're created and proposed by Prince Jessii. They all originate from reference [1, 2 & 3]

*Brief Information:* The causes of the climate change we're experiencing now are an attempt to force the inferior dimension to fade before its time, please stop all causes immediately. If we must play the game, we need to buy some time.

Also, everyone is required to play the game of 137 in order to save the universe; the fate of our universe is in our hands. I've played my part as a scientist to deliver this theory to the world.

## ACKNOWLEDGMENT

I'm grateful to God Almighty for guiding me through the blueprints and creating this theory for the world.
