Spark of First Life and Consciousness

Chandra Prakash Trivedi

Abstract- The electrostatic force is the force that governs the motion of the elementary particles, which causes them to aggregate or collide in various ways with oxidation and reduction with the transfer of electrons in the primordial soup. The vibratory movement of the charged ions with equal and opposite wavelengths developed a dynamo streaming in extreme anaerobic.

It has been observed in the ultra-resolution image that one purine and one pyrimidine base differing only in Nitrogen are complimentary to each other shed with cosmology. The elementary particles adhered to space, and the sound of vibration touched, press the mark, and rebound. The colliding protons decayed into hadron jets, and the electrons converted them into electric vibrations to join the purine and pyrimidine base in series with mass.

The electrostatic interaction between the charged ions of the water with dehydration separated the hydrogen bond. It has formed a covalent Hydrogen bond between the purine and pyrimidine complementary base. The complementary wavelength of the hydrogen bond activated the nucleotide pair with the transfer of electrons. The hydrogen triple bond converts into the double bond and reunited on the opposite side with a change in the electron with oxidation and reduction in the chain with the first genetic code and amino acid in series. The synthesized chromosomes are divided into four with the first prokaryotic cell. Life appears with the streaming of the protoplasm and disappears with the aging of the cell. The complementary wavelength of the hydrogen triple bond of the nucleotide pair led to the development of from generation to generation with new life.

Keywords: spark of life, phonon, slime soup.

I. INTRODUCTION

Origin of life consciousness is a great puzzle, life appears with the streaming of the protoplasm and disappears with the aging of the cell body. I have traced the roots of life consciousness in pre-cosmic conditions. The phonon wave appeared first and activated the dark matter with a blast and light. The phonon and photon run parallel with equal and opposite wavelengths. The purine and pyrimidine bases differ only in Nitrogen shed-like bullets with incandescent gaseous clouds with phonon photon interaction with the vibrations. The electrostatic force governs the motion of the elementary particles, which caused them to aggregate or collide in various ways with oxidation and reduction with the transfer of electrons in the primordial soup. It has activated the purine and the pyrimidine complementary base pair with resonance.

The electrostatic interaction between the charged ions of the water with dehydration separated

the hydrogen bond. It has formed a covalent Hydrogen bond between the purine and pyrimidine complementary base. The complementary wavelength of the hydrogen bond activated the nucleotide pair with the transfer of electrons. The hydrogen triple bond converts into the double bond and reunited on the opposite side with a change in the electron with oxidation and reduction in the chain with the first genetic code and amino acid in series. The synthesized chromosomes are divided into four with the first prokaryotic cell. Life appears with the streaming of the protoplasm and disappears with the aging of the cell. The complementary wavelength of the hydrogen triple bond of the nucleotide pair led to the development from generation to generation with new life.

II. EARLY WORK

The Russian Chemist A.I. Oparin 1922 and English Geneticist J.B.S. Haldane 1928 first conceived of the theory of the pre-biotic origin of life. DNA Watson and Crick 1953, Darwin Origin of Species 1859, Life evolved from the single DNA with Genetic recombination and cell division. How did the first Life begin? NASA researchers noticed polycyclic aromatic hydrocarbons (PAHs) in meteorites. Extra hydrogen or oxygen called Quinone has the potential for the origin of life.

Higgs field 1914, phonon scattered the photon in a crystal Lie et al 2014, Einstein 1923 there must be two equal and opposite forces. The photon is the smallest unit of light, and the immortal phonon is the smallest unit of the sound wave vibration connected at the molecular level with equal and opposite wavelengths.

The DNA with photon-phonon interaction is universally present. Hence its complimentary resonant wave blackouts radio communications on the earth and the protons damage human beings in space if not protected properly. Because the entry of radiation rays with protons checked by the magnetosphere and ozone layer and complimentary resonance finds its counterpart protons astronaut human in space.

III. LIFE ON THE EARTH

The incandescent gaseous cloud cooled down with time and the movement of the molten mass generated the geomagnetic field and magnetosphere around the earth has given the place for the ionization of the solar flares trapped by the magnetosphere and interacts with the sun's magnetic field. The ions flow down and filled the earth with water.

Author: e-mail: atcptrivedi@gmail.com

IV. OZONE LAYER

Stratospheric ozone is formed naturally through the interaction of solar ultraviolet (UV) radiation with molecular oxygen (O₂). Ozone absorbs the toxic UV rays with the entry of visible light, it has given the way for the origin of life on the earth.

Theory

I have traced its root in pre-cosmic cosmology and the sun.

The earth is a part of our solar system, which is one unit of the cosmos. The human body is a microcosm inside a macrocosm. All can be searched just like a drop of water in the sea can reveal the character of the ocean I have studied the sun with the naked eyes with my yogic practice otherwise it is impossible to face the sun even for a second with confirmation from Egypt Rosetta granite stone, pyramids of Egypt, Gold plate Grand Canyon North. America, NASA pictures & Veda,

I have observed the nuclear reactions on the sun's surface with blasts and light. The photon and phonon run in a straight way in concentric circles. It has been confirmed from the Sun disc gold plate Grand Canyon and Veda.

The digitally stacked sequence reveals that the photon and phonon running in concentric circles from the sun Grand Canyon Star Trails NASA - March 3, 2013. Scientists are searching the Dark matter, which is not matter. The dark atmosphere is hidden in the interior of the sun, black caters, and sunspots, which explode with blasts and light.

The shock waves are antimagnetic, white, and travel with supersonic speed, and dark matter is an inactive condensed zone of magnetism without movement, just like a waste. The shock waves are 'anti-matter of dark matter, immortal with opposite character. It appears first in the pre-cosmic darkness like the shock waves appear before the earthquake, and activated the dark matter with resonance with blast and light. The photon and phonon are complementary to each other.

The activation of dark matter is the activation of inherent magnetism in the cosmos, with the formation of charged elementary particles. The electrostatic force is the force that governs the motion of the elementary particles, which caused them to aggregate or collide in various ways with oxidation and reduction with the transfer of electrons.

The photon and phonon have a broad complementary spectrum from gamma rays to radio waves with equal and opposite wavelengths. The immortal phonon stimulates the event with electron configuration and half-spin change in the opposite wavelength and the photon undergoes the synthesis and degradation with time Einstein's Equation $E=Mc^2$.

The flow of the photon and photon has been halted with the Higgs field underlying space imparted mass to the elementary particles.

Fig. 1: Higgs field and mass to the elementary particles

All elementary particles are vibrating with the resonance of vibration and their respective charge. They are complementary to each other from gamma rays to radio waves. They find their resonance with resonance. The resonant vibrations of electromagnetic rays, touch, press-mark, and rebound. The colliding protons, decaying into hadron jets and electrons, converted them into electric vibrations to join them in series with phonic compression electromagnetic force. It has maintained its continuity in the molecules and the matter with Higgs field 2013 with asteroids and planets.

V. DISCUSSION

All elementary particles are vibrating with the resonance of vibration and their respective charge. They are complementary to each other from gamma rays to radio waves. They find their resonance with resonance. The phonon touch press mark and rebound with electron configuration and the half spin change in the opposite wavelength, and the photon undergoes the synthesis and degradation with time Einstein's equation $E=Mc^2$

The first life arose in the primordial soup with the streaming movement of the charged ions in the colloidal solution. The respective complementary wavelength of the charged ions caused them to vibrate with streaming

The vibratory movement of the ions with streaming developed a dynamo in the center with actions and interactions in series with electron transfer and the photon undergoes synthesis and degradation with time.

The electron transfer is associated with the oxidation loss of an electron and reduction gain of the electron in anaerobic conditions. The electrostatic interaction between the charged ions developed a dynamo in the center with the electromagnetic field. The vibration waves activated the equal and opposite wavelengths of purine and pyrimidine base differing only in Nitrogen The elementary particles adhered to space, the sound of vibration, touched, press the mark, and

rebound. The colliding protons, decaying into hadron jets and electrons, converted them into electric vibrations to join them in series with electron configuration and half spin change in the opposite wavelength.

The electrostatic interaction between the charged ions of the water with dehydration separated the hydrogen bond. It has formed a covalent Hydrogen bond between the purine and the pyrimidine base.

Fig. 2: Ultra-resolution image of DNA with Electron transfer

The phonon wave strike and rebound with a press mark with the electron configuration in the opposite direction of the hydrogen triple bond, it triggered off the chain of oxidation and reduction reaction, and the hydrogen triple bond is converted into a double bond and Nitrogen reunite it on the other side simultaneously.

The equal and opposite wavelengths of the hydrogen triple bonds led to the development of electron transfer. With the first genetic code and amino acid in series synthesized the chromosomes. The chromosomes are divided into four with the first prokaryotic cell. Life appears with the streaming of protoplasm with the food metabolism as a source of life and disappears with the aging and death of the cell body. The complementary wavelength of the hydrogen triple bond of the nucleotide pair led to the development from generation to generation with new life.

Fig. 3: The nucleotides divide in the air like an image in the mirror with electron transfer

The equal and the opposite wavelength of the hydrogen triple bond led to the development of electron transfer in series and the hydrogen triple converted into a double bond and reunited in the opposite direction simultaneously with Nitrogen in series as the identity of the individual cell with equal and opposite wavelength. Hence, even the time twins have different genetic identities and fates in life.

The prokaryotes evolved into the eukaryotic autotrophic cell with the entry of the red wavelength of light made apparent the three places of nucleotide pair with the photosynthesis and generation of immortal chemical energy. The immortal phonon wave follows the immortal DNA from generation to generation with new life and cell division.

At the point of two different DNA the complementary phonon wave strike and rebound with the generation of triplet code in the air with electron configuration and half spin change in the opposite wavelength.

The complementary wavelength led to the development of vigorously

The triplet genetic code of DNA divides in chains with never breaking Nitrogen

The complementary phonon wavelength acts as an antenna and speaker to execute the functions of life, It led to the development of the synthesis of amino acids and proteins in the chain to synthesize the chromosome pair with the first prokaryote.

The Hydrogen triple bond Nitrogen triple bond with oxidation and reduction separate and unite simultaneously on another side, with oxidation the hydrogen bond break, and Nitrogen reunites it on another side, due to this the double helix chain never break.

VI. RESULT AND CONCLUSION

The entry of the Red wavelength of light through the plasma membrane activated the place of the chlorophyll pigment on the DNA

The first prokaryotic cell with an incipient nucleus maintained its continuity with cell division, and immortal phonons follow it from generation to generation with new life.

The entry of the Red wavelength of light through the plasma membrane activated the place of the chlorophyll pigment on the DNA as a source of life with food metabolism.

It has given double horsepower to the developing cells and the prokaryotic autotrophic cell evolved into the eukaryotic cell and moved on the path of evolution with genetic recombination and cell division with the hereditary characters and the complementary phonon wave following it from generation to generation with new life as a hereditary life principle.

Life appears with the streaming of the protoplasmic vibrations with food metabolism and disappears with the aging of the cell body.

It is like this that all the rotating astronomical bodies rotate at their axis with the generation of the dynamo in the center with the magnetic field and the magnetosphere around them. In the same fashion, the streaming of the protoplasm with the nucleus in the center generates dynamo in the center with a magnetic field and magnetosphere but is hard to detect, which disappears with death, and aging of the cell body.

The purine and the pyrimidine base pair of DNA differing only in Nitrogen have shed from the Nebula with the cosmological event. It divides in the air just like the image in the mirror. The Purine and pyrimidine base

pair of the DNA has an inbuilt mechanism for the transcription and translation with time, with three immortal and three stages of life. The three immortals are, 1- the Higgs field ensign of the existence, 2- the immortal chemical energy of photosynthesis, with food metabolism is the source of life. 3. The immortal DNA with resonant vibrations light of life for all.

ACKNOWLEDGMENT

I am thankful to the Director M. V. ShodhPeeth, Ujjain for their encouragement and to VC Vikram University, Ujjain.
